(54) Title: INHIBITORS OF PRENYL-PROTEIN TRANSFERASE

(57) Abstract: The present invention is directed to compounds which inhibit prenyl-protein transferase (FTase) and the prenylation of the oncogene protein Ras. The invention is further directed to chemotherapeutic compositions containing the compounds of this invention and methods for inhibiting prenyl-protein transferase and the prenylation of the oncogene protein Ras.

TITLE OF THE INVENTION

## INHIBITORS OF PRENYL-PROTEIN TRANSFERASE

BACKGROUND OF THE INVENTION

5           The Ras proteins (Ha-Ras, Ki4a-Ras, Ki4b-Ras and N-Ras) are part of a signalling pathway that links cell surface growth factor receptors to nuclear signals initiating cellular proliferation. Biological and biochemical studies of Ras action indicate that Ras functions like a G-regulatory protein. In the inactive state, Ras is bound to GDP. Upon growth factor receptor activation Ras is induced to exchange  
10       GDP for GTP and undergoes a conformational change. The GTP-bound form of Ras propagates the growth stimulatory signal until the signal is terminated by the intrinsic GTPase activity of Ras, which returns the protein to its inactive GDP bound form (D.R. Lowy and D.M. Willumsen, *Ann. Rev. Biochem.* 62:851-891 (1993)). Mutated *ras* genes (Ha-*ras*, Ki4a-*ras*, Ki4b-*ras* and N-*ras*) are found in many human cancers,  
15       including colorectal carcinoma, exocrine pancreatic carcinoma, and myeloid leukemias. The protein products of these genes are defective in their GTPase activity and constitutively transmit a growth stimulatory signal.

          Ras must be localized to the plasma membrane for both normal and oncogenic functions. At least 3 post-translational modifications are involved with  
20       Ras membrane localization, and all 3 modifications occur at the C-terminus of Ras. The Ras C-terminus contains a sequence motif termed a "CAAX" or "Cys-Aaa<sup>1</sup>-Aaa<sup>2</sup>-Xaa" box (Cys is cysteine, Aaa is an aliphatic amino acid, the Xaa is any amino acid) (Willumsen *et al.*, *Nature* 310:583-586 (1984)). Depending on the specific  
25       sequence, this motif serves as a signal sequence for the enzymes farnesyl-protein transferase or geranylgeranyl-protein transferase, which catalyze the alkylation of the cysteine residue of the CAAX motif with a C15 or C20 isoprenoid, respectively. Such enzymes may be generally termed prenyl-protein transferases. (S. Clarke., *Ann. Rev. Biochem.* 61:355-386 (1992); W.R. Schafer and J. Rine, *Ann. Rev. Genetics* 30:209-237 (1992)). The Ras protein is one of several proteins that are known to  
30       undergo post-translational farnesylation. Other farnesylated proteins include the Ras-related GTP-binding proteins such as Rho, fungal mating factors, the nuclear lamins, and the gamma subunit of transducin. James, et al., *J. Biol. Chem.* 269, 14182 (1994) have identified a peroxisome associated protein Pxf which is also farnesylated.

James, et al., have also suggested that there are farnesylated proteins of unknown structure and function in addition to those listed above.

Inhibition of farnesyl-protein transferase has been shown to block the growth of Ras-transformed cells in soft agar and to modify other aspects of their transformed phenotype. It has also been demonstrated that certain inhibitors of farnesyl-protein transferase selectively block the processing of the Ras oncoprotein intracellularly (N.E. Kohl *et al.*, *Science*, 260:1934-1937 (1993) and G.L. James *et al.*, *Science*, 260:1937-1942 (1993). Recently, it has been shown that an inhibitor of farnesyl-protein transferase blocks the growth of *ras*-dependent tumors in nude mice (N.E. Kohl *et al.*, *Proc. Natl. Acad. Sci U.S.A.*, 91:9141-9145 (1994) and induces regression of mammary and salivary carcinomas in *ras* transgenic mice (N.E. Kohl *et al.*, *Nature Medicine*, 1:792-797 (1995).

Indirect inhibition of farnesyl-protein transferase *in vivo* has been demonstrated with lovastatin (Merck & Co., Rahway, NJ) and compactin (Hancock *et al.*, *ibid*; Casey *et al.*, *ibid*; Schafer *et al.*, *Science* 245:379 (1989)). These drugs inhibit HMG-CoA reductase, the rate limiting enzyme for the production of polyisoprenoids including farnesyl pyrophosphate. Farnesyl-protein transferase utilizes farnesyl pyrophosphate to covalently modify the Cys thiol group of the Ras CAAX box with a farnesyl group (Reiss *et al.*, *Cell*, 62:81-88 (1990); Schaber *et al.*, *J. Biol. Chem.*, 265:14701-14704 (1990); Schafer *et al.*, *Science*, 249:1133-1139 (1990); Manne *et al.*, *Proc. Natl. Acad. Sci USA*, 87:7541-7545 (1990)). Inhibition of farnesyl pyrophosphate biosynthesis by inhibiting HMG-CoA reductase blocks Ras membrane localization in cultured cells. However, direct inhibition of farnesyl-protein transferase would be more specific and attended by fewer side effects than would occur with the required dose of a general inhibitor of isoprene biosynthesis.

Inhibitors of farnesyl-protein transferase (FPTase) have been described in two general classes. The first are analogs of farnesyl diphosphate (FPP), while the second class of inhibitors is related to the protein substrates (e.g., Ras) for the enzyme. The peptide derived inhibitors that have been described are generally cysteine containing molecules that are related to the CAAX motif that is the signal for protein prenylation. (Schaber *et al.*, *ibid*; Reiss *et al.*, *ibid*; Reiss *et al.*, *PNAS*, 88:732-736 (1991)). Such inhibitors may inhibit protein prenylation while serving as alternate substrates for the farnesyl-protein transferase enzyme, or may be purely competitive inhibitors (U.S. Patent 5,141,851, University of Texas; N.E. Kohl *et al.*,

Science, 260:1934-1937 (1993); Graham, et al., *J. Med. Chem.*, 37, 725 (1994)). In general, deletion of the thiol from a CAAX derivative has been shown to dramatically reduce the inhibitory potency of the compound. However, the thiol group potentially places limitations on the therapeutic application of FPTase inhibitors with respect to pharmacokinetics, pharmacodynamics and toxicity. Therefore, a functional replacement for the thiol is desirable.

It has recently been reported that farnesyl-protein transferase inhibitors are inhibitors of proliferation of vascular smooth muscle cells and are therefore useful in the prevention and therapy of arteriosclerosis and diabetic disturbance of blood vessels (JP H7-112930).

It has recently been disclosed that certain tricyclic compounds which optionally incorporate a piperidine moiety are inhibitors of FPTase (WO 95/10514, WO 95/10515 and WO 95/10516). Imidazole-containing inhibitors of farnesyl protein transferase have also been disclosed (WO 95/09001 and EP 0 675 112 A1). It has also been disclosed that certain compounds which incorporate a pyrrolidine moiety are inhibitors of FPTase (WO 97/37900, and U.S. Patent Nos. 5,627,202 and 5,661,161).

It is, therefore, an object of this invention to develop compounds that will inhibit prenyl-protein transferase and thus, the post-translational isoprenylation of proteins. It is a further object of this invention to develop chemotherapeutic compositions containing the compounds of this invention and methods for producing the compounds of this invention.

#### SUMMARY OF THE INVENTION

The present invention comprises structurally-constrained compounds which inhibit prenyl-protein transferases. Further contained in this invention are chemotherapeutic compositions containing these prenyl-protein transferase inhibitors and methods for their production.

The compounds of this invention are illustrated by the formulae A-1, A, B and C:

### DETAILED DESCRIPTION OF THE INVENTION

- 5           The compounds of this invention are useful in the inhibition of prenyl-protein transferase and the prenylation of the oncogene protein Ras. In a first embodiment of this invention, the inhibitors of a prenyl-protein transferase are illustrated by the formula A-1:

10

wherein

$X^1$  is  $(CR^{1a}_2)_n A^1 (CR^{1a}_2)_n$ ;

$X^2$  is  $(CR^{1b})_pA^2(CR^{1b})_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

- 5           a) hydrogen,
- b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- 10          f)  $R^{6a}S(O)_m$ -,
- g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}$ -,
- 15          k)  $(R^{10})_2NC(O)NR^{10}$ -,
- l)  $R^{10}C(O)$ -,
- m)  $-N(R^{10})_2$ ,
- n)  $R^{10}OC(O)$ -,
- o)  $R^{10}OC(O)NR^{10}$ -,
- 20          p) unsubstituted or substituted  $C_1$ - $C_6$  alkyl, wherein the substituent  
on the substituted  $C_1$ - $C_6$  alkyl is selected from unsubstituted or  
substituted aryl, unsubstituted or substituted heterocycle, unsubstituted  
or substituted  $C_3$ - $C_{10}$  cycloalkyl, unsubstituted or substituted  $C_2$ - $C_6$   
alkenyl, unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,  $R^{10}O$ -,  $R^{6a}S(O)_m$ ,  
25          halo,  $C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}$ -,  $(R^{10})_2NC(O)NR^{10}$ -,  $R^{10}C(O)$ -,  
 $-N(R^{10})_2$ ,  $R^{10}OC(O)$ -, and  $R^{10}OC(O)NR^{10}$ ;

$A^1$  and  $A^2$  are independently selected from:

- 30           a) a bond,
- b) O,
- c)  $C=O$ ,
- d)  $S(O)_m$ ,
- e)  $NR^{10}$ ,
- f)  $C(O)NR^{10}$ ,

- g)  $\text{NR}^{10}\text{C}(\text{O})$ ,
- h)  $\text{OC}(\text{O})$ , and
- i)  $\text{C}(\text{O})\text{O}$ ;

5  $\text{R}^2$  is independently selected from

- a) hydrogen,
- b)  $\text{CN}$ ;
- c)  $\text{NO}_2$ ,
- d) halogen,
- 10 e) aryl, unsubstituted or substituted,
- f) heterocycle, unsubstituted or substituted,
- g)  $\text{C}_1\text{-C}_6$  alkyl, unsubstituted or substituted,
- h)  $\text{OR}^{10}$ ,
- i)  $\text{N}_3$ ,
- 15 j)  $\text{R}^{6a}\text{S}(\text{O})_m$ ,
- k)  $\text{C}_3\text{-C}_{10}$  cycloalkyl, unsubstituted or substituted,
- l)  $\text{C}_2\text{-C}_6$  alkenyl, unsubstituted or substituted,
- m)  $\text{C}_2\text{-C}_6$  alkynyl, unsubstituted or substituted,
- n)  $(\text{R}^{10})_2\text{NC}(\text{O})\text{NR}^{10-}$ ,
- 20 o)  $\text{R}^{10}\text{C}(\text{O})-$ ,
- p)  $\text{R}^{10}\text{C}(\text{O})\text{NR}^{10-}$ ,
- q)  $\text{R}^{10}\text{OC}(\text{O})-$ ,
- r)  $-\text{N}(\text{R}^{10})_2$ , and
- s)  $\text{R}^{10}\text{OC}(\text{O})\text{NR}^{10-}$ ;

25

$\text{R}^3$  is independently selected from:

- a) hydrogen,
- b) halo,
- c)  $\text{C}_1\text{-C}_6$  alkyl, unsubstituted or substituted,
- 30 d)  $\text{CN}$ ,
- e)  $\text{NO}_2$ ,
- f) aryl, unsubstituted or substituted,
- g) heterocycle, unsubstituted or substituted,
- h)  $\text{OR}^{10}$ ,

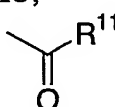

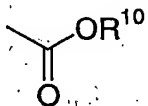

- 5
- i)  $R^{6a}S(O)_m$ ,
  - j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
  - k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
  - l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
  - m)  $(R^{10})_2NC(O)NR^{10}$ -,
  - n)  $R^{10}C(O)$ -, and
  - o)  $R^{10}C(O)NR^{10}$ -;

$R^4$  is independently selected from:

- 10
- a) hydrogen,
  - b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
  - c) aryl, unsubstituted or substituted,
  - d) heterocycle, unsubstituted or substituted, and
  - e) aralkyl, unsubstituted or substituted;

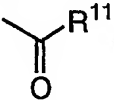

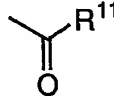

15  $R^6$  and  $R^7$  are independently selected from:

H,  $C_1-C_6$  alkyl,  $C_3-C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1-C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- 20
- a)  $C_1-C_6$  alkoxy,
  - b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,
  - c) halogen,
  - d) HO,
  - e) 
  - f) 
  - g)  $-S(O)_mR^{6a}$ , and
  - h)  $N(R^{10})_2$ ; or
- 25

$R^6$  and  $R^7$  may be joined in a ring;

$R^{6a}$  is independently selected from:

- a) C<sub>3-6</sub> cycloalkyl, heterocycle, aryl, unsubstituted or substituted with  
 5 one or more of the following:  
 1) C<sub>1-4</sub> alkoxy,  
 2) aryl or heterocycle,  
 3) halogen,  
 4) HO,  
 5)   
 10 6) SO<sub>2</sub>R<sup>11</sup>,  
 7) N(R<sup>10</sup>)<sub>2</sub>; and  
 b) C<sub>1-6</sub> alkyl, unsubstituted or substituted with one or more of the  
 following:  
 15 1) -C<sub>1-4</sub> alkoxy,  
 2) aryl or heterocycle,  
 3) halogen,  
 4) -OH,  
 5)  and  
 20 6) -N(R<sup>10</sup>)<sub>2</sub>;

$R^8$  is independently selected from:

- a) hydrogen,  
 b) unsubstituted or substituted C<sub>2-6</sub> alkenyl,  
 25 c) unsubstituted or substituted C<sub>2-6</sub> alkynyl,  
 d) unsubstituted or substituted C<sub>3-10</sub> cycloalkyl,  
 e) unsubstituted or substituted C<sub>1-4</sub> perfluoroalkyl,  
 f) halo,  
 g) R<sup>10</sup>O-,  
 30 h) CN,  
 i) R<sup>6a</sup>S(O)<sub>m</sub>-,

 q)  $\text{N}_3$ ,  
 r)  $-\text{N}(\text{R}^{10})_2$ , and  
 10 s)  $\text{C}_1-\text{C}_6$  alkyl, unsubstituted or substituted by  $\text{C}_1-\text{C}_4$  perfluoroalkyl,  
 $\text{F}$ ,  $\text{Cl}$ ,  $\text{Br}$ ,  $\text{R}^{10}\text{O}-$ ,  $\text{R}^{6a}\text{S}(\text{O})_m-$ ,  $-\text{C}(\text{O})\text{NR}^6\text{R}^7$ ,  $\text{R}^{10}\text{C}(\text{O})\text{NR}^{10}-$ ,  $\text{CN}$ ,  
 $(\text{R}^{10})_2\text{NC}(\text{O})\text{NR}^{10}-$ ,  $\text{R}^{10}\text{C}(\text{O})-$ ,  $\text{R}^{10}\text{OC}(\text{O})-$ ,  $\text{N}_3$ ,  $-\text{N}(\text{R}^{10})_2$ , and  
 $\text{R}^{10}\text{OC}(\text{O})\text{NR}^{10}-$ ;

15  $\text{R}^{10}$  is independently selected from:

- a) hydrogen,  
 b) unsubstituted or substituted  $\text{C}_1-\text{C}_6$  alkyl,  
 c)  $\text{C}_3-\text{C}_6$  cycloalkyl,  
 d)  $\text{C}_1-\text{C}_6$  perfluoroalkyl,  
 20 e) trifluoromethyl,  
 f) 2,2,2-trifluoroethyl,  
 g) unsubstituted or substituted heteroaryl,  
 h) unsubstituted or substituted aryl,  
 i) unsubstituted or substituted aralkyl, and  
 25 j) unsubstituted or substituted heteroaralkyl;

$\text{R}^{11}$  is independently selected from

- a) unsubstituted or substituted  $\text{C}_1-\text{C}_6$  alkyl,  
 b) unsubstituted or substituted aralkyl,  
 30 c) unsubstituted or substituted heterocycle,  
 d) unsubstituted or substituted aryl, and  
 e) unsubstituted or substituted heteroaralkyl;

$G^1$  and  $G^2$  are independently selected from  $CH_2$  or oxygen, provided at least one is oxygen;

J is  $CH_2$ , NH or oxygen;

5

M is  $CH_2$ , NH,  $S(O)_m$ , or oxygen;

V is selected from:

- 10      a) hydrogen,  
        b) heterocycle,  
        c) aryl,  
        d)  $C_1$ - $C_{20}$  alkyl wherein from 0 to 4 carbon atoms are replaced with a  
              heteroatom selected from O,  $S(O)_m$ , and N, and  
        e)  $C_2$ - $C_{20}$  alkenyl,  
 15      provided that V is not hydrogen if  $A^1$  is  $S(O)_m$  and n is 0;

W is a heterocycle;

Z is  $C(O)$  or  $CH_2$ ;

20

- m is 0, 1 or 2;  
        n is 0, 1, 2, 3, 4, 5 or 6;  
        p is 0, 1, 2, 3, 4, 5 or 6;  
        r is 0 to 5, provided that r is 0 when V is hydrogen;  
 25      s is 0, 1, 2, 3 or 4;  
        t is 0, 1, 2, 3, or 4;  
        v is 0, 1, 2, or 3;  
        w is 0, 1, or 2; and  
        z is 0 or 1;

30

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

Another embodiment of the compounds of this invention is illustrated by formula A:

wherein

$X^1$  is  $(CR^{1a})_n A^1 (CR^{1a})_n$ ;

5

$X^2$  is  $(CR^{1b})_p A^2 (CR^{1b})_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

- a) hydrogen,
- 10 b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- f)  $R^{6a}S(O)_m$ -,
- 15 g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}$ -,

- 20 n)  $R^{10}C(O)-$ , and
- o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- a) hydrogen,
- 25 b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- c) aryl, unsubstituted or substituted,
- d) heterocycle, unsubstituted or substituted, and
- e) aralkyl, unsubstituted or substituted;

30  $R^6$  and  $R^7$  are independently selected from:

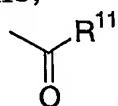

H,  $C_1-C_6$  alkyl,  $C_3-C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1-C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

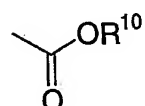

- a)  $C_1-C_6$  alkoxy,

b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,

c) halogen,

d) HO,

e) 

f) 

g)  $-\text{S}(\text{O})_m\text{R}^{6a}$ , and

h)  $\text{N}(\text{R}^{10})_2$ ; or

$\text{R}^6$  and  $\text{R}^7$  may be joined in a ring;

$\text{R}^{6a}$  is independently selected from:

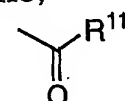

a) C3-6 cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:

1) C1-4 alkoxy,

2) aryl or heterocycle,

3) halogen,

4) HO,

5) 

6)  $\text{SO}_2\text{R}^{11}$ ,

7)  $\text{N}(\text{R}^{10})_2$ ; and

b) C1-C6 alkyl, unsubstituted or substituted with one or more of the following:

1) -C1-4 alkoxy,

2) aryl or heterocycle,

3) halogen,

4) -OH,

and

$R^8$  is independently selected from:

- 5 a) hydrogen,
  - b) unsubstituted or substituted  $C_2-C_6$  alkenyl,
  - c) unsubstituted or substituted  $C_2-C_6$  alkynyl,
  - d) unsubstituted or substituted  $C_3-C_{10}$  cycloalkyl,
  - e) unsubstituted or substituted  $C_1-C_4$  perfluoroalkyl,
  - 10 f) halo,
  - g)  $R^{10}O-$ ,
  - h)  $CN$ ,
  - i)  $R^{6a}S(O)_m-$ ,
  - j)  $-C(O)NR^6R^7$ ,

$R^{10}$  is independently selected from:

- 30 a) hydrogen,
- b) unsubstituted or substituted  $C_1-C_6$  alkyl,
- c)  $C_3-C_6$  cycloalkyl,
- d)  $C_1-C_6$  perfluoroalkyl,

- 5
- e) trifluoromethyl,
  - f) 2,2,2-trifluoroethyl,
  - g) unsubstituted or substituted heteroaryl,
  - h) unsubstituted or substituted aryl,
  - i) unsubstituted or substituted aralkyl, and
  - j) unsubstituted or substituted heteroaralkyl;

$R^{11}$  is independently selected from

- 10
- a) unsubstituted or substituted  $C_1-C_6$  alkyl,
  - b) unsubstituted or substituted aralkyl,
  - c) unsubstituted or substituted heterocycle,
  - d) unsubstituted or substituted aryl, and
  - e) unsubstituted or substituted heteroaralkyl;

- 15  $G^1$  and  $G^2$  are independently selected from  $CH_2$  or oxygen, provided at least one is oxygen;

J is  $CH_2$ , NH or oxygen;

- 20 M is  $CH_2$ , NH,  $S(O)_m$ , or oxygen;

V is selected from:

- 25
- a) hydrogen,
  - b) heterocycle,
  - c) aryl,
  - d)  $C_1-C_{20}$  alkyl wherein from 0 to 4 carbon atoms are replaced with a heteroatom selected from O,  $S(O)_m$ , and N, and
  - e)  $C_2-C_{20}$  alkenyl,

provided that V is not hydrogen if  $A^1$  is  $S(O)_m$  and n is 0;

30

W is a heterocycle;

m is 0, 1 or 2;

n is 0, 1, 2, 3, 4, 5 or 6;

- p is 0, 1, 2, 3, 4, 5 or 6;  
 r is 0 to 5, provided that r is 0 when V is hydrogen;  
 s is 0, 1, 2, 3 or 4;  
 t is 0, 1, 2, 3, or 4;  
 5 v is 0, 1, 2, or 3;  
 w is 0, 1, or 2; and  
 z is 0 or 1;

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

10

Another embodiment of the compounds of this invention is illustrated by formula A:

wherein

15

$X^1$  is  $(CR^{1a}_2)_n A^1 (CR^{1a}_2)_n$ ;

$X^2$  is  $(CR^{1b}_2)_p A^2 (CR^{1b}_2)_p$ ;

20  $R^{1a}$  and  $R^{1b}$  are independently selected from:

- a) hydrogen,
- b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,

- 5 e)  $R^{10}O-$ ,

- 20 c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- f)  $R^{6a}S(O)_m$ -,
- g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,

- h) unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub> alkynyl,  
 i) -C(O)NR<sup>6</sup>R<sup>7</sup>,  
 j) R<sup>10</sup>C(O)NR<sup>10</sup>-,  
 k) (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-,  
 5 l) R<sup>10</sup>C(O)-,  
 m) -N(R<sup>10</sup>)<sub>2</sub>,  
 n) R<sup>10</sup>OC(O)-,  
 o) R<sup>10</sup>OC(O)NR<sup>10</sup>-,  
 p) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl, wherein the substituent  
 10 on the substituted C<sub>1</sub>-C<sub>6</sub> alkyl is selected from unsubstituted or  
 substituted aryl, unsubstituted or substituted heterocycle, unsubstituted  
 or substituted C<sub>3</sub>-C<sub>10</sub> cycloalkyl, unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub>  
 alkenyl, unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub> alkynyl, R<sup>10</sup>O-, R<sup>6a</sup>S(O)<sub>m</sub>,  
 halo, C(O)NR<sup>6</sup>R<sup>7</sup>, R<sup>10</sup>C(O)NR<sup>10</sup>-, (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-, R<sup>10</sup>C(O)-,  
 15 -N(R<sup>10</sup>)<sub>2</sub>, R<sup>10</sup>OC(O)-, and R<sup>10</sup>OC(O)NR<sup>10</sup>-;

A<sup>1</sup> and A<sup>2</sup> are independently selected from:

- a) a bond,  
 b) O,  
 20 c) C=O,  
 d) S(O)<sub>m</sub>, and  
 e) NR<sup>10</sup>;

R<sup>2</sup> is independently selected from

- 25 a) hydrogen,  
 b) CN,  
 c) NO<sub>2</sub>,  
 d) halogen,  
 e) aryl, unsubstituted or substituted,  
 30 f) heterocycle, unsubstituted or substituted,  
 g) C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted,  
 h) OR<sup>10</sup>,  
 i) N<sub>3</sub>,  
 j) R<sup>6a</sup>S(O)<sub>m</sub>,

- k)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
- l)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
- m)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
- n)  $(R^{10})_2NC(O)NR^{10}-$ ,
- 5 o)  $R^{10}C(O)-$ ,
- p)  $R^{10}C(O)NR^{10}-$ ,
- q)  $R^{10}OC(O)-$ ,
- r)  $-N(R^{10})_2$ , and
- s)  $R^{10}OC(O)NR^{10}-$ ;

10

$R^3$  is independently selected from:

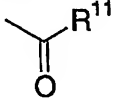

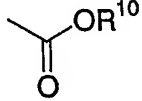

- a) hydrogen,
- b) halo,
- c)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- 15 d) CN,
- e)  $NO_2$ ,
- f) aryl, unsubstituted or substituted,
- g) heterocycle, unsubstituted or substituted,
- h)  $OR^{10}$ ,
- 20 i)  $R^{6a}S(O)_m$ ,
- j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
- k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
- l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
- m)  $(R^{10})_2NC(O)NR^{10}-$ ,
- 25 n)  $R^{10}C(O)-$ , and
- o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- a) hydrogen,
- 30 b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- c) aryl, unsubstituted or substituted,
- d) heterocycle, unsubstituted or substituted, and
- e) aralkyl, unsubstituted or substituted;

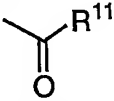

$R^6$  and  $R^7$  are independently selected from:

H,  $C_1-C_6$  alkyl,  $C_3-C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1-C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- 5 a)  $C_1-C_6$  alkoxy,  
 b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,  
 c) halogen,  
 d) HO,  
 e)   
 f)   
 10 g)  $-S(O)_mR^{6a}$ , and  
 h)  $N(R^{10})_2$ ; or

$R^6$  and  $R^7$  may be joined in a ring;

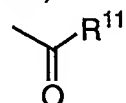

15  $R^{6a}$  is independently selected from:

- a)  $C_3-6$  cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:  
 1)  $C_1-4$  alkoxy,  
 2) aryl or heterocycle,  
 20 3) halogen,  
 4) HO,  
 5)   
 6)  $SO_2R^{11}$ ,  
 7)  $N(R^{10})_2$ ; and  
 25 b)  $C_1-C_6$  alkyl, unsubstituted or substituted with one or more of the following:  
 1)  $-C_1-4$  alkoxy,

2) aryl or heterocycle,

3) halogen,

4) -OH,

5) 

and

5

6) -N(R<sup>10</sup>)<sub>2</sub>;

R<sup>8</sup> is independently selected from:

- 10
- a) hydrogen,
  - b) unsubstituted or substituted C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl,
  - c) halo,
  - d) R<sup>10</sup> O-, and
  - e) C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted by C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl,
- 15
- F, Cl, Br, R<sup>10</sup>O-, R<sup>6a</sup>S(O)<sub>m</sub>-, -C(O)NR<sup>6</sup>R<sup>7</sup>, R<sup>10</sup>C(O)NR<sup>10</sup>-, CN, (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-, R<sup>10</sup>C(O)-, R<sup>10</sup>OC(O)-, N<sub>3</sub>, -N(R<sup>10</sup>)<sub>2</sub>, and R<sup>10</sup>OC(O)NR<sup>10</sup>-;

R<sup>10</sup> is independently selected from:

- 20
- a) hydrogen,
  - b) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
  - c) C<sub>3</sub>-C<sub>6</sub> cycloalkyl,
  - d) C<sub>1</sub>-C<sub>6</sub> perfluoroalkyl,
  - e) trifluoromethyl,
  - f) 2,2,2-trifluoroethyl,
  - g) unsubstituted or substituted heteroaryl,
- 25
- h) unsubstituted or substituted aryl,
  - i) unsubstituted or substituted aralkyl, and
  - j) unsubstituted or substituted heteroaralkyl;

R<sup>11</sup> is independently selected from

- 30
- a) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
  - b) unsubstituted or substituted aralkyl,
  - c) unsubstituted or substituted heterocycle,
  - d) unsubstituted or substituted aryl, and

e) unsubstituted or substituted heteroaralkyl;

G<sup>1</sup> and G<sup>2</sup> are independently selected from CH<sub>2</sub> or oxygen, provided at least one is oxygen;

5

J is CH<sub>2</sub> or oxygen;

M is CH<sub>2</sub>, S(O)<sub>m</sub> or oxygen;

10 W is a heterocycle selected from pyrrolidinyl, imidazolyl, pyridinyl, and thiazolyl;

m is 0, 1 or 2;

n is 0, 1, 2, 3, 4, 5 or 6;

p is 0, 1, 2, 3, 4, 5 or 6;

15 r is 0 to 5;

s is 0, 1, 2, 3 or 4;

t is 0, 1, 2, or 3;

w is 0, 1, or 2; and

z is 0 or 1;

20

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

Another embodiment of the compounds of this invention is illustrated by formula C:

wherein

X<sup>1</sup> is (CR<sup>1a</sup><sub>2</sub>)<sub>n</sub>A<sup>1</sup>(CR<sup>1a</sup><sub>2</sub>)<sub>n</sub>;

5

X<sup>2</sup> is (CR<sup>1b</sup><sub>2</sub>)<sub>p</sub>A<sup>2</sup>(CR<sup>1b</sup><sub>2</sub>)<sub>p</sub>;

R<sup>1a</sup> and R<sup>1b</sup> are independently selected from:

- a) hydrogen,
- 10 b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted C<sub>3</sub>-C<sub>10</sub> cycloalkyl,
- e) R<sup>10</sup>O-,
- f) R<sup>6a</sup>S(O)<sub>m</sub>-,

R<sup>4</sup> is independently selected from:

- 20 a) hydrogen,
- b) C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted,
- c) aryl, unsubstituted or substituted,
- d) heterocycle, unsubstituted or substituted, and
- e) aralkyl, unsubstituted or substituted;

25

R<sup>6</sup> and R<sup>7</sup> are independently selected from:

H, C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl, C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- 30 a) C<sub>1</sub>-C<sub>6</sub> alkoxy,
- b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,
- c) halogen,
- d) HO,

$\text{R}^6$  and  $\text{R}^7$  may be joined in a ring;

5

$\text{R}^{6a}$  is independently selected from:

a)  $\text{C}_3$ - $\text{C}_6$  cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:

- 1)  $\text{C}_{1-4}$  alkoxy,
- 2) aryl or heterocycle,
- 3) halogen,
- 4)  $\text{HO}$ ,

10

15

b)  $\text{C}_1$ - $\text{C}_6$  alkyl, unsubstituted or substituted with one or more of the following:

- 1)  $-\text{C}_{1-4}$  alkoxy,
- 2) aryl or heterocycle,
- 3) halogen,
- 4)  $-\text{OH}$ ,

20

and

25  $\text{R}^8$  is independently selected from:

- 5
- a) hydrogen,
  - b) unsubstituted or substituted C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl,
  - c) halo,
  - d) R<sup>10</sup> O-, and
  - e) C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted by C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl, F, Cl, Br, R<sup>10</sup> O-, R<sup>6a</sup> S(O)<sub>m</sub>-, -C(O)NR<sup>6</sup>R<sup>7</sup>, R<sup>10</sup>C(O)NR<sup>10</sup>-, CN, (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-, R<sup>10</sup>C(O)-, R<sup>10</sup>OC(O)-, N<sub>3</sub>-, N(R<sup>10</sup>)<sub>2</sub>, and R<sup>10</sup>OC(O)NR<sup>10</sup>-;

10 R<sup>10</sup> is independently selected from:

- 15
- a) hydrogen,
  - b) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
  - c) C<sub>3</sub>-C<sub>6</sub> cycloalkyl,
  - d) C<sub>1</sub>-C<sub>6</sub> perfluoroalkyl,
  - e) trifluoromethyl,
  - f) 2,2,2-trifluoroethyl,
  - g) unsubstituted or substituted heteroaryl,
  - h) unsubstituted or substituted aryl,
  - i) unsubstituted or substituted aralkyl, and
  - 20 j) unsubstituted or substituted heteroaralkyl;

R<sup>11</sup> is independently selected from

- 25
- a) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
  - b) unsubstituted or substituted aralkyl,
  - c) unsubstituted or substituted heterocycle,
  - d) unsubstituted or substituted aryl, and
  - e) unsubstituted or substituted heteroaralkyl;

30 G<sup>1</sup> and G<sup>2</sup> are independently selected from CH<sub>2</sub> or oxygen, provided at least one is oxygen;

J is CH<sub>2</sub> or oxygen;

M is CH<sub>2</sub>, S(O)<sub>m</sub> or oxygen;

- m is 0, 1 or 2;  
 n is 0, 1, 2, 3, 4, 5 or 6;  
 p is 0, 1, 2, 3, 4, 5 or 6;  
 5 r is 0 to 5;  
 s is 0, 1, 2, 3 or 4;  
 t is 0, 1, 2, or 3;  
 w is 0, 1, or 2; and  
 z is 0 or 1;

10

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

Specific examples of the compounds of the instant invention are:

- 15 (+/-)-4-{4-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile

- 20 (+/-)-4-{4-{2-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-yl)ethyl}-2-methylimidazol-1-ylmethyl}benzonitrile

(+/-)-4-{4-(5'-chloro-spiro[indan-1,5'-oxazolidine]-2-on-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile

5 (+/-)-4-{4-(5'-fluoro-spiro[imidazolidine-4,1'-indan]-2,5-dion-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

- 10 The compounds of the present invention may have asymmetric centers and occur as racemates, racemic mixtures, and as individual diastereomers, with all possible isomers, including optical isomers, being included in the present invention. When any variable, term or substituent (e.g. aryl, heterocycle, n, R<sup>1a</sup>, etc.) occurs more than one time in any formula or generic structure, its definition on each
- 15 occurrence is independent from the definition at every other occurrence. Also, combinations of substituents/or variables are permissible only if such combinations result in stable compounds.

- As used herein, "alkyl" is intended to include both branched and straight-chain saturated aliphatic hydrocarbon groups having 1 to 6 carbon atoms,
- 20 unless otherwise specified; "alkoxy" represents an alkyl group having 1 to 4 carbon atoms, unless otherwise indicated, attached through an oxygen bridge. "Halogen" or "halo" as used herein means fluoro, chloro, bromo and iodo. "Cycloalkyl" as used herein is intended to include non-aromatic cyclic hydrocarbon groups, having the

specified number of carbon atoms, which may or may not be bridged or structurally constrained. Examples of such cycloalkyls include, but are not limited to, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, adamantyl, cyclooctyl, cycloheptyl, and the like.

5                   If no number of carbon atoms is specified, the term "alkenyl" refers to a non-aromatic hydrocarbon, straight, branched or cyclic, containing from 2 to 10 carbon atoms and at least one carbon to carbon double bond. Preferably one carbon to carbon double bond is present, and up to four non-aromatic carbon-carbon double bonds may be present. Thus, "C<sub>2</sub>-C<sub>6</sub> alkenyl" means an alkenyl radical having from  
10 2 to 6 carbon atoms. Examples of such alkenyl groups include, but are not limited to, ethenyl, propenyl, butenyl and cyclohexenyl. As described above with respect to alkyl, the straight, branched or cyclic portion of the alkenyl group may contain double bonds and may be substituted if a substituted alkenyl group is indicated.

                  The term "alkynyl" refers to a hydrocarbon radical straight, branched  
15 or cyclic, containing from 2 to 10 carbon atoms and at least one carbon to carbon triple bond. Up to three carbon-carbon triple bonds may be present. Thus, "C<sub>2</sub>-C<sub>6</sub> alkynyl" means an alkynyl radical having from 2 to 6 carbon atoms. Examples of such alkynyl groups include, but are not limited to, ethynyl, propynyl and butynyl. As described above with respect to alkyl, the straight, branched or cyclic portion of  
20 the alkynyl group may contain triple bonds and may be substituted if a substituted alkynyl group is indicated.

                  As used herein, "aryl" is intended to mean any stable monocyclic, bicyclic or tricyclic carbon ring of up to 7 members in each ring, wherein at least one ring is aromatic. Examples of such aryl elements include, but are not limited to,  
25 to, phenyl, naphthyl, tetrahydronaphthyl, indanyl, indanonyl, biphenyl, tetralinyl, tetralonyl, fluorenyl, phenanthryl, anthryl or acenaphthyl.

                  As used herein, "aralkyl" is intended to mean an aryl moiety, as defined above, attached through a C<sub>1</sub>-C<sub>6</sub> alkyl linker, where alkyl is defined above. Examples of aralkyls include, but are not limited to, benzyl, naphthylmethyl and  
30 phenylbutyl.

                  The term heterocycle or heterocyclic, as used herein, represents a stable 5- to 7-membered monocyclic or stable 8- to 11-membered bicyclic heterocyclic ring which is either saturated or unsaturated, and which consists of carbon atoms and from one to four heteroatoms selected from the group consisting of N,

- O, and S, and including any bicyclic group in which any of the above-defined heterocyclic rings is fused to a benzene ring. The heterocyclic ring may be attached at any heteroatom or carbon atom which results in the creation of a stable structure. Examples of such heterocyclic elements include, but are not limited to, azepinyl,
- 5 benzimidazolyl, benzisoxazolyl, benzofuranyl, benzofurazanyl, benzopyranyl, benzothiopyranyl, benzofuryl, benzothiazolyl, benzothienyl, benzoxazolyl, benzopyrazolyl, benzotriazolyl, chromanyl, cinnolinyl, dibenzofuranyl, dihydrobenzofuryl, dihydrobenzothienyl, dihydrobenzothiopyranyl, dihydrobenzothiopyranyl sulfone, furyl, furanyl, imidazolidinyl, imidazolyl,
- 10 imidazolyl, indolinyl, indolyl, isochromanyl, isoindolinyl, isoquinolinyl, isothiazolidinyl, isothiazolyl, morpholinyl, naphthyridinyl, oxadiazolyl, 2-oxoazepinyl, 4-oxonaphthyridinyl, 2-oxopiperazinyl, 2-oxopiperdinyl, 2-oxopyrrolidinyl, 2-oxopyridyl, 2-oxoquinolinyl, piperidyl, piperazinyl, pyrazinyl, pyrazolidinyl, pyrazolyl, pyridazinyl, pyridinyl, pyridyl, pyrimidinyl, pyrimidyl,
- 15 pyrrolidinyl, pyrrolyl, quinazolinyl, quinolinyl, quinoxalinyl, tetrahydrofuranyl, tetrahydrofuryl, tetrahydroimidazopyridinyl, tetrahydroisoquinolinyl, tetrahydroquinolinyl, thiamorpholinyl, thiamorpholinyl sulfoxide, thiazolyl, thiazolinyl, thienofuryl, thienothienyl, thienyl and triazolyl. Preferably, heterocycle or heterocyclic is not tetrazolyl.
- 20 As used herein, "heteroaryl" is intended to mean any stable monocyclic or bicyclic carbon ring of up to 7 members in each ring, wherein at least one ring is aromatic and wherein from one to four carbon atoms are replaced by heteroatoms selected from the group consisting of N, O, and S. Examples of such heteroaryl elements include, but are not limited to, azepinyl, benzimidazolyl, benzisoxazolyl,
- 25 benzofuranyl, benzofurazanyl, benzopyranyl, benzopyrazolyl, benzothiopyranyl, benzofuryl, benzothiazolyl, benzothienyl, benzotriazolyl, benzoxazolyl, chromanyl, cinnolinyl, dihydrobenzofuryl, dihydrobenzothienyl, dihydrobenzothiopyranyl, dihydrobenzothiopyranyl sulfone, furanyl, furyl, imidazolyl, indolinyl, indolyl, isochromanyl, isoindolinyl, isoquinolinyl, isothiazolyl, naphthyridinyl, oxadiazolyl,
- 30 pyrazinyl, pyrazolyl, pyridazinyl, pyridinyl, pyridyl, pyrimidinyl, pyrimidyl, pyrrolyl, quinazolinyl, quinolinyl, quinoxalinyl, tetrahydroimidazopyridinyl, tetrahydroisoquinolinyl, tetrahydroquinolinyl, thiazolyl, thienofuryl, thienothienyl, thienyl and triazolyl.

As used herein, "heteroaralkyl" is intended to mean a heteroaryl moiety, as defined above, attached through a C<sub>1</sub>-C<sub>6</sub> alkyl linker, where alkyl is defined above. Examples of heteroaralkyls include, but are not limited to, 2-pyridylmethyl, 2-morpholinylethyl, 2-imidazolylethyl, 2-quinolinylmethyl, 2-imidazolylmethyl, 1-piperazineethyl, and the like.

As used herein, the terms "substituted alkyl", "substituted alkenyl", "substituted alkynyl" and "substituted alkoxy" are intended to include the branch or straight-chain alkyl group of the specified number of carbon atoms, wherein the carbon atoms may be substituted with F, Cl, Br, I, CF<sub>3</sub>, OCF<sub>3</sub>, N<sub>3</sub>, NO<sub>2</sub>, NH<sub>2</sub>, oxo, OH, -O(C<sub>1</sub>-C<sub>6</sub> alkyl), S(O)<sub>0-2</sub>, (C<sub>1</sub>-C<sub>6</sub> alkyl)S(O)<sub>0-2</sub>, C<sub>2</sub>-C<sub>6</sub> alkenyl, C<sub>2</sub>-C<sub>6</sub> alkynyl, -(C<sub>1</sub>-C<sub>6</sub> alkyl)S(O)<sub>0-2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), C<sub>3</sub>-C<sub>20</sub> cycloalkyl, C<sub>2</sub>-C<sub>6</sub> alkenyl, C<sub>2</sub>-C<sub>6</sub> alkynyl, -C(O)NH, (C<sub>1</sub>-C<sub>6</sub> alkyl)C(O)NH-, H<sub>2</sub>N-CH(NH)-, H<sub>2</sub>NC(O)NH-(C<sub>1</sub>-C<sub>6</sub> alkyl)C(O)-, -O(C<sub>1</sub>-C<sub>6</sub> alkyl)CF<sub>3</sub>, (C<sub>1</sub>-C<sub>6</sub> alkyl)OC(O)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)O(C<sub>1</sub>-C<sub>6</sub> alkyl)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)C(O)<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)OC(O)NH-, aryl, benzyl, heterocycle, aralkyl, heteroaralkyl, halo-aryl, halo-benzyl, halo-heterocycle, cyano-aryl, cyano-benzyl and cyano-heterocycle.

As used herein, the terms "substituted aryl", "substituted heterocycle", "substituted heteroaryl", "substituted cycloalkyl", "substituted benzyl", "substituted aralkyl" and "substituted heteroaralkyl" are intended to include the cyclic group containing from 1 to 3 substituents in addition to the point of attachment to the rest of the compound. Such substituents are preferably selected from the group which includes but is not limited to F, Cl, Br, I, CF<sub>3</sub>, OCF<sub>3</sub>, NH<sub>2</sub>, N(C<sub>1</sub>-C<sub>6</sub> alkyl)<sub>2</sub>, NO<sub>2</sub>, CN, N<sub>3</sub>, C<sub>1</sub>-C<sub>20</sub> alkyl, C<sub>1</sub>-C<sub>6</sub> alkoxy, C<sub>3</sub>-C<sub>20</sub> cycloalkyl, -OH, -O(C<sub>1</sub>-C<sub>6</sub> alkyl), S(O)<sub>0-2</sub>, (C<sub>1</sub>-C<sub>6</sub> alkyl)S(O)<sub>0-2</sub>, (C<sub>1</sub>-C<sub>6</sub> alkyl)S(O)<sub>0-2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)C(O)NH-, H<sub>2</sub>NC(O)NH-, H<sub>2</sub>N-CH(NH)-, H<sub>2</sub>N-C(O)NH-, (C<sub>1</sub>-C<sub>6</sub> alkyl)C(O)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)OC(O)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)O(C<sub>1</sub>-C<sub>6</sub> alkyl)-, (C<sub>1</sub>-C<sub>6</sub>)C(O)<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl)-, (C<sub>1</sub>-C<sub>6</sub> alkyl)OC(O)NH-, aryl, aralkyl, heteroaryl, heteroaralkyl, halo-aryl, halo-aralkyl, halo-heterocycle, halo-heteroaralkyl, cyano-aryl, cyano-aralkyl, cyano-heterocycle and cyano-heteroaralkyl.

Examples of the ring structures which may be formed when R<sup>6</sup> and R<sup>7</sup> are joined include, but are not limited to

As used herein, examples of "C<sub>3</sub> - C<sub>20</sub> cycloalkyl" may include, but are not limited to:

5

Lines drawn into the ring systems from substituents (such as from R<sup>3</sup>, R<sup>4</sup>, etc.) indicate that the indicated bond may be attached to any of the substitutable ring carbon atoms or heteroatoms.

10 Preferably, R<sup>1a</sup> and R<sup>1b</sup> are independently selected from H, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl, R<sup>10</sup>O-, unsubstituted or substituted aryl, unsubstituted or substituted heterocycle. More preferably R<sup>1a</sup> and R<sup>1b</sup> are independently selected from H, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl or R<sup>10</sup>O-.

15 Preferably, R<sup>2</sup> is independently selected from hydrogen, -OR<sup>10</sup>, CN, unsubstituted or substituted aryl and halogen. Most preferably, r is 1 to 3 and at least one R<sup>2</sup> is CN.

Preferably, R<sup>3</sup> is independently selected from H, halo, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl.

20 Preferably, R<sup>4</sup> is independently selected from H, unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted aralkyl.

Preferably, R<sup>8</sup> is independently selected from H or unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl.

Preferably, J is NH or oxygen.

Preferably, M is CH<sub>2</sub>, S(O)<sub>m</sub> or oxygen.

Preferably, V is aryl, heterocycle or C<sub>1</sub>-C<sub>20</sub> alkyl. More preferably, V is aryl. Most preferably, V is phenyl.

5 Preferably, W is a heterocycle selected from pyrrolidinyl, imidazolyl, pyridinyl, thiazolyl, 2-oxopiperidinyl, quinolinyl, isoquinolinyl, and thienyl. More preferably, W is imidazolyl or pyridinyl. Most preferably, W is imidazolyl.

Preferably, the moiety

10 represents

Preferably the moiety

15 represents

where p is 1 or 2.

It is intended that the definition of any substituent or variable (e.g., R<sup>1a</sup>, R<sup>2</sup>, m, p, etc.) at a particular location in a molecule is independent of its definitions elsewhere in that molecule. Thus, -C(R<sup>1a</sup>)<sub>2</sub> can represent -CH<sub>2</sub>, -CHCH<sub>3</sub>, -CHC<sub>2</sub>H<sub>5</sub>, etc. It is understood that substituents and substitution patterns on the compounds of the instant invention can be selected by one of ordinary skill in the art to provide compounds that are chemically stable and that can be readily synthesized by techniques known in the art, as well as those methods set forth below, from readily available starting materials.

The pharmaceutically acceptable salts of the compounds of this invention include the conventional non-toxic salts of the compounds of this invention as formed, e.g., from non-toxic inorganic or organic acids. For example, such conventional non-toxic salts include those derived from inorganic acids such as hydrochloric, hydrobromic, sulfuric, sulfamic, phosphoric, nitric and the like; and the salts prepared from organic acids such as acetic, propionic, succinic, glycolic, stearic, lactic, malic, tartaric, citric, ascorbic, pantoic, maleic, hydroxymaleic, phenylacetic, glutamic, benzoic, salicylic, sulfanilic, 2-acetoxy-benzoic, fumaric, toluenesulfonic, methanesulfonic, ethane disulfonic, oxalic, isethionic, trifluoroacetic and the like.

The pharmaceutically acceptable salts of the compounds of this invention can be synthesized from the compounds of this invention which contain a basic moiety by conventional chemical methods. Generally, the salts are prepared either by ion exchange chromatography or by reacting the free base with

stoichiometric amounts or with an excess of the desired salt-forming inorganic or organic acid in a suitable solvent or various combinations of solvents.

Abbreviations which may be used in the description of the chemistry and in the Examples that follow include:

5	Ac <sub>2</sub> O	Acetic anhydride;
	AIBN	2,2'-Azobisisobutyronitrile;
	BOC/Boc	t-Butoxycarbonyl;
	CBz	Carbobenzyloxy;
10	DBAD	Di- <i>tert</i> -butyl azodicarboxylate;
	DBU	1,8-Diazabicyclo[5.4.0]undec-7-ene;
	DCE	1,2-Dichloroethane;
	DIEA	<i>N,N</i> -Diisopropylethylamine;
	DMAP	4-Dimethylaminopyridine;

	THF	Tetrahydrofuran;
15	TMS	Tetramethylsilane; and
	Tr	Trityl;

These reactions may be employed in a linear sequence to provide the compounds of the invention or they may be used to synthesize fragments which are subsequently joined by the alkylation reactions described in the Schemes. The procedures discussed and illustrated in the following schemes and synopsis may be used in the preparation of the compounds of the instant invention, for either (*R*) or (*S*) stereochemistry.

## 25 Synopsis of Schemes

Many of the compounds claimed within this invention can be prepared via Schemes 1-9 shown below. Scheme 1 describes the preparation of compounds wherein the spiroimidazolidine-2,5-dione precursor can be prepared from the corresponding benzo-substituted cyclic ketone by heating the ketone with cyanide and ammonium carbonate in wet DMF or aqueous ethanol. The ketones are either commercially available or can be prepared by a standard Friedel-Crafts intramolecular cyclization of the appropriate carboxylic acid by heating with an acid such as polyphosphoric acid. The spiroimidazolidinedione precursor can then be alkylated at the N-3 nitrogen with a suitable haloalkylheterocycle (i.e. 1-(4-cyanobenzyl)-4-chloromethyl-

imidazole) by stirring in the presence of a suitable base (i.e. sodium hydride) in dry DMF to provide the compound of the invention.

Another approach which can be utilized involves incorporation of the desired compatible substituted N-3 nitrogen component during a standard stepwise construction of the spiroimidazolidine-2,5-dione ring from an aminoacid precursor as illustrated in Scheme 2. A standard barium hydroxide hydrolysis of the unsubstituted spiroimidazolidine-2,5-dione gives the required corresponding aminoacid precursor. These and other alternative routes are described generally in Ware, *Chem. Rev.* 1950, 46: 403-457, herein incorporated by reference.

Scheme 3 describes a preparation of compounds wherein the spirooxazolidin-2-one precursor can be prepared by reduction of a cyanohydrin precursor with, for example, lithium aluminum hydride to obtain the corresponding aminoalcohol which is cyclized with phosgene in the presence of a base (i.e. triethyl amine). The spirooxazolidinone precursor can then be alkylated at the nitrogen with a suitable haloalkylheterocycle (i.e. 1-(4-cyanobenzyl)-4-chloromethyl-imidazole) by stirring in the presence of a suitable base (i.e. sodium hydride) in dry DMF to provide the compound of the invention.

In Scheme 4, compounds of formula A-1 (where substituent Z is CH<sub>2</sub> and M is NH) are synthesized using techniques known in the art, such as those described in *J. Am. Pharm. Assoc., Sci. Ed.*, 46, 118-124 (1957); herein incorporated by reference.

In Scheme 5, compounds of formula A-1 (where substituent Z is C(O) and M is NH) are synthesized using techniques known in the art, such as those described in *Chem. Pharm. Bull.*, 23(7), 1431-1435 (1975), herein incorporated by reference.

Schemes 6-9 illustrate syntheses of suitably substituted aldehydes useful in the syntheses of the instant compounds wherein the variable W is present as a pyridyl moiety. Similar synthetic strategies for preparing alkanols that incorporate other heterocyclic moieties for variable W are also well known in the art.

## SCHEME 9

It is understood that in the above schemes,

R' independently represents R<sup>2</sup> or a protected precursor thereof.

In a preferred embodiment of the instant invention the compounds of the invention are selective inhibitors of farnesyl-protein transferase. A compound  
5 is considered a selective inhibitor of farnesyl-protein transferase, for example, when its *in vitro* farnesyl-protein transferase inhibitory activity, as assessed by the assay described in Example 6, is at least 100 times greater than the *in vitro* activity of the same compound against geranylgeranyl-protein transferase-type I in the assay  
10 times greater activity against one of the enzymatic activities when comparing geranylgeranyl-protein transferase-type I inhibition and farnesyl-protein transferase inhibition.

It is also preferred that the selective inhibitor of farnesyl-protein transferase is further characterized by:

- 15 a) an IC<sub>50</sub> (a measure of *in vitro* inhibitory activity) for inhibition of the prenylation of newly synthesized K-Ras protein more than about 100-fold higher than the EC<sub>50</sub> for the inhibition of the farnesylation of hDJ protein. When measuring such IC<sub>50</sub>s and EC<sub>50</sub>s the assays described in Example 11 may be utilized.

20 It is also preferred that the selective inhibitor of farnesyl-protein transferase is further characterized by:

- b) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) for inhibition of K4B-Ras dependent activation of MAP kinases in cells at least 100-fold greater than the EC<sub>50</sub> for inhibition of the farnesylation of the protein hDJ in cells.

25 It is also preferred that the selective inhibitor of farnesyl-protein transferase is further characterized by:

- c) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) against H-Ras dependent activation of MAP kinases in cells at least 1000 fold lower than the inhibitory activity (IC<sub>50</sub>) against H-ras-CVLL (SEQ.ID.NO.: 1) dependent  
30 activation of MAP kinases in cells.

When measuring Ras dependent activation of MAP kinases in cells the assays described in Example 10 may be utilized.

In another preferred embodiment of the instant invention the compounds of the invention are dual inhibitors of farnesyl-protein transferase and geranylgeranyl-protein transferase type I. Such a dual inhibitor may be termed a Class II prenyl-protein transferase inhibitor and will exhibit certain characteristics  
5 when assessed in *in vitro* assays, which are dependent on the type of assay employed.

In a SEAP assay, such as described in Example 10, it is preferred that the dual inhibitor compound has an *in vitro* inhibitory activity (IC<sub>50</sub>) that is less than about 12μM against K4B-Ras dependent activation of MAP kinases in cells.

The Class II prenyl-protein transferase inhibitor may also be  
10 characterized by:

- a) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) for inhibiting K4B-Ras dependent activation of MAP kinases in cells between 0.1 and 100 times the IC<sub>50</sub> for inhibiting the farnesylation of the protein hDJ in cells; and
- b) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) for inhibiting K4B-Ras  
15 dependent activation of MAP kinases in cells greater than 5-fold lower than the inhibitory activity (IC<sub>50</sub>) against expression of the SEAP protein in cells transfected with the pCMV-SEAP plasmid that constitutively expresses the SEAP protein.

The Class II prenyl-protein transferase inhibitor may also be  
20 characterized by:

- a) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) against H-Ras dependent activation of MAP kinases in cells greater than 2 fold lower but less than 20,000 fold lower than the inhibitory activity (IC<sub>50</sub>) against H-ras-CVLL (SEQ.ID.NO.: 1) dependent activation of MAP kinases in cells; and
- 25 b) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) against H-ras-CVLL dependent activation of MAP kinases in cells greater than 5-fold lower than the inhibitory activity (IC<sub>50</sub>) against expression of the SEAP protein in cells transfected with the pCMV-SEAP plasmid that constitutively expresses the SEAP protein.

30 The Class II prenyl-protein transferase inhibitor may also be characterized by:

- a) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) against H-Ras dependent activation of MAP kinases in cells greater than 10-fold lower but

- less than 2,500 fold lower than the inhibitory activity (IC<sub>50</sub>) against H-*ras*-CVLL (SEQ.ID.NO.: 1) dependent activation of MAP kinases in cells; and
- b) an IC<sub>50</sub> (a measurement of *in vitro* inhibitory activity) against H-*ras*-CVLL dependent activation of MAP kinases in cells greater than 5 fold lower than the inhibitory activity (IC<sub>50</sub>) against expression of the SEAP protein in cells transfected with the pCMV-SEAP plasmid that constitutively expresses the SEAP protein.

A method for measuring the activity of the inhibitors of prenyl-protein transferase, as well as the instant combination compositions, utilized in the instant methods against Ras dependent activation of MAP kinases in cells is described in Example 10.

In yet another embodiment, a compound of the instant invention may be a more potent inhibitor of geranylgeranyl-protein transferase-type I than it is an inhibitor of farnesyl-protein transferase.

The instant compounds are useful as pharmaceutical agents for mammals, especially for humans. These compounds may be administered to patients for use in the treatment of cancer. Examples of the type of cancer which may be treated with the compounds of this invention include, but are not limited to, colorectal carcinoma, exocrine pancreatic carcinoma, myeloid leukemias and neurological tumors. Such tumors may arise by mutations in the *ras* genes themselves, mutations in the proteins that can regulate Ras activity (i.e., neurofibromin (NF-1), neu, src, abl, lck, fyn) or by other mechanisms.

The compounds of the instant invention inhibit farnesyl-protein transferase and the farnesylation of the oncogene protein Ras. The instant compounds may also inhibit tumor angiogenesis, thereby affecting the growth of tumors (J. Rak et al. *Cancer Research*, 55:4575-4580 (1995)). Such anti-angiogenesis properties of the instant compounds may also be useful in the treatment of certain forms of vision deficit related to retinal vascularization.

The compounds of this invention are also useful for inhibiting other proliferative diseases, both benign and malignant, wherein Ras proteins are aberrantly activated as a result of oncogenic mutation in other genes (i.e., the Ras gene itself is not activated by mutation to an oncogenic form) with said inhibition being accomplished by the administration of an effective amount of the compounds of

the invention to a mammal in need of such treatment. For example, the composition is useful in the treatment of neurofibromatosis, which is a benign proliferative disorder.

The instant compounds may also be useful in the treatment of certain viral infections, in particular in the treatment of hepatitis delta and related viruses (J.S. Glenn et al. *Science*, 256:1331-1333 (1992)).

The compounds of the instant invention are also useful in the prevention of restenosis after percutaneous transluminal coronary angioplasty by inhibiting neointimal formation (C. Indolfi et al. *Nature medicine*, 1:541-545(1995)).

The instant compounds may also be useful in the treatment and prevention of polycystic kidney disease (D.L. Schaffner et al. *American Journal of Pathology*, 142:1051-1060 (1993) and B. Cowley, Jr. et al. *FASEB Journal*, 2:A3160 (1988)).

The instant compounds may also be useful for the treatment of fungal infections.

The instant compounds may also be useful as inhibitors of proliferation of vascular smooth muscle cells and therefore useful in the prevention and therapy of arteriosclerosis and diabetic vascular pathologies.

The compounds of the instant invention may also be useful in the prevention and treatment of endometriosis, uterine fibroids, dysfunctional uterine bleeding and endometrial hyperplasia.

In such methods of prevention and treatment as described herein, the prenyl-protein transferase inhibitors of the instant invention may also be co-administered with other well known therapeutic agents that are selected for their particular usefulness against the condition that is being treated. For example, the prenyl-protein transferase inhibitor may be useful in further combination with drugs known to suppress the activity of the ovaries and slow the growth of the endometrial tissue. Such drugs include but are not limited to oral contraceptives, progestins, danazol and GnRH (gonadotropin-releasing hormone) agonists.

Administration of the prenyl-protein transferase inhibitor may also be combined with surgical treatment of endometriosis (such as surgical removal of misplaced endometrial tissue) where appropriate.

The instant compounds may also be useful as inhibitors of corneal inflammation. These compounds may improve the treatment of corneal opacity which

results from cauterization-induced corneal inflammation. The instant compounds may also be useful in reducing corneal edema and neovascularization. (K. Sonoda et al., *Invest. Ophthalmol. Vis. Sci.*, 1998, vol. 39, p 2245-2251).

5 The compounds of this invention may be administered to mammals, preferably humans, either alone or, preferably, in combination with pharmaceutically acceptable carriers, excipients or diluents, in a pharmaceutical composition, according to standard pharmaceutical practice. The compounds can be administered orally or parenterally, including the intravenous, intramuscular, intraperitoneal, subcutaneous, rectal and topical routes of administration.

10 Additionally, the compounds of the instant invention may be administered to a mammal in need thereof using a gel extrusion mechanism (GEM) device, such as that described in USSN 60/144,643, filed on July 20, 1999, which is hereby incorporated by reference. The compounds of the instant invention may also be administered to a mammal in need thereof using an osmotic controlled release drug  
15 delivery device, such as those described in USSN 60/162,589 and USSN 60/162,719, co-filed on October 29, 1999, and herein incorporated by reference.

As used herein, the term "composition" is intended to encompass a product comprising the specified ingredients in the specific amounts, as well as any product which results, directly or indirectly, from combination of the specific  
20 ingredients in the specified amounts.

The pharmaceutical compositions containing the active ingredient may be in a form suitable for oral use, for example, as tablets, troches, lozenges, aqueous or oily suspensions, dispersible powders or granules, emulsions, hard or soft capsules, or syrups or elixirs. Compositions intended for oral use may be prepared according to  
25 any method known to the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents selected from the group consisting of sweetening agents, flavoring agents, coloring agents and preserving agents in order to provide pharmaceutically elegant and palatable preparations. Tablets contain the active ingredient in admixture with non-toxic pharmaceutically acceptable excipients  
30 which are suitable for the manufacture of tablets. These excipients may be for example, inert diluents, such as calcium carbonate, sodium carbonate, lactose, calcium phosphate or sodium phosphate; granulating and disintegrating agents, for example, microcrystalline cellulose, sodium crosscarmellose, corn starch, or alginic acid; binding agents, for example starch, gelatin, polyvinyl-pyrrolidone or acacia, and

lubricating agents, for example, magnesium stearate, stearic acid or talc. The tablets may be uncoated or they may be coated by known techniques to mask the unpleasant taste of the drug or delay disintegration and absorption in the gastrointestinal tract and thereby provide a sustained action over a longer period. For example, a water soluble  
5 taste masking material such as hydroxypropyl-methylcellulose or hydroxypropyl-cellulose, or a time delay material such as ethyl cellulose, cellulose acetate butyrate may be employed.

Formulations for oral use may also be presented as hard gelatin capsules wherein the active ingredient is mixed with an inert solid diluent, for  
10 example, calcium carbonate, calcium phosphate or kaolin, or as soft gelatin capsules wherein the active ingredient is mixed with water soluble carrier such as polyethyleneglycol or an oil medium, for example peanut oil, liquid paraffin, or olive oil.

Aqueous suspensions contain the active material in admixture with  
15 excipients suitable for the manufacture of aqueous suspensions. Such excipients are suspending agents, for example sodium carboxymethylcellulose, methylcellulose, hydroxypropylmethyl-cellulose, sodium alginate, polyvinyl-pyrrolidone, gum tragacanth and gum acacia; dispersing or wetting agents may be a naturally-occurring phosphatide, for example lecithin, or condensation products of an alkylene oxide  
20 with fatty acids, for example polyoxyethylene stearate, or condensation products of ethylene oxide with long chain aliphatic alcohols, for example heptadecaethylene-oxyctanol, or condensation products of ethylene oxide with partial esters derived from fatty acids and a hexitol such as polyoxyethylene sorbitol monooleate, or  
25 condensation products of ethylene oxide with partial esters derived from fatty acids and hexitol anhydrides, for example polyethylene sorbitan monooleate. The aqueous suspensions may also contain one or more preservatives, for example ethyl, or n-propyl p-hydroxybenzoate, one or more coloring agents, one or more flavoring agents, and one or more sweetening agents, such as sucrose, saccharin or aspartame.

Oily suspensions may be formulated by suspending the active  
30 ingredient in a vegetable oil, for example arachis oil, olive oil, sesame oil or coconut oil, or in mineral oil such as liquid paraffin. The oily suspensions may contain a thickening agent, for example beeswax, hard paraffin or cetyl alcohol. Sweetening agents such as those set forth above, and flavoring agents may be added to provide a

palatable oral preparation. These compositions may be preserved by the addition of an anti-oxidant such as butylated hydroxyanisol or alpha-tocopherol.

5 Dispersible powders and granules suitable for preparation of an aqueous suspension by the addition of water provide the active ingredient in admixture with a dispersing or wetting agent, suspending agent and one or more preservatives. Suitable dispersing or wetting agents and suspending agents are exemplified by those already mentioned above. Additional excipients, for example sweetening, flavoring and coloring agents, may also be present. These compositions may be preserved by the addition of an anti-oxidant such as ascorbic acid.

10 The pharmaceutical compositions of the invention may also be in the form of an oil-in-water emulsions. The oily phase may be a vegetable oil, for example olive oil or arachis oil, or a mineral oil, for example liquid paraffin or mixtures of these. Suitable emulsifying agents may be naturally-occurring phosphatides, for example soy bean lecithin, and esters or partial esters derived from fatty acids and hexitol anhydrides, for example sorbitan monooleate, and 15 condensation products of the said partial esters with ethylene oxide, for example polyoxyethylene sorbitan monooleate. The emulsions may also contain sweetening, flavouring agents, preservatives and antioxidants.

Syrups and elixirs may be formulated with sweetening agents, for 20 example glycerol, propylene glycol, sorbitol or sucrose. Such formulations may also contain a demulcent, a preservative, flavoring and coloring agents and antioxidant.

The pharmaceutical compositions may be in the form of a sterile injectable aqueous solutions. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution and isotonic sodium chloride solution.

25 The sterile injectable preparation may also be a sterile injectable oil-in-water microemulsion where the active ingredient is dissolved in the oily phase. For example, the active ingredient may be first dissolved in a mixture of soybean oil and lecithin. The oil solution then introduced into a water and glycerol mixture and processed to form a microemulsion.

30 The injectable solutions or microemulsions may be introduced into a patient's blood-stream by local bolus injection. Alternatively, it may be advantageous to administer the solution or microemulsion in such a way as to maintain a constant circulating concentration of the instant compound. In order to maintain such a constant concentration, a continuous intravenous delivery device may be utilized.

An example of such a device is the Deltec CADD-PLUS™ model 5400 intravenous pump.

The pharmaceutical compositions may be in the form of a sterile injectable aqueous or oleagenous suspension for intramuscular and subcutaneous administration. This suspension may be formulated according to the known art using those suitable dispersing or wetting agents and suspending agents which have been mentioned above. The sterile injectable preparation may also be a sterile injectable solution or suspension in a non-toxic parenterally-acceptable diluent or solvent, for example as a solution in 1,3-butane diol. In addition, sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil may be employed including synthetic mono- or diglycerides. In addition, fatty acids such as oleic acid find use in the preparation of injectables.

Compounds of Formula A-1 may also be administered in the form of a suppositories for rectal administration of the drug. These compositions can be prepared by mixing the drug with a suitable non-irritating excipient which is solid at ordinary temperatures but liquid at the rectal temperature and will therefore melt in the rectum to release the drug. Such materials include cocoa butter, glycerinated gelatin, hydrogenated vegetable oils, mixtures of polyethylene glycols of various molecular weights and fatty acid esters of polyethylene glycol.

For topical use, creams, ointments, jellies, solutions or suspensions, etc., containing the compound of Formula A-1 are employed. (For purposes of this application, topical application shall include mouth washes and gargles.)

The compounds for the present invention can be administered in intranasal form via topical use of suitable intranasal vehicles and delivery devices, or via transdermal routes, using those forms of transdermal skin patches well known to those of ordinary skill in the art. To be administered in the form of a transdermal delivery system, the dosage administration will, of course, be continuous rather than intermittent throughout the dosage regimen. Compounds of the present invention may also be delivered as a suppository employing bases such as cocoa butter, glycerinated gelatin, hydrogenated vegetable oils, mixtures of polyethylene glycols of various molecular weights and fatty acid esters of polyethylene glycol.

When a compound according to this invention is administered into

a human subject, the daily dosage will normally be determined by the prescribing physician with the dosage generally varying according to the age, weight, sex and response of the individual patient, as well as the severity of the patient's symptoms.

In one exemplary application, a suitable amount of compound is  
5 administered to a mammal undergoing treatment for cancer. Administration occurs in an amount between about 0.1 mg/kg of body weight to about 60 mg/kg of body weight per day, preferably of between 0.5 mg/kg of body weight to about 40 mg/kg of body weight per day.

The compounds of the instant invention may also be co-administered  
10 with other well known therapeutic agents that are selected for their particular usefulness against the condition that is being treated. For example; the compounds of the instant invention may also be co-administered with other well known cancer therapeutic agents that are selected for their particular usefulness against the condition that is being treated. Included in such combinations of therapeutic agents are  
15 combinations of the instant farnesyl-protein transferase inhibitors and an antineoplastic agent. It is also understood that such a combination of antineoplastic agent and inhibitor of farnesyl-protein transferase may be used in conjunction with other methods of treating cancer and/or tumors, including radiation therapy and surgery. It is further understood that any of the therapeutic agents described herein  
20 may also be used in combination with a compound of the instant invention and an antineoplastic agent.

Examples of an antineoplastic agent include, in general, microtubule-stabilizing agents ( such as paclitaxel (also known as Taxol®), docetaxel (also known as Taxotere®), epothilone A, epothilone B, desoxyepothilone A, desoxyepothilone B  
25 or their derivatives); microtubule-disruptor agents; alkylating agents, for example, nitrogen mustards, ethyleneimine compounds, alkyl sulfonates and other compounds with an alkylating action such as nitrosoureas, cisplatin, and dacarbazine; anti-metabolites, for example, folic acid, purine or pyrimidine antagonists; epidophyllotoxin; an antineoplastic enzyme; a topoisomerase inhibitor; procarbazine;  
30 mitoxantrone; platinum coordination complexes; biological response modifiers and growth inhibitors; mitotic inhibitors, for example, vinca alkaloids and derivatives of podophyllotoxin; cytotoxic antibiotics; hormonal/anti-hormonal therapeutic agents, haematopoietic growth factors and antibodies (such as trastuzumab (Herceptin™)).

Example classes of antineoplastic agents include, for example, the anthracycline family of drugs; the vinca drugs, the mitomycins, the bleomycins, the cytotoxic nucleosides, the taxanes, the epothilones, discodermolide, the pteridine family of drugs, diynenes and the podophyllotoxins. Particularly useful members of those classes include, for example, doxorubicin, carminomycin, daunorubicin, aminopterin, methotrexate, methopterin, dichloro-methotrexate, mitomycin C, porfiromycin, 5-fluorouracil, 6-mercaptopurine, gemcitabine, cytosine arabinoside, podophyllotoxin or podo-phyllotoxin derivatives such as etoposide, etoposide phosphate or teniposide, melphalan, vinblastine, vincristine, leurosine, vindesine, leurosine, paclitaxel and the like. Other useful antineoplastic agents include estramustine, cisplatin, carboplatin, cyclophosphamide, bleomycin, tamoxifen, ifosamide, melphalan, hexamethyl melamine, thiotepa, cytarabin, idatrexate, trimetrexate, dacarbazine, L-asparaginase, dactinomycin, mechlorethamine (nitrogen mustard), streptozocin, cyclophosphamide, carmustine (BCNU), lomustine (CCNU), procarbazine, mitomycin, cytarabine, etoposide, methotrexate, bleomycin, chlorambucil, camptothecin, CPT-11, topotecan, ara-C, bicalutamide, flutamide, leuprolide, pyridobenzoindole derivatives, interferons and interleukins. Particular examples of antineoplastic, or chemotherapeutic, agents are described, for example, by D. J. Stewart in "Nausea and Vomiting: Recent Research and Clinical Advances", Eds. J. Kucharczyk, et al., CRC Press Inc., Boca Raton, Florida, USA (1991), pages 177-203, especially page 188. See also, R. J. Gralla, et al., Cancer Treatment Reports, 68(1), 163-172 (1984).

The preferred class of antineoplastic agents is the taxanes and the preferred antineoplastic agent is paclitaxel.

The compounds of the instant invention may also be co-administered with antisense oligonucleotides which are specifically hybridizable with RNA or DNA deriving from human *ras* gene. Such antisense oligonucleotides are described in U.S. Pat. No. 5,576,208 and PCT Publ. No. WO 99/22772. The instant compounds are particularly useful when co-administered with the antisense oligonucleotide comprising the amino acid sequence of SEQ.ID.NO: 2 of U.S. Pat. No. 5,576,208.

Certain compounds of the instant invention may exhibit very low plasma concentrations and significant inter-individual variation in the plasma levels of the compound. It is believed that very low plasma concentrations and high intersubject variability achieved following administration of certain prenyl-protein

transferase inhibitors to mammals may be due to extensive metabolism by cytochrome P450 enzymes prior to entry of drug into the systemic circulation. Prenyl-protein transferase inhibitors may be metabolized by cytochrome P450 enzyme systems, such as CYP3A4, CYP2D6, CYP2C9, CYP2C19 or other cytochrome P450 isoform. If a compound of the instant invention demonstrates an affinity for one or more of the cytochrome P450 enzyme systems, another compound with a higher affinity for the P450 enzyme(s) involved in metabolism should be administered concomitantly. Examples of compounds that have a comparatively very high affinity for CYP3A4, CYP2D6, CYP2C9, CYP2C19 or other P450 isoform include, but are not limited to, piperonyl butoxide, troleandomycin, erythromycin, proadifen, isoniazid, allylisopropylacetamide, ethinylestradiol, chloramphenicol, 2-ethynylnaphthalene and the like. Such a high affinity compound, when employed in combination with a compound of formula A-1, may reduce the inter-individual variation and increase the plasma concentration of a compound of formula A-1 to a level having substantial therapeutic activity by inhibiting the metabolism of the compound of formula A-1. Additionally, inhibiting the metabolism of a compound of the instant invention prolongs the pharmacokinetic half-life, and thus the pharmacodynamic effect, of the compound.

A compound of the present invention may be employed in conjunction with antiemetic agents to treat nausea or emesis, including acute, delayed, late-phase, and anticipatory emesis, which may result from the use of a compound of the present invention, alone or with radiation therapy. For the prevention or treatment of emesis a compound of the present invention may be used in conjunction with other anti-emetic agents, especially neurokinin-1 receptor antagonists, 5HT<sub>3</sub> receptor antagonists, such as ondansetron, granisetron, tropisetron, and zatisetron, GABAB receptor agonists, such as baclofen, or a corticosteroid such as Decadron (dexamethasone), Kenalog, Aristocort, Nasalide, Preferid, Benecorten or others such as disclosed in U.S. Patent Nos. 2,789,118, 2,990,401, 3,048,581, 3,126,375, 3,929,768, 3,996,359, 3,928,326 and 3,749,712. For the treatment or prevention of emesis, conjunctive therapy with a neurokinin-1 receptor antagonist, a 5HT<sub>3</sub> receptor antagonist and a corticosteroid is preferred.

Neurokinin-1 receptor antagonists of use in conjunction with the compounds of the present invention are fully described, for example, in U.S. Patent

Nos. 5,162,339, 5,232,929, 5,242,930, 5,373,003, 5,387,595, 5,459,270, 5,494,926, 5,496,833, 5,637,699, 5,719,147; European Patent Publication Nos. EP 0 360 390, 0 394 989, 0 428 434, 0 429 366, 0 430 771, 0 436 334, 0 443 132, 0 482 539, 0 498 069, 0 499 313, 0 512 901, 0 512 902, 0 514 273, 0 514 274, 0 514 275, 0 514 276, 0 515 681, 0 517 589, 0 520 555, 0 522 808, 0 528 495, 0 532 456, 0 533 280, 0 536 817, 0 545 478, 0 558 156, 0 577 394, 0 585 913, 0 590 152, 0 599 538, 0 610 793, 0 634 402, 0 686 629, 0 693 489, 0 694 535, 0 699 655, 0 699 674, 0 707 006, 0 708 101, 0 709 375, 0 709 376, 0 714 891, 0 723 959, 0 733 632 and 0 776 893; PCT International Patent Publication Nos. WO 90/05525, 90/05729, 91/09844, 91/18899, 92/01688, 92/06079, 92/12151, 92/15585, 92/17449, 92/20661, 92/20676, 92/21677, 92/22569, 93/00330, 93/00331, 93/01159, 93/01165, 93/01169, 93/01170, 93/06099, 93/09116, 93/10073, 93/14084, 93/14113, 93/18023, 93/19064, 93/21155, 93/21181, 93/23380, 93/24465, 94/00440, 94/01402, 94/02461, 94/02595, 94/03429, 94/03445, 94/04494, 94/04496, 94/05625, 94/07843, 94/08997, 94/10165, 94/10167, 94/10168, 94/10170, 94/11368, 94/13639, 94/13663, 94/14767, 94/15903, 94/19320, 94/19323, 94/20500, 94/26735, 94/26740, 94/29309, 95/02595, 95/04040, 95/04042, 95/06645, 95/07886, 95/07908, 95/08549, 95/11880, 95/14017, 95/15311, 95/16679, 95/17382, 95/18124, 95/18129, 95/19344, 95/20575, 95/21819, 95/22525, 95/23798, 95/26338, 95/28418, 95/30674, 95/30687, 95/33744, 96/05181, 96/05193, 96/05203, 96/06094, 96/07649, 96/10562, 96/16939, 96/18643, 96/20197, 96/21661, 96/29304, 96/29317, 96/29326, 96/29328, 96/31214, 96/32385, 96/37489, 97/01553, 97/01554, 97/03066, 97/08144, 97/14671, 97/17362, 97/18206, 97/19084, 97/19942 and 97/21702; and in British Patent Publication Nos. 2 266 529, 2 268 931, 2 269 170, 2 269 590, 2 271 774, 2 292 144, 2 293 168, 2 293 169, and 2 302 689. The preparation of such compounds is fully described in the aforementioned patents and publications.

A particularly preferred neurokinin-1 receptor antagonist for use in conjunction with the compounds of the present invention is 2-(R)-(1-(R)-(3,5-bis(trifluoromethyl)phenyl)ethoxy)-3-(S)-(4-fluorophenyl)-4-(3-(5-oxo-1H,4H-1,2,4-triazolo)methyl)morpholine, or a pharmaceutically acceptable salt thereof, which is described in U.S. Patent No. 5,719,147.

For the treatment of cancer, it may be desirable to employ a compound of the present invention in conjunction with another pharmacologically active

agent(s). A compound of the present invention and the other pharmacologically active agent(s) may be administered to a patient simultaneously, sequentially or in combination. For example, the present compound may employed directly in combination with the other active agent(s), or it may be administered prior, 5 concurrent or subsequent to the administration of the other active agent(s). In general, the currently available dosage forms of the known therapeutic agents for use in such combinations will be suitable.

For example, a compound of the present invention may be presented together with another therapeutic agent in a combined preparation, such as with an 10 antiemetic agent for simultaneous, separate, or sequential use in the relief of emesis associated with employing a compound of the present invention and radiation therapy. Such combined preparations may be, for example, in the form of a twin pack. A preferred combination comprises a compound of the present invention with antiemetic agents, as described above.

15 Radiation therapy, including x-rays or gamma rays which are delivered from either an externally applied beam or by implantation of tiny radioactive sources, may also be used in combination with the instant inhibitor of prenyl-protein transferase alone to treat cancer.

20 Additionally, compounds of the instant invention may also be useful as radiation sensitizers, as described in WO 97/38697, published on October 23, 1997, and herein incorporated by reference.

The instant compounds may also be useful in combination with other inhibitors of parts of the signaling pathway that links cell surface growth factor receptors to nuclear signals initiating cellular proliferation. Thus, the instant 25 compounds may be utilized in combination with farnesyl pyrophosphate competitive inhibitors of the activity of farnesyl-protein transferase or in combination with a compound which has Raf antagonist activity. The instant compounds may also be co-administered with compounds that are selective inhibitors of geranylgeranyl protein transferase.

30 In particular, if the compound of the instant invention is a selective inhibitor of farnesyl-protein transferase, co-administration with a compound(s) that is a selective inhibitor of geranylgeranyl protein transferase may provide an improved therapeutic effect.

In particular, the compounds disclosed in the following patents

and publications may be useful as farnesyl pyrophosphate-competitive inhibitor component of the instant composition: U.S. Ser. Nos. 08/254,228 and 08/435,047. Those patents and publications are incorporated herein by reference.

In practicing methods of this invention, which comprise administering, simultaneously or sequentially or in any order, two or more of a protein substrate-competitive inhibitor and a farnesyl pyrophosphate-competitive inhibitor, such administration can be orally or parenterally, including intravenous, intramuscular, intraperitoneal, subcutaneous, rectal and topical routes of administration. It is preferred that such administration be orally. It is more preferred that such administration be orally and simultaneously. When the protein substrate-competitive inhibitor and farnesyl pyrophosphate-competitive inhibitor are administered sequentially, the administration of each can be by the same method or by different methods.

The instant compounds may also be useful in combination with an integrin antagonist for the treatment of cancer, as described in U.S. Ser. No. 09/055,487, filed April 6, 1998, and WO 98/44797, published on October 15, 1998, which are incorporated herein by reference.

As used herein the term an integrin antagonist refers to compounds which selectively antagonize, inhibit or counteract binding of a physiological ligand to an integrin(s) that is involved in the regulation of angiogenesis, or in the growth and invasiveness of tumor cells. In particular, the term refers to compounds which selectively antagonize, inhibit or counteract binding of a physiological ligand to the  $\alpha v \beta 3$  integrin, which selectively antagonize, inhibit or counteract binding of a physiological ligand to the  $\alpha v \beta 5$  integrin, which antagonize, inhibit or counteract binding of a physiological ligand to both the  $\alpha v \beta 3$  integrin and the  $\alpha v \beta 5$  integrin, or which antagonize, inhibit or counteract the activity of the particular integrin(s) expressed on capillary endothelial cells. The term also refers to antagonists of the  $\alpha 1 \beta 1$ ,  $\alpha 2 \beta 1$ ,  $\alpha 5 \beta 1$ ,  $\alpha 6 \beta 1$  and  $\alpha 6 \beta 4$  integrins. The term also refers to antagonists of any combination of  $\alpha v \beta 3$  integrin,  $\alpha v \beta 5$  integrin,  $\alpha 1 \beta 1$ ,  $\alpha 2 \beta 1$ ,  $\alpha 5 \beta 1$ ,  $\alpha 6 \beta 1$  and  $\alpha 6 \beta 4$  integrins. The instant compounds may also be useful with other agents that inhibit angiogenesis and thereby inhibit the growth and invasiveness of tumor cells, including, but not limited to angiostatin and endostatin.

The instant compounds may also be useful in combination with an inhibitor of 3-hydroxy-3-methylglutaryl-CoA reductase (HMG-CoA reductase) for

the treatment of cancer. Compounds which have inhibitory activity for HMG-CoA reductase can be readily identified by using assays well-known in the art. For example, see the assays described or cited in U.S. Patent 4,231,938 at col. 6, and WO 84/02131 at pp. 30-33. The terms "HMG-CoA reductase inhibitor" and

5 "inhibitor of HMG-CoA reductase" have the same meaning when used herein.

Examples of HMG-CoA reductase inhibitors that may be used include but are not limited to lovastatin (MEVACOR®; see US Patent No. 4,231,938; 4,294,926; 4,319,039), simvastatin (ZOCOR®; see US Patent No. 4,444,784; 4,820,850; 4,916,239), pravastatin (PRAVACHOL®; see US Patent Nos. 4,346,227; 10 4,537,859; 4,410,629; 5,030,447 and 5,180,589), fluvastatin (LESCOL®; see US Patent Nos. 5,354,772; 4,911,165; 4,929,437; 5,189,164; 5,118,853; 5,290,946; 5,356,896), atorvastatin (LIPITOR®; see US Patent Nos. 5,273,995; 4,681,893; 5,489,691; 5,342,952) and cerivastatin (also known as rivastatin and BAYCHOL®; see US Patent No. 5,177,080). The structural formulas of these and additional HMG-  
15 CoA reductase inhibitors that may be used in the instant methods are described at page 87 of M. Yalpani, "Cholesterol Lowering Drugs", *Chemistry & Industry*, pp. 85-89 (5 February 1996) and US Patent Nos. 4,782,084 and 4,885,314. The term HMG-CoA reductase inhibitor as used herein includes all pharmaceutically acceptable lactone and open-acid forms (i.e., where the lactone ring is opened to form  
20 the free acid) as well as salt and ester forms of compounds which have HMG-CoA reductase inhibitory activity, and therefor the use of such salts, esters, open-acid and lactone forms is included within the scope of this invention. An illustration of the lactone portion and its corresponding open-acid form is shown below as structures I and II.

In HMG-CoA reductase inhibitors, where an open-acid form can exist, salt and ester forms may preferably be formed from the open-acid, and all such forms are included within the meaning of the term "HMG-CoA reductase inhibitor" as used herein. Preferably, the HMG-CoA reductase inhibitor is selected from lovastatin and simvastatin, and most preferably simvastatin. Herein, the term "pharmaceutically acceptable salts" with respect to the HMG-CoA reductase inhibitor shall mean non-toxic salts of the compounds employed in this invention which are generally prepared by reacting the free acid with a suitable organic or inorganic base, particularly those formed from cations such as sodium, potassium, aluminum, calcium, lithium, magnesium, zinc and tetramethylammonium, as well as those salts formed from amines such as ammonia, ethylenediamine, N-methylglucamine, lysine, arginine, ornithine, choline, N,N'-dibenzylethylenediamine, chlorprocaine, diethanolamine, procaine, N-benzylphenethylamine, 1-p-chlorobenzyl-2-pyrrolidine-1'-yl-methylbenzimidazole, diethylamine, piperazine, and tris(hydroxymethyl)-aminomethane. Further examples of salt forms of HMG-CoA reductase inhibitors may include, but are not limited to, acetate, benzenesulfonate, benzoate, bicarbonate, bisulfate, bitartrate, borate, bromide, calcium edetate, camsylate, carbonate, chloride, clavulanate, citrate, dihydrochloride, edetate, edisylate, estolate, esylate, fumarate, gluceptate, gluconate, glutamate, glycolylarsanilate, hexylresorcinate, hydrabamine, hydrobromide, hydrochloride, hydroxynapthoate, iodide, isothionate, lactate, lactobionate, laurate, malate, maleate, mandelate, mesylate, methylsulfate, mucate, napsylate, nitrate, oleate, oxalate, pamaote, palmitate, panthothenate, phosphate/diphosphate, polygalacturonate, salicylate, stearate, subacetate, succinate, tannate, tartrate, teoclate, tosylate, triethiodide, and valerate.

Ester derivatives of the described HMG-CoA reductase inhibitor compounds may act as prodrugs which, when absorbed into the bloodstream of a warm-blooded animal, may cleave in such a manner as to release the drug form and permit the drug to afford improved therapeutic efficacy.

Similarly, the instant compounds may be useful in combination with agents that are effective in the treatment and prevention of NF-1, restenosis, polycystic kidney disease, infections of hepatitis delta and related viruses and fungal infections.

If formulated as a fixed dose, such combination products employ the combinations of this invention within the dosage range described above and the other pharmaceutically active agent(s) within its approved dosage range. Combinations of the instant invention may alternatively be used sequentially with known pharmaceutically acceptable agent(s) when a multiple combination formulation is inappropriate.

The instant compounds may also be useful in combination with prodrugs of antineoplastic agents. In particular, the instant compounds may be co-administered either concurrently or sequentially with a conjugate (termed a "PSA conjugate") which comprises an oligopeptide, that is selectively cleaved by enzymatically active prostate specific antigen (PSA), and an antineoplastic agent. Such co-administration will be particularly useful in the treatment of prostate cancer or other cancers which are characterized by the presence of enzymatically active PSA in the immediate surrounding cancer cells, which is secreted by the cancer cells.

Compounds which are PSA conjugates and are therefore useful in such a co-administration, and methods of synthesis thereof, can be found in the following patents, pending patent applications and publications which are herein incorporated by reference:

U.S. Patent No. 5,599,686, granted on Feb. 4, 1997;

WO 96/00503 (January 11, 1996); USSN 08/404,833, filed on March 15, 1995;

USSN 08/468,161, filed on June 6, 1995;

U.S. Patent No. 5,866,679, granted on February 2, 1999;

WO 98/10651 (March 19, 1998); USSN 08/926,412, filed on September 9, 1997;

WO 98/18493 (May 7, 1998); USSN 08/950,805, filed on October 14, 1997;

WO 99/02175 (January 21, 1999); USSN 09/112,656, filed on July 9, 1998; and

WO 99/28345 (June 10, 1999); USSN 09/193,365, filed on November 17, 1998.

Compounds which are described as prodrugs wherein the active therapeutic agent is released by the action of enzymatically active PSA and therefore may be useful in such a co-administration, and methods of synthesis thereof, can be found in the following patents; pending patent applications and publications, which are herein incorporated by reference: WO 98/52966 (November 26, 1998).

All patents, publications and pending patent applications identified are herein incorporated by reference.

The compounds of the instant invention are also useful as a component in an assay to rapidly determine the presence and quantity of farnesyl-protein transferase (FPTase) in a composition. Thus the composition to be tested may be divided and the two portions contacted with mixtures which comprise a known substrate of FPTase (for example a tetrapeptide having a cysteine at the amine terminus) and farnesyl pyrophosphate and, in one of the mixtures, a compound of the instant invention. After the assay mixtures are incubated for an sufficient period of time, well known in the art, to allow the FPTase to farnesylate the substrate, the chemical content of the assay mixtures may be determined by well known immunological, radiochemical or chromatographic techniques. Because the compounds of the instant invention are selective inhibitors of FPTase, absence or quantitative reduction of the amount of substrate in the assay mixture without the compound of the instant invention relative to the presence of the unchanged substrate in the assay containing the instant compound is indicative of the presence of FPTase in the composition to be tested.

It would be readily apparent to one of ordinary skill in the art that such an assay as described above would be useful in identifying tissue samples which contain farnesyl-protein transferase and quantitating the enzyme. Thus, potent inhibitor compounds of the instant invention may be used in an active site titration assay to determine the quantity of enzyme in the sample. A series of samples composed of aliquots of a tissue extract containing an unknown amount of farnesyl-protein transferase, an excess amount of a known substrate of FPTase (for example a tetrapeptide having a cysteine at the amine terminus) and farnesyl pyrophosphate are incubated for an appropriate period of time in the presence of varying concentrations of a compound of the instant invention. The concentration of a sufficiently potent inhibitor (i.e., one that has a  $K_i$  substantially smaller than the concentration of enzyme

in the assay vessel) required to inhibit the enzymatic activity of the sample by 50% is approximately equal to half of the concentration of the enzyme in that particular sample.

5

### EXAMPLES

Examples provided are intended to assist in a further understanding of the invention. Particular materials employed, species and conditions are intended to be further illustrative of the invention and are not intended to limit the reasonable scope thereof.

10

### EXAMPLE 1

#### Preparation of 1-(4-Cyanobenzyl)-5-Chloromethyl Imidazole HCl

15

#### Step A: Preparation of p-Cyanobenzylamine • H<sub>3</sub>PO<sub>4</sub> salt

20

A slurry of HMTA in 2.5 L EtOH was added gradually over about 30 min to about 60 min to a stirred slurry of cyanobenzyl-bromide in 3.5 L EtOH and maintained at about 48-53°C with heating & cooling in a 22L neck flask (small exotherm). Then the transfer of HMTA to the reaction mixture was completed with the use of 1.0 L EtOH. The reaction mixture was heated to about 68-73°C and aged at about 68-73°C for about 90 min. The reaction mixture was a slurry containing a granular precipitate which quickly settled when stirring stopped.

25

The mixture was cooled to a temperature of about 50°C to about 55°C. Propionic acid was added to the mixture and the mixture was heated and maintained at a temperature of about 50°C to about 55°C. Phosphoric acid was gradually added over about 5 min to about 10 min, maintaining the reaction mixture below about 65°C to form a precipitate-containing mixture. Then the mixture was gradually warmed to

about 65°C to about 70°C over about 30 min and aged at about 65°C to about 70°C for about 30 min. The mixture was then gradually cooled to about 20-25°C over about 1 hour and aged at about 20-25°C for about 1 hour.

The reaction slurry was then filtered. The filter cake was washed four times with EtOH, using the following sequence, 2.5 L each time. The filter cake was then washed with water five times, using 300 mL each time. Finally, the filter cake was washed twice with MeCN (1.0 L each time) and the above identified compound was obtained.

10 Step B: 4-Cyanobenzylamine Hydrochloride via Hexamethylene-tetrammonium salt

---

A 72 liter vessel was charged with 190 proof ethanol (14.4 L) followed by the addition of 4-cyanobenzylbromide (2.98 kg) and HMTA (2.18 kg) at ambient temperature. The mixture was heated to about 72-75°C over about 60 min. On warming, the solution thickens and additional ethanol (1.0 liter) was added to facilitate stirring. The batch was aged at about 72-75°C for about 30 min.

The mixture was allowed to cool to about 20°C over about 60 min, and HCl gas (2.20 kg) was sparged into the slurry over about 4 hours during which time the temperature rose to about 65°C. The mixture was heated to about 70-72°C and aged for about 1 hour. The slurry was cooled to about 30°C and ethyl acetate (22.3 L) added over about 30 min. The slurry was cooled to about -5°C over about 40 min and aged at about -3 to about -5°C for about 30 min. The mixture was filtered and the crystalline solid was washed with chilled ethyl acetate (3 x 3 L). The solid was dried under a N<sub>2</sub> stream for about 1 hour before charging to a 50 liter vessel containing water (5.5 L). The pH was adjusted to about 10-10.5 with 50% NaOH (4.0 kg) maintaining the internal temperature below about 30°C. At about 25°C, methylene chloride (2.8 L) was added and stirring continued for about 15 min. The layers were allowed to settle and the lower organic layer was removed. The aqueous layer was

extracted with methylene chloride (2 x 2.2 L). The combined organic layers were dried over potassium carbonate (650 g). The carbonate was removed via filtration and the filtrate concentrated in vacuo at about 25°C to give a free base as a yellow oil.

The oil was transferred to a 50 liter vessel with the aid of ethanol (1.8 L). Ethyl acetate (4.1 L) was added at about 25°C. The solution was cooled to about 15°C and HCl gas (600 g) was sparged in over about 3 hours, while keeping batch temperature below about 40°C. At about 20-25°C, ethyl acetate (5.8 L) was added to the slurry, followed by cooling to about -5°C over about 1 hour. The slurry was aged at about -5°C for about 1 hour and the solids isolated via filtration. The cake was washed with a chilled mixture of EtOAc/EtOH (9:1 v/v) (1 x 3.8 L), then the cake was washed with chilled EtOAc (2 x 3.8 L). The solids were dried in vacuo at about 25°C to provide the above-titled compound.

<sup>1</sup>H NMR (250 MHz, CDCl<sub>3</sub>) δ 7.83-7.79 (d, 2H), 7.60-7.57 (d, 2H), 4.79 (s, 2H), 4.25 (s, 2H); <sup>13</sup>C NMR (62.9 MHz, CDCl<sub>3</sub>) δ 149.9, 139.8, 134.2, 131.2, 119.7, 113.4, 49.9, 49.5, 49.2, 48.8, 48.5, 48.2, 43.8.

Step C: 1-(4-Cyanobenzyl)-2-Mercapto-5-Hydroxymethyl-imidazole

7% water in acetonitrile (50 mL) was added to a 250 mL roundbottom flask. Next, an amine phosphate salt (12.49 g), as described above in Step A, was added to the flask. Next potassium thiocyanate (6.04 g) and dihydroxyacetone (5.61 g) was added. Lastly, propionic acid (10.0 mL) was added. Acetonitrile/water 93:7 (25 mL) was used to rinse down the sides of the flask. This mixture was then heated to 60°C, aged for about 30 minutes and seeded with 1% thioimidazole. The mixture was then aged for about 1.5 to about 2 hours at 60°C. Next, the mixture was heated to 70°C, and aged for 2 hours. The temperature of the mixture was then cooled to room temperature and was aged overnight. The thioimidazole product was obtained by vacuum filtration. The filter cake was washed four times acetonitrile (25 mL each

time) until the filtrates became nearly colorless. Then the filter cake was washed three times with water (approximately 25-50 mL each time) and dried in vacuo to obtain the above-identified compound.

5    Step D:            1-(4-Cyanobenzyl)-5-Hydroxymethylimidazole

A 1L flask with cooling/heating jacket and glass stirrer (Lab-Max) was charged with water (200 mL) at 25°C. The thioimidazole (90.27 g), as described above in Step C, was added, followed by acetic acid (120 mL) and water (50 mL) to form a pale pink slurry. The reaction was warmed to 40°C over 10 minutes. Hydrogen peroxide (90.0 g) was added slowly over 2 hours by automatic pump maintaining a temperature of 35-45°C. The temperature was lowered to 25°C and the solution aged for 1 hour.

The solution was cooled to 20°C and quenched by slowly adding 20% aqueous Na<sub>2</sub>SO<sub>3</sub> (25 mL) maintaining the temperature at less than 25°C. The solution was filtered through a bed of DARCO G-60 (9.0 g) over a bed of SolkaFlok (1.9 g) in a sintered glass funnel. The bed was washed with 25 mL of 10% acetic acid in water.

The combined filtrates were cooled to 15°C and a 25% aqueous ammonia was added over a 30 minute period, maintaining the temperature below 25°C, to a pH of 9.3. The yellowish slurry was aged overnight at 23°C (room temperature). The solids were isolated via vacuum filtration. The cake (100 mL wet volume) was washed with 2 x 250 mL 5% ammonia (25%) in water, followed by 100 mL of ethyl acetate. The wet cake was dried with vacuum/N<sub>2</sub> flow and the above-titled compound was obtained.

<sup>1</sup>H NMR (250 MHz, CDCl<sub>3</sub>): δ 7.84-7.72 (d, 2H), 7.31-7.28 (d, 2H), 6.85 (s, 1H), 5.34 (s, 2H), 5.14-5.11 (t, 1H), 4.30-4.28 (d, 2H), 3.35 (s, 1H).

Step E: 1-(4-cyanobenzyl)-5-chloromethyl imidazole HCl salt

5                    1-(4-Cyanobenzyl)-5-hydroxymethylimidazole (1.0 kg), as described  
in above in Step D, was slurried with DMF (4.8 L) at 22°C and then cooled to -5°C.  
Thionyl chloride (390 mL) was added dropwise over 60 min during which time  
the reaction temperature rose to a maximum of 9°C. The solution became nearly  
homogeneous before the product began to precipitate from solution. The slurry  
10 was warmed to 26°C and aged for 1 h.

The slurry was then cooled to 5°C and 2-propanol (120 mL) was added  
dropwise, followed by the addition of ethyl acetate (4.8 L). The slurry was aged at  
5°C for 1 h before the solids were isolated and washed with chilled ethyl acetate (3 x  
1 L). The product was dried in vacuo at 40°C overnight to provide the above-titled  
15 compound.

<sup>1</sup>H NMR (250 MHz DMSO-d<sub>6</sub>): d 9.44 (s, 1H), 7.89 (d, 2H, 8.3 Hz), 7.89 (s, 1H),  
7.55 (d, 2H, 8.3 Hz), 5.70 (s, 2H), 4.93 (s, 2H). <sup>13</sup>C NMR (75.5 MHz DMSO-d<sub>6</sub>): d<sub>c</sub>  
139.7, 137.7, 132.7, 130.1, 128.8, 120.7, 118.4, 111.2, 48.9, 33.1.

20

Step F: 1-(4-Cyanobenzyl)-5-Chloromethyl Imidazole HCl salt via addition of  
Hydroxymethylimidazole to VilsmeierReagent

To an ice cold solution of dry acetonitrile (3.2 L, 15 L/Kg hydroxymethylimidazole) was added 99% oxalyl chloride (101 mL, 1.15 mol, 1.15 equiv.), followed by dry DMF (178 mL, 2.30 mol, 2.30 equiv.), at which time vigorous evolution of gas was observed. After stirring for about 5 to 10 min following the addition of DMF, solid hydroxymethylimidazole (213 g, 1.00 mol), as described above in Step D, was added gradually. After the addition, the internal temperature was allowed to warm to a temperature of about 23°C to about 25°C and stirred for about 1 to 3 hours. The mixture was filtered, then washed with dry acetonitrile (400 mL displacement wash, 550 mL slurry wash, and a 400 mL displacement wash). The solid was maintained under an N<sub>2</sub> atmosphere during the filtration and washing to prevent hydrolysis of the chloride by adventitious H<sub>2</sub>O. This yielded the crystalline form of the chloromethylimidazole hydrochloride.

<sup>1</sup>H NMR (250 MHz DMSO-d<sub>6</sub>): δ 9.44 (s, 1H), 7.89 (d, 2H, 8.3 Hz), 7.89 (s, 1H), 7.55 (d, 2H, 8.3 Hz), 5.70 (s, 2H), 4.93 (s, 2H). <sup>13</sup>C NMR (75.5 MHz DMSO-d<sub>6</sub>): δ<sub>C</sub> 139.7, 137.7, 132.7, 130.1, 128.8, 120.7, 118.4, 111.2, 48.9, 33.1.

Step G: 1-(4-Cyanobenzyl)-5-Chloromethyl Imidazole HCl salt via addition of Vilsmeier Reagent to Hydroxymethylimidazole

To an ice cold solution of dry DMF (178 mL, 2.30 mol, 2.30

equiv.) in dry acetonitrile (2.56 L, 12 L/Kg Hydroxymethylimidazole) was added oxalyl chloride (101 mL, 1.15 mol, 1.15 equiv). The heterogeneous mixture in the reagent vessel was then transferred to a mixture of hydroxymethylimidazole (213 g, 1.00 mol), as described above in Step D, in dry acetonitrile (1.7 L, 8 L/Kg hydroxymethylimidazole). Additional dry acetonitrile (1.1 - 2.3 L, 5 - 11 L/Kg hydroxymethylimidazole) was added to the remaining solid Vilsmeier reagent in the reagent vessel. This, now nearly homogenous, solution was transferred to the reaction vessel at  $T_i \leq +6^\circ\text{C}$ . The reaction vessel temperature was warmed to a temperature of about  $23^\circ\text{C}$  to about  $25^\circ\text{C}$  and stirred for about 1 to 3 hours. The mixture was then cooled to  $0^\circ\text{C}$  and aged 1 h. The solid was filtered and washed with dry, ice cold acetonitrile (400 mL displacement wash, 550 mL slurry wash, and a 400 mL displacement wash). The solid was maintained under a  $\text{N}_2$  atmosphere during the filtration and washing to prevent hydrolysis of the chloride by adventitious  $\text{H}_2\text{O}$ . This yielded the crystalline form of the chloromethylimidazole hydrochloride.

#### EXAMPLE 2

Preparation of (+/-)-4-{4-(5'-fluoro-spiro[imidazolidine-4,1'-indan]-2,5-dion-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile trifluoroacetate salt

Step A: Preparation of (+/-)-5'-fluoro-spiro[imidazolidine-4,1'-indan]-2,5-dione

A solution of 5-fluoro-1-indanone (1.5 g, 10.0 mmol) in dimethyl-

formamide (16 mL) and water (1.0 mL) containing potassium cyanide (855 mg., 13 mmol) and ammonium carbonate (3.19 g, 30 mmol) was sealed in a screw-top glass tubular vessel and heated at 130 °C for 24 hours. The cooled reaction vessel was opened and the contents poured into water and acidified with concentrated HCl.

- 5 The resulting precipitate was collected by filtration, rinsed with water and dried. This solid was digested in ethyl acetate to give purified product as a racemate. m.p.: >260°C.

The enantiomers can be separated by preparative HPLC on a chiral Chiralpak AD column eluting with 20% ethanol and 80% hexane containing 0.1% diethylamine. The first enantiomer to elute is the (+)-enantiomer and the second the (-)-enantiomer.

Step B: Preparation of (+/-)- 4-{4-(5'-fluoro-spiro[imidazolidine-4,1'-indan]-2,5-dione-3-yl)methyl}imidazolylmethyl}benzonitrile

15 (+/-)-5'-Fluoro-spiro[imidazolidine-4,1'-indan]-2,5-dione (80 mg., 0.36 mmol) was dissolved in dry dimethylformamide (1 mL) and 60% sodium hydride in mineral oil (35 mg., 0.9 mmol) was added. The mixture was warmed at 50° C for 20 minutes to give a clear solution. After cooling the reaction to room temperature 1-(4-cyanobenzyl)-5-chloromethylimidazole hydrochloride salt, as described in Example 1, (95 mg; 0.35 mmol) was added. The reaction mixture was stirred for 24 hours. The reaction mixture was diluted with ethyl acetate and the organic solution was washed with aqueous Na<sub>2</sub>CO<sub>3</sub> and water (3X). The dried extract was evaporated and chromatographed on a Gilson HPLC using a 0-100% acetonitrile/water gradient containing 0.1% TFA. The appropriate fractions were combined and the solvent removed by lyophilization to give the racemic product as a glassy solid.

Found: C, 55.05; H, 4.12; N, 12.22.

### EXAMPLE 3

- 5 Preparation of (+/-)-4-{4-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile hydrochloride

10

Step A: Preparation of 7-fluoro-2,3-dihydrobenzopyran-4(4H)-one

15

A solution of sodium hydroxide (6.7 gm, 167 mmol) in water (20 mL) was added slowly to a neat mixture of 3-chlorophenol (10.2 gm, 79.5 mmol) and 3-bromopropionic acid (12.26 gm, 80 mmol) as the reaction became exothermic. The mixture was refluxed gently for two hours and then allowed to cool and become semi-solid. Water was added to dissolve the semi-solid and then was acidified with concentrated HCl. The product was extracted into diethyl ether and the ethereal

20 extract was dried over anhydrous magnesium sulfate, filtered and evaporated. The residue was slurried in 5:1 hexane/benzene to give crystalline 3-(3-chlorophenoxy) propionic acid. m.p.: 78-80°C.

25

A mixture of this phenoxy acid (4.82 gm, 24 mmol) and polyphosphoric acid (38 gm) was heated at 110°C for 0.75 hour. The cooled reaction mixture was poured into ice/water and the precipitated product was extracted into

methylene chloride. This solution was dried (MgSO<sub>4</sub>), filtered and evaporated to give a mixture of two isomers which were separated by chromatography on silica gel eluting with a 10-20% ethyl acetate/hexane gradient. The first component was isolated and recrystallized from hexane to give pure 7-chloro-2,3-dihydrobenzopyran-4(4H)-one. m.p.: 68-70°C. The second component was the 5-chloro isomer.

**Step B:** Preparation of (+/-)-7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dione.

10

A solution of 7-chloro-2,3-dihydrobenzopyran-4(4H)-one (913 mg., 5.0 mmol) in ethanol (6 mL) and water (6 mL) containing potassium cyanide (425 mg., 6.5 mmol) and ammonium carbonate (1.44 g, 15 mmol) was sealed in a screw-top glass tubular vessel and heated at 90°C for 16 hours. The cooled reaction vessel was opened and the contents poured into water and acidified with concentrated HCl. The resulting precipitate was collected by filtration, rinsed with water and dried. This solid was digested in ethyl acetate to give purified product as a racemate. m.p.: >260°C.

15

The enantiomers can be separated by preparative HPLC on a chiral Chiralpak AD column eluting with 20% ethanol and 80% hexane containing 0.1% diethylamine. The first enantiomer to elute is the (-)-enantiomer and the second was the (+)-enantiomer.

20

**Step C:** Preparation of (+/-)- 4-{4-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-ylmethyl)imidazol-1-ylmethyl} benzonitrile Hydrochloride

(+/-)-7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-  
 imidazolidine]-2',5'-dione (128 mg, 0.50 mmol) was dissolved in dry dimethyl-  
 formamide (1.5 mL) and 60% sodium hydride in mineral oil (55 mg, 1.38 mmol)  
 5 was added. The mixture was warmed at 50° C for 20 minutes to give a clear  
 solution. After cooling the reaction to room temperature 1-(4-cyanobenzyl)-5-  
 chloromethylimidazole hydrochloride salt, as described in Example 1, (134 mg,  
 0.50 mmol) was added. The reaction mixture was stirred for 24 hours. The reaction  
 mixture was diluted with ethyl acetate and the organic solution was washed  
 10 with aqueous Na<sub>2</sub>CO<sub>3</sub> and water (3X). The dried extract was evaporated and  
 chromatographed on a silica gel column eluting with a 1-4% methanol/ethyl acetate  
 (sat'd. NH<sub>4</sub>OH) gradient. The pure fractions were combined and the solvent  
 removed. The residue was dissolved in ethyl acetate and treated with 1M HCl/Et<sub>2</sub>O  
 give the racemic title compound as an amorphous hydrochloride salt..

#### EXAMPLE 4

20

Preparation of (+/-)-4-{4-[2-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-  
 imidazolidine]-2',5'-dione-3-yl)ethyl]-2-methylimidazol-1-ylmethyl}benzonitrile  
 hydrochloride

Step A: Preparation of (+/-)-7-chloro-4-tert-butoxycarbonylamino-2,3-dihydro-4H-benzopyran-4-carboxylic acid

5

A mixture of (+/-)-7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dione (380 mg, 1.5 mmol) from Example 2, Step B, in water (41 mL) containing barium hydroxide nonahydrate (2.3 gm, 7.5 mmol) was heated in a sealed screw-top vessel at 120°C for 20 hours. The cooled suspension was diluted to a volume of 150 mL with water and brought to a boil. Small chunks of dry ice were added carefully until no apparent change in the consistency of the suspension was noted. The hot suspension was filtered and the aqueous filtrate evaporated under vacuum. The residue was partially dissolved in warm water (30 mL) and three drops of sulfuric acid was added. This suspension was filtered and the aqueous solvent evaporated to give crude (+/-)-7-chloro-4-amino-2,3-dihydro-4H-benzopyran-4-carboxylic acid.

This material (370 mg) was dissolved in tetrahydrofuran (6 mL) and water (3 mL) and triethyl amine (0.35 mL, 2.5 mmol) was added followed by di-tert-butyl dicarbonate (643 mg, 2.45 mmol). The reaction mixture was stirred at room temperature for 2 days. The reaction was diluted with ethyl acetate, washed with 1 N HCL, dried (anhydrous sodium sulfate), filtered and the solvent evaporated. This residue was triturated with diethyl ether/hexane and a polar by-product removed by filtration. Upon slow evaporation of the ether, the racemic product crystallized out.

Step B: Preparation of 1-(4-cyanobenzyl)-4-(2-aminoethyl)imidazole dihydrochloride

N'-Pivaloyloxymethyl-N<sup>α</sup>-phthaloylhistamine (4.55 g, 12.8 mmol) was prepared as previously described (J. C. Emmett, F. H. Holloway, and J. L. Turner, *J. Chem. Soc., Perkin Trans. 1*, 1341, (1979)). α-Bromo-p-tolunitrile (3.77 g, 19.2 mmol) was dissolved in acetonitrile (70 mL). The solution was heated at 55°C for 4 h, cooled to room temperature, and filtered to remove the white solid. The

acetonitrile (30 mL) was concentrated to 1/2 its volume under reduced pressure and the solution was heated at 55°C overnight. The solution was cooled and filtered to give a white solid. The volume of the filtrate was reduced to 10 mL, the solution was heated at 55°C for 1 hr, then cooled to room temperature, diluted with EtOAc (25 mL) and filtered to obtain additional white solid. The solids were combined and dried.

1-Pivaloyloxymethyl-3-(4-cyanobenzyl)-4-(2-phthalimidoethyl)imidazolium bromide (6.13 g, 11.1 mmol) in methanol (100 mL) was saturated with ammonia gas while the temperature was maintained below 30°C. The solution was stirred for 1 hr, concentrated to dryness, and extracted with CH<sub>2</sub>Cl<sub>2</sub> (3x200 mL), dried (MgSO<sub>4</sub>), concentrated, and chromatographed (silica gel, 10:90:1 MeOH/CH<sub>2</sub>Cl<sub>2</sub>/NH<sub>4</sub>OH) to give 4-cyanobenzyl-N<sup>α</sup>-phthaloylhistamine.

3-(4-Cyanobenzyl)-N<sup>α</sup>-phthaloylhistamine (1.64 g, 4.61 mmol), and hydrazine (1.46 mL, 46.1 mmol) were dissolved in absolute EtOH (70 mL). The solution was concentrated after 1 hr and filtered to remove a white precipitate which was washed several times with EtOH. The filtrate was concentrated and the residue was chromatographed (silica gel, 10:90:1 MeOH/CH<sub>2</sub>Cl<sub>2</sub>/NH<sub>4</sub>OH) to give the title compound.

**Step C:** Preparation of 1-(4-cyanobenzyl)-2-methyl-4-(2-aminoethyl)imidazole dihydrochloride

Using the methods describe above but substituting 2-methylhistamine for histamine, the above compound is obtained.

**Step D:** Preparation of (+/-)-N-{2-[1-(4-cyanobenzyl)-2-methylimidazol-4-yl]ethyl}-7-chloro-4-amino-2,3-dihydro-4H-benzopyran-4-carboxamide

30

To a partial solution of (+/-)-7-chloro-4-tert-butoxycarbonyl-

amino-2,3-dihydro-4H-benzopyran-4-carboxylic acid (210 mg, 0.64 mmol) and 1-(4-cyanobenzyl)-2-methyl-4-(2-aminoethyl)imidazole dihydrochloride (200 mg, 0.64 mmol), as described above in Step C, in dry dimethylformamide (3.5 mL) was added 1-hydroxybenzotriazole hydrate 991 mg, 0.68 mmol, 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride (EDC) (134 mg, 0.70 mmol) and triethylamine (0.45 mL, 3.25 mmol) and this mixture was stirred at room temperature for 20 hours. The reaction was diluted with ethyl acetate and washed with saturated aqueous sodium carbonate, then water (3X), and dried over anhydrous sodium sulfate. The filtered solution was evaporated and the residue subjected to chromatography on silica gel eluting with a 1-5% methanol/ethyl acetate (NH<sub>4</sub>OH) gradient. Concentration of the appropriate fractions gave (+/-)-N-{2-[1-(4-cyanobenzyl)-2-methylimidazol-4-yl]ethyl}-7-chloro-4-tert-butoxycarbonylamino-2,3-dihydro-4H-benzopyran-4-carbox-amide as a viscous oil.

A portion of this material (74 mg, 0.134 mmol) was dissolved in ethyl acetate (5 mL) which was saturated with HCl gas and stirred for 2 hours. The solvent was removed under vacuum and the residue was dissolved in methylene chloride and washed with saturated aqueous sodium carbonate. The organic solution was dried (anhydrous sodium sulfate), filtered and the solvent evaporated to give the racemic title compound as a viscous residue.

Step E: Preparation of (+/-)-4-{4-[2-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-yl)ethyl]-2-methylimidazol-1-ylmethyl} benzonitrile

25

To a solution of (+/-)-N-{2-[1-(4-cyanobenzyl)-2-methylimidazol-4-yl]ethyl}-7-chloro-4-amino-2,3-dihydro-4H-benzopyran-4-carboxamide (64 mg, 0.14 mmol) in dry acetonitrile (2 mL) cooled in an ice bath was added triphosgene (13 mg, 0.044 mmol) to give an immediate precipitate. After stirring for one hour, triethyl-

30

- amine (0.07 mL, 0.5 mmol) was added. Over the next 24 hours the addition of triphosgene and triethylamine sequence was twice more repeated until starting material was no longer evident by tlc. Then the reaction was diluted with ethyl acetate and washed with aq. sodium carbonate. The organic layer was dried (anhydrous sodium sulfate), filtered, and the solvent removed. The residue was subjected to chromatography on silica gel and the product eluted with a 2-6% methanol/ethyl acetate(NH<sub>4</sub>OH) gradient. The purified product was dissolved in ethyl acetate and treated with 1N HCl/ether to give the racemic title compound as a crystalline hydrochloride salt, mp: >250°C.
- Anal. Calcd for C<sub>25</sub>H<sub>22</sub>ClN<sub>5</sub>O<sub>3</sub> • 1.0 HCl:

### EXAMPLE 5

15

Preparation of (+/-)-4-{4-(5'-chloro-spiro[indan-1,5'-oxazolidine]-2-on-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile hydrochloride

Step A: Preparation of (+/-)-5'-chloro-spiro[indan-1,5'-oxazolidine]-2-one

20

- A mixture of 5-chloro-1-indanone (666 mg, 4.0 mmol) and trimethylsilyl cyanide (0.6 mL, 4.5 mmol) containing zinc iodide (~2 mg) was stirred neat for 1.5 hours to give 1-trimethylsilyloxy-1-cyano-5-chloroindane as an oil which

was dissolved in diethyl ether (6 mL) and added dropwise to a solution of 1 M lithium aluminium hydride/tetrahydrofuran (7 mL, 7 mmol) and diethyl ether (5 mL). This solution was stirred at room temperature for two hours and then quenched by addition of saturated aqueous sodium sulfate. This mixture was diluted with more tetrahydrofuran and anhydrous sodium sulfate powder and filtered to remove the salts. The organic filtrate was evaporated to give 1-hydroxy-1-aminomethyl-5-chloroindane as an oil. This material was partially dissolved in acetonitrile (15 mL) containing triethylamine (1.4 mL, 10 mmol) and cooled in an ice bath. A solution of 20% phosgene/toluene (~2 mL) was added dropwise. After stirring for one hour the reaction was diluted with ethyl acetate and washed with water and aqueous sodium carbonate. The organic layer was dried (anhydrous sodium sulfate) and filtered through a pad of charcoal to decolorize the solution. Upon removal of the solvent under vacuum, the residue was triturated with diethyl ether/hexane to give the title compound as a racemic off-white solid, mp: 114-116°C.

15

**Step B:** Preparation of (+/-)-4-{4-(5'-chloro-spiro[indan-1,5'-oxazolidine]-2-on-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile hydrochloride

20

The title compound was prepared according to the procedure described in Example 2, Step C, except (+/-)-5'-chloro-spiro[indan-1,5'-oxazolidine]-2-one was substituted for (+/-)-7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dione. The hydrochloride salt of this racemate was obtained as a crystalline solid, mp: 172-175 °C.

## EXAMPLE 6

### *In vitro* inhibition of ras farnesyl transferase

*Transferase Assays.* Isoprenyl-protein transferase activity assays are carried out at 30°C unless noted otherwise. A typical reaction contains (in a final volume of 50 µL): [<sup>3</sup>H]farnesyl diphosphate, Ras protein, 50 mM HEPES, pH 7.5, 5 mM MgCl<sub>2</sub>, 5 mM dithiothreitol, 10 µM ZnCl<sub>2</sub>, 0.1% polyethyleneglycol (PEG) (15,000-20,000 mw) and isoprenyl-protein transferase. The FPTase employed in the assay is prepared by recombinant expression as described in Omer, C.A., Kral, A.M., Diehl, R.E., Prendergast, G.C., Powers, S., Allen, C.M., Gibbs, J.B. and Kohl, N.E. (1993) *Biochemistry* 32:5167-5176. After thermally pre-equilibrating the assay mixture in the absence of enzyme, reactions are initiated by the addition of isoprenyl-protein transferase and stopped at timed intervals (typically 15 min) by the addition of 1 M HCl in ethanol (1 mL). The quenched reactions are allowed to stand for 15 min (to complete the precipitation process). After adding 2 mL of 100% ethanol, the reactions are vacuum-filtered through Whatman GF/C filters. Filters are washed four times with 2 mL aliquots of 100% ethanol, mixed with scintillation fluid (10 mL) and then counted in a Beckman LS3801 scintillation counter.

For inhibition studies, assays are run as described above, except inhibitors are prepared as concentrated solutions in 100% dimethyl sulfoxide and then diluted 20 fold into the enzyme assay mixture. Substrate concentrations for inhibitor IC<sub>50</sub> determinations are as follows: FTase, 650 nM Ras-CVLS (SEQ.ID.NO.: 1), 100 nM farnesyl diphosphate.

The compounds of the instant invention described in the above Examples 1-5 were tested for inhibitory activity against human FPTase by the assay described above and were found to have IC<sub>50</sub> of ≤ 30 µM.

## EXAMPLE 7

### Modified *In vitro* GGTase inhibition assay

The modified geranylgeranyl-protein transferase inhibition assay is carried out at room temperature. A typical reaction contains (in a final volume of 50 µL): [<sup>3</sup>H]geranylgeranyl diphosphate, biotinylated Ras peptide, 50 mM HEPES, pH 7.5, a modulating anion (for example 10 mM glycerophosphate or 5mM ATP),

5 mM MgCl<sub>2</sub>, 10 μM ZnCl<sub>2</sub>, 0.1% PEG (15,000-20,000 mw), 2 mM dithiothreitol, and geranylgeranyl-protein transferase type I (GGTase). The GGTase-type I enzyme employed in the assay is prepared as described in U.S. Pat. No. 5,470,832, incorporated by reference. The Ras peptide is derived from the K4B-Ras protein and has the following sequence: biotinyl-GKKKKKKSKTKCVIM (single amino acid code) (SEQ. ID.NO.: 2). Reactions are initiated by the addition of GGTase and stopped at timed intervals (typically 15 min) by the addition of 200 μL of a 3 mg/mL suspension of streptavidin SPA beads (Scintillation Proximity Assay beads; Amersham) in 0.2 M sodium phosphate, pH 4, containing 50 mM EDTA, and 0.5% BSA. The quenched reactions are allowed to stand for 2 hours before analysis on a Packard TopCount scintillation counter.

For inhibition studies, assays are run as described above, except inhibitors are prepared as concentrated solutions in 100% dimethyl sulfoxide and then diluted 25 fold into the enzyme assay mixture. IC<sub>50</sub> values are determined with Ras peptide near K<sub>M</sub> concentrations. Enzyme and substrate concentrations for inhibitor IC<sub>50</sub> determinations are as follows: 75 pM GGTase-I; 1.6 μM Ras peptide, 100 μM geranylgeranyl diphosphate.

The compounds of the instant invention are tested for inhibitory activity against human GGTase type I by the assay described above.

20

### EXAMPLE 8

#### Cell-based *in vitro* ras farnesylation assay

The cell line used in this assay is a v-ras line derived from either Rat1 or NIH3T3 cells, which expressed viral Ha-ras p21. The assay is performed essentially as described in DeClue, J.E. et al., Cancer Research 51:712-717, (1991). Cells in 10 cm dishes at 50-75% confluency are treated with the test compound (final concentration of solvent, methanol or dimethyl sulfoxide, is 0.1%). After 4 hours at 37°C, the cells are labeled in 3 ml methionine-free DMEM supplemented with 10% regular DMEM, 2% fetal bovine serum and 400 μCi [<sup>35</sup>S]methionine (1000 Ci/mmol). After an additional 20 hours, the cells are lysed in 1 ml lysis buffer (1% NP40/20 mM HEPES, pH 7.5/5 mM MgCl<sub>2</sub>/1mM DTT/10 mg/ml aprotinin/2 mg/ml leupeptin/2 mg/ml antipain/0.5 mM PMSF) and the lysates cleared by centrifugation at 100,000 x g for 45 min. Aliquots of lysates containing equal numbers of acid-

30

precipitable counts are brought to 1 ml with IP buffer (lysis buffer lacking DTT) and immunoprecipitated with the ras-specific monoclonal antibody Y13-259 (Furth, M.E. et al., J. Virol. 43:294-304, (1982)). Following a 2 hour antibody incubation at 4°C, 200 µL of a 25% suspension of protein A-Sepharose coated with rabbit anti rat IgG is added for 45 min. The immunoprecipitates are washed four times with IP buffer (20 mM HEPES, pH 7.5/1 mM EDTA/1% Triton X-100/0.5% deoxycholate/0.1%/SDS/0.1 M NaCl) boiled in SDS-PAGE sample buffer and loaded on 13% acrylamide gels. When the dye front reached the bottom, the gel is fixed, soaked in Enlightening, dried and autoradiographed. The intensities of the bands corresponding to farnesylated and nonfarnesylated ras proteins are compared to determine the percent inhibition of farnesyl transfer to protein.

#### EXAMPLE 9

##### Cell-based *in vitro* growth inhibition assay

To determine the biological consequences of FPTase inhibition, the effect of the compounds of the instant invention on the anchorage-independent growth of Rat1 cells transformed with either a *v-ras*, *v-raf*, or *v-mos* oncogene is tested. Cells transformed by *v-Raf* and *v-Mos* may be included in the analysis to evaluate the specificity of compounds for Ras-induced cell transformation.

Rat 1 cells transformed with either *v-ras*, *v-raf*, or *v-mos* are seeded at a density of  $1 \times 10^4$  cells per plate (35 mm in diameter) in a 0.3% top agarose layer in medium A (Dulbecco's modified Eagle's medium supplemented with 10% fetal bovine serum) over a bottom agarose layer (0.6%). Both layers contain 0.1% methanol or an appropriate concentration of the compound (dissolved in methanol at 1000 times the final concentration used in the assay). The cells are fed twice weekly with 0.5 ml of medium A containing 0.1% methanol or the concentration of the instant compound. Photomicrographs are taken 16 days after the cultures are seeded and comparisons are made.

#### EXAMPLE 10

##### Construction of SEAP reporter plasmid pDSE100

The SEAP reporter plasmid, pDSE100 was constructed by ligating a restriction fragment containing the SEAP coding sequence into the plasmid pCMV-

RE-AKI. The SEAP gene is derived from the plasmid pSEAP2-Basic (Clontech, Palo Alto, CA). The plasmid pCMV-RE-AKI contains 5 sequential copies of the 'dyad symmetry response element' cloned upstream of a 'CAT-TATA' sequence derived from the cytomegalovirus immediate early promoter. The plasmid also contains a  
5 bovine growth hormone poly-A sequence.

The plasmid, pDSE100 was constructed as follows. A restriction fragment encoding the SEAP coding sequence was cut out of the plasmid pSEAP2-Basic using the restriction enzymes EcoR1 and HpaI. The ends of the linear DNA fragments were filled in with the Klenow fragment of E. coli DNA Polymerase I. The  
10 "blunt ended" DNA containing the SEAP gene was isolated by electrophoresing the digest in an agarose gel and cutting out the 1694 base pair fragment. The vector plasmid pCMV-RE-AKI was linearized with the restriction enzyme Bgl-II and the ends filled in with Klenow DNA Polymerase I. The SEAP DNA fragment was blunt end ligated into the pCMV-RE-AKI vector and the ligation products were  
15 transformed into DH5-alpha E. coli cells (Gibco-BRL). Transformants were screened for the proper insert and then mapped for restriction fragment orientation. Properly oriented recombinant constructs were sequenced across the cloning junctions to verify the correct sequence. The resulting plasmid contains the SEAP coding sequence downstream of the DSE and CAT-TATA promoter elements and upstream of the  
20 BGH poly-A sequence.

#### Alternative Construction of SEAP reporter plasmid, pDSE101

The SEAP reporter plasmid, pDSE101 is also constructed by ligating a restriction fragment containing the SEAP coding sequence into the plasmid pCMV-  
25 RE-AKI. The SEAP gene is derived from plasmid pGEM7zf(-)/SEAP.

The plasmid pDSE101 was constructed as follows: A restriction fragment containing part of the SEAP gene coding sequence was cut out of the plasmid pGEM7zf(-)/SEAP using the restriction enzymes Apa I and KpnI. The ends of the linear DNA fragments were chewed back with the Klenow fragment of  
30 E. coli DNA Polymerase I. The "blunt ended" DNA containing the truncated SEAP gene was isolated by electrophoresing the digest in an agarose gel and cutting out the 1910 base pair fragment. This 1910 base pair fragment was ligated into the plasmid pCMV-RE-AKI which had been cut with Bgl-II and filled in with E. coli Klenow fragment DNA polymerase. Recombinant plasmids were screened for insert

- orientation and sequenced through the ligated junctions. The plasmid pCMV-RE-AKI is derived from plasmid pCMVIE-AKI-DHFR (Whang, Y., Silberklang, M., Morgan, A., Munshi, S., Lenny, A.B., Ellis, R.W., and Kieff, E. (1987) *J. Virol.*, 61, 1796-1807) by removing an EcoRI fragment containing the DHFR and Neomycin markers.
- 5 Five copies of the fos promoter serum response element were inserted as described previously (Jones, R.E., Defeo-Jones, D., McAvoy, E.M., Vuocolo, G.A., Wegrzyn, R.J., Haskell, K.M. and Oliff, A. (1991) *Oncogene*, 6, 745-751) to create plasmid pCMV-RE-AKI.
- 10 The plasmid pGEM7zf(-)/SEAP was constructed as follows. The SEAP gene was PCR'd, in two segments from a human placenta cDNA library (Clontech) using the following oligos.
- Sense strand N-terminal SEAP: 5' GAGAGGGAATTCGGGCCCTTCCTGCAT  
 15 GCTGCTGCTGCTGCTGCTGCTGGGC 3' (SEQ.ID.NO.:3)
- Antisense strand N-terminal SEAP: 5' GAGAGAGCTCGAGGTAAACCCGGGT  
 GCGCGGCGTCGGTGGT 3' (SEQ.ID.NO.: 4)
- 20 Sense strand C-terminal SEAP: 5' GAGAGAGTCTAGAGTTAACCCGTGGTCC  
 CCGCGTTGCTTCCT 3' (SEQ.ID.NO.: 5)
- Antisense strand C-terminal SEAP: 5' GAAGAGGAAGCTTGGTACCGCCACTG  
 25 GGCTGTAGGTGGTGGCT 3' (SEQ.ID.NO.: 6)
- The N-terminal oligos (SEQ.ID.NO.: 4 and SEQ.ID.NO.: 5) were used to generate a 1560 bp N-terminal PCR product that contained EcoRI and HpaI restriction sites at the ends. The Antisense N-terminal oligo (SEQ.ID.NO.: 4) introduces an internal translation STOP codon within the SEAP gene along with the HpaI site. The C-  
 30 terminal oligos (SEQ.ID.NO.: 5 and SEQ.ID.NO.: 6) were used to amplify a 412 bp C-terminal PCR product containing HpaI and HindIII restriction sites. The sense strand C-terminal oligo (SEQ.ID.NO.: 5) introduces the internal STOP codon as well as the HpaI site. Next, the N-terminal amplicon was digested with EcoRI and HpaI while the C-terminal amplicon was digested with HpaI and HindIII. The two

fragments comprising each end of the SEAP gene were isolated by electrophoresing the digest in an agarose gel and isolating the 1560 and 412 base pair fragments.

These two fragments were then co-ligated into the vector pGEM7zf(-) (Promega) which had been restriction digested with EcoRI and HindIII and isolated on an agarose gel. The resulting clone, pGEM7zf(-)/SEAP contains the coding sequence for the SEAP gene from amino acids.

#### Construction of a constitutively expressing SEAP plasmid pCMV-SEAP

An expression plasmid constitutively expressing the SEAP protein was created by placing the sequence encoding a truncated SEAP gene downstream of the cytomegalovirus (CMV) IE<sub>1</sub> promoter. The expression plasmid also includes the CMV intron A region 5' to the SEAP gene as well as the 3' untranslated region of the bovine growth hormone gene 3' to the SEAP gene.

The plasmid pCMVIE-AKI-DHFR (Whang et al, 1987) containing the CMV immediate early promoter was cut with EcoRI generating two fragments. The vector fragment was isolated by agarose electrophoresis and religated. The resulting plasmid is named pCMV-AKI. Next, the cytomegalovirus intron A nucleotide sequence was inserted downstream of the CMV IE<sub>1</sub> promoter in pCMV-AKI. The intron A sequence was isolated from a genomic clone bank and subcloned into pBR322 to generate plasmid p16T-286. The intron A sequence was mutated at nucleotide 1856 (nucleotide numbering as in Chapman, B.S., Thayer, R.M., Vincent, K.A. and Haigwood, N.L., Nuc.Acids Res. 19, 3979-3986) to remove a SacI restriction site using site directed mutagenesis. The mutated intron A sequence was PCR'd from the plasmid p16T-287 using the following oligos.

25

Sense strand: 5' GGCAGAGCTCGTTTAGTGAACCGTCAG 3' (SEQ.ID.NO.: 7)

Antisense strand: 5' GAGAGATCTCAAGGACGGTGACTGCAG 3'  
(SEQ.ID.NO.: 8)

30

These two oligos generate a 991 base pair fragment with a SacI site incorporated by the sense oligo and a Bgl-II fragment incorporated by the antisense oligo. The PCR fragment is trimmed with SacI and Bgl-II and isolated on an agarose gel. The vector pCMV-AKI is cut with SacI and Bgl-II and the larger vector fragment

isolated by agarose gel electrophoresis. The two gel isolated fragments are ligated at their respective SacI and Bgl-II sites to create plasmid pCMV-AKI-InA.

The DNA sequence encoding the truncated SEAP gene is inserted into the pCMV-AKI-InA plasmid at the Bgl-II site of the vector. The SEAP gene is cut  
 5 out of plasmid pGEM7zf(-)/SEAP (described above) using EcoRI and HindIII. The fragment is filled in with Klenow DNA polymerase and the 1970 base pair fragment isolated from the vector fragment by agarose gel electrophoresis. The pCMV-AKI-InA vector is prepared by digesting with Bgl-II and filling in the ends with Klenow DNA polymerase. The final construct is generated by blunt end ligating the SEAP  
 10 fragment into the pCMV-AKI-InA vector. Transformants were screened for the proper insert and then mapped for restriction fragment orientation. Properly oriented recombinant constructs were sequenced across the cloning junctions to verify the correct sequence. The resulting plasmid, named pCMV-SEAP, contains a modified SEAP sequence downstream of the cytomegalovirus immediately early promoter IE-1  
 15 and intron A sequence and upstream of the bovine growth hormone poly-A sequence. The plasmid expresses SEAP in a constitutive manner when transfected into mammalian cells.

#### Cloning of a Myristylated viral-H-ras expression plasmid

20 A DNA fragment containing viral-H-ras can be PCR'd from plasmid "H-1" (Ellis R. et al. J. Virol. 36, 408, 1980) or "HB-11 (deposited in the ATCC under Budapest Treaty on August 27, 1997, and designated ATCC 209,218) using the following oligos.

#### 25 Sense strand:

5'TCTCCTCGAGGCCACCATGGGGAGTAGCAAGAGCAAGCCTAAGGACCC  
 CAGCCAGCGCCGGATGACAGAATACAAGCTTGTGGTGG 3'. (SEQ.ID.NO.:  
 9)

#### 30 Antisense:

5'CACATCTAGATCAGGACAGCACAGACTTGCAGC 3'.  
 (SEQ.ID.NO.: 10)

A sequence encoding the first 15 aminoacids of the v-src gene,  
 35 containing a myristylation site, is incorporated into the sense strand oligo. The sense strand oligo also optimizes the 'Kozak' translation initiation sequence immediately 5' to the ATG start site.

To prevent prenylation at the viral-*ras* C-terminus, cysteine 186 would be mutated to a serine by substituting a G residue for a C residue in the C-terminal antisense oligo. The PCR primer oligos introduce an XhoI site at the 5' end and a XbaI site at the 3' end. The XhoI-XbaI fragment can be ligated into the mammalian expression plasmid pCI (Promega) cut with XhoI and XbaI. This results in a plasmid in which the recombinant myr-viral-H-*ras* gene is constitutively transcribed from the CMV promoter of the pCI vector.

#### Cloning of a viral-H-*ras*-CVLL expression plasmid

A viral-H-*ras* clone with a C-terminal sequence encoding the amino acids CVLL can be cloned from the plasmid "H-1" (Ellis R. et al., *J. Virol.* 36, 408, 1980) or "HB-11" (deposited in the ATCC under Budapest Treaty on August 27, 1997, and designated ATCC 209,218) by PCR using the following oligos.

#### Sense strand:

5'TCTCCTCGAGGCCACCATGACAGAATACAAGCTTGTGGTGG-3'  
(SEQ.ID.NO.: 11)

#### Antisense strand:

5'CACTCTAGACTGGTGTCTAGAGCAGCACACACTTGCAGC-3' (SEQ.ID.NO.: 12)

The sense strand oligo optimizes the 'Kozak' sequence and adds an XhoI site. The antisense strand mutates serine 189 to leucine and adds an XbaI site. The PCR fragment can be trimmed with XhoI and XbaI and ligated into the XhoI-XbaI cut vector pCI (Promega). This results in a plasmid in which the mutated viral-H-*ras*-CVLL gene is constitutively transcribed from the CMV promoter of the pCI vector.

#### Cloning of c-H-*ras*-Leu61 expression plasmid

The human c-H-*ras* gene can be PCR'd from a human cerebral cortex cDNA library (Clontech) using the following oligonucleotide primers.

#### Sense strand:

5'-GAGAGAATTCGCCACCATGACGGAATATAAGCTGGTGG-3'  
(SEQ.ID.NO.: 13)

#### Antisense strand:

5'-GAGAGTCGACGCGTCAGGAGAGCACACACTTGC-3' (SEQ.ID.NO.: 14)

The primers will amplify a c-H-*ras* encoding DNA fragment with the primers contributing an optimized "Kozak" translation start sequence, an EcoRI site at the N-terminus and a Sal I site at the C-terminal end. After trimming the ends of the PCR product with EcoRI and Sal I, the c-H-*ras* fragment can be ligated into an EcoRI-Sal I cut mutagenesis vector pAlter-1 (Promega). Mutation of glutamine-61 to a leucine can be accomplished using the manufacturer's protocols and the following oligonucleotide:

5'-CCGCCGGCCTGGAGGAGTACAG-3' (SEQ.ID.NO.: 15)

After selection and sequencing for the correct nucleotide substitution, the mutated c-H-*ras*-Leu61 can be excised from the pAlter-1 vector, using EcoRI and Sal I, and be directly ligated into the vector pCI (Promega) which has been digested with EcoRI and Sal I. The new recombinant plasmid will constitutively transcribe c-H-*ras*-Leu61 from the CMV promoter of the pCI vector.

Cloning of a c-N-*ras*-Val-12 expression plasmid

The human c-N-*ras* gene can be PCR'd from a human cerebral cortex cDNA library (Clontech) using the following oligonucleotide primers.

Sense strand:

5'-GAGAGAATTCGCCACCATGACTGAGTACAAACTGGTGG-3'  
(SEQ.ID.NO.: 16)

Antisense strand:

5'-GAGAGTCGACTTGTTACATCACCACACATGGC-3' (SEQ.ID.NO.: 17)

The primers will amplify a c-N-*ras* encoding DNA fragment with the primers contributing an optimized 'Kozak' translation start sequence, an EcoRI site at the N-terminus and a Sal I site at the C-terminal end. After trimming the ends of the PCR product with EcoRI and Sal I, the c-N-*ras* fragment can be ligated into an EcoRI-Sal I cut mutagenesis vector pAlter-1 (Promega). Mutation of glycine-12 to a valine can be accomplished using the manufacturer's protocols and the following oligonucleotide:

5'-GTTGGAGCAGTTGGTGTGGG-3' (SEQ.ID.NO.: 18)

After selection and sequencing for the correct nucleotide substitution, the mutated c-N-*ras*-Val-12 can be excised from the pAlter-1 vector, using EcoRI and Sal I, and be directly ligated into the vector pCI (Promega) which has been digested with EcoRI and Sal I. The new recombinant plasmid will constitutively transcribe  
5 c-N-*ras*-Val-12 from the CMV promoter of the pCI vector.

#### Cloning of a c-K-*ras*-Val-12 expression plasmid

The human c-K-*ras* gene can be PCR'd from a human cerebral cortex cDNA library (Clontech) using the following oligonucleotide primers.  
10

#### Sense strand:

5'-GAGAGGTACCGCCACCATGACTGAATATAAACTTGTGG-3'  
(SEQ.ID.NO.: 19)

#### Antisense strand:

5'-CTCTGTCGACGTATTTACATAATTACACACTTTGTC-3' (SEQ.ID.NO.: 20)  
15

The primers will amplify a c-K-*ras* encoding DNA fragment with the primers contributing an optimized 'Kozak' translation start sequence, a KpnI site at the N-terminus and a Sal I site at the C-terminal end. After trimming the ends of the  
20 PCR product with Kpn I and Sal I, the c-K-*ras* fragment can be ligated into a KpnI - Sal I cut mutagenesis vector pAlter-1 (Promega). Mutation of cysteine-12 to a valine can be accomplished using the manufacturer's protocols and the following oligonucleotide:

25 5'-GTAGTTGGAGCTGTTGGCGTAGGC-3' (SEQ.ID.NO.: 21)

After selection and sequencing for the correct nucleotide substitution, the mutated c-K-*ras*-Val-12 can be excised from the pAlter-1 vector, using KpnI and  
30 Sal I, and be directly ligated into the vector pCI (Promega) which has been digested with KpnI and Sal I. The new recombinant plasmid will constitutively transcribe c-K-*ras*-Val-12 from the CMV promoter of the pCI vector.

#### SEAP assay

35 Human C33A cells (human epithelial carcinoma - ATTC collection) are seeded in 10cm tissue culture plates in DMEM + 10% fetal calf serum + 1X Pen/Strep + 1X glutamine + 1X NEAA. Cells are grown at 37°C in a 5% CO<sub>2</sub> atmosphere until they reach 50 -80% of confluency.

The transient transfection is performed by the CaPO<sub>4</sub> method (Sambrook et al., 1989). Thus, expression plasmids for H-*ras*, N-*ras*, K-*ras*, Myr-*ras* or H-*ras*-CVLL are co-precipitated with the DSE-SEAP reporter construct. For 10cm plates 600ml of CaCl<sub>2</sub>-DNA solution is added dropwise while vortexing to 600ml of

5 2X HBS buffer to give 1.2ml of precipitate solution (see recipes below). This is allowed to sit at room temperature for 20 to 30 minutes. While the precipitate is forming, the media on the C33A cells is replaced with DMEM (minus phenol red; Gibco cat. # 31053-028)+ 0.5% charcoal stripped calf serum + 1X (Pen/Strep, Glutamine and nonessential aminoacids). The CaPO<sub>4</sub>-DNA precipitate is added

10 dropwise to the cells and the plate rocked gently to distribute. DNA uptake is allowed to proceed for 5-6 hrs at 37°C under a 5% CO<sub>2</sub> atmosphere.

Following the DNA incubation period, the cells are washed with PBS and trypsinized with 1ml of 0.05% trypsin. The 1 ml of trypsinized cells is diluted into 10ml of phenol red free DMEM + 0.2% charcoal stripped calf serum + 1X

15 (Pen/Strep, Glutamine and NEAA ). Transfected cells are plated in a 96 well microtiter plate (100ml/well) to which drug, diluted in media, has already been added in a volume of 100ml. The final volume per well is 200ml with each drug concentration repeated in triplicate over a range of half-log steps.

Incubation of cells and test compound is for 36 hrs at 37°C under

20 CO<sub>2</sub>. At the end of the incubation period, cells are examined microscopically for evidence of cell distress. Next, 100 ml of media containing the secreted alkaline phosphatase is removed from each well and transferred to a microtube array for heat treatment at 65°C for 1 hr to inactivate endogenous alkaline phosphatases (but not the heat stable secreted phosphatase).

25 The heat treated media is assayed for alkaline phosphatase by a luminescence assay using the luminescence reagent CSPD® (Tropix, Bedford, Mass.). A volume of 50 ml media is combined with 200 ml of CSPD cocktail and incubated for 60 minutes at room temperature. Luminescence is monitored using an ML2200 microplate luminometer (Dynatech). Luminescence reflects the level of

30 activation of the fos reporter construct stimulated by the transiently expressed protein.

DNA-CaPO<sub>4</sub> precipitate for 10cm. plate of cells

Ras expression plasmid (1mg/ml)	10ml
DSE-SEAP Plasmid (1mg/ml)	2ml

Sheared Calf Thymus DNA (1mg/ml)	8ml
2M $\text{CaCl}_2$	74ml
$\text{dH}_2\text{O}$	506ml

5    2X HBS Buffer

280mM NaCl  
 10mM KCl  
 1.5mM  $\text{Na}_2\text{HPO}_4 \cdot 2\text{H}_2\text{O}$   
 12mM dextrose  
 10    50mM HEPES

 Make 1mM in  $\text{MgCl}_2$

EXAMPLE 11

25    The processing assays employed in this example and in Example 12  
 modifications of that described by DeClue et al [Cancer Research 51, 712-717, 1991].

K4B-Ras processing inhibition assay

PSN-1 (human pancreatic carcinoma) cells are used for analysis of  
 30    protein processing. Subconfluent cells in 100 mm dishes are fed with 3.5 ml of  
 media (methionine-free RPMI supplemented with 2% fetal bovine serum or cysteine-  
 free/methionine-free DMEM supplemented with 0.035 ml of 200 mM glutamine  
 (Gibco), 2% fetal bovine serum, respectively) containing the desired concentration of  
 test compound, lovastatin or solvent alone. Cells treated with lovastatin (5-10  $\mu\text{M}$ ), a  
 35    compound that blocks Ras processing in cells by inhibiting a rate-limiting step in the

isoprenoid biosynthetic pathway, serve as a positive control. Test compounds are prepared as 1000x concentrated solutions in DMSO to yield a final solvent concentration of 0.1%. Following incubation at 37°C for two hours 204  $\mu\text{Ci/ml}$  [ $^{35}\text{S}$ ]Pro-Mix (Amersham, cell labeling grade) is added.

5 After introducing the label amino acid mixture, the cells are incubated at 37°C for an additional period of time (typically 6 to 24 hours). The media is then removed and the cells are washed once with cold PBS. The cells are scraped into 1 ml of cold PBS, collected by centrifugation (10,000 x g for 10 sec at room temperature), and lysed by vortexing in 1 ml of lysis buffer (1% Nonidet P-40, 20 mM  
10 HEPES, pH 7.5, 150 mM NaCl, 1 mM EDTA, 0.5% deoxycholate, 0.1% SDS, 1 mM DTT, 10  $\mu\text{g/ml}$  AEBSF, 10  $\mu\text{g/ml}$  aprotinin, 2  $\mu\text{g/ml}$  leupeptin and 2  $\mu\text{g/ml}$  antipain). The lysate is then centrifuged at 15,000 x g for 10 min at 4°C and the supernatant saved.

For immunoprecipitation of Ki4B-Ras, samples of lysate supernatant  
15 containing equal amounts of protein are utilized. Protein concentration is determined by the Bradford method utilizing bovine serum albumin as a standard. The appropriate volume of lysate is brought to 1 ml with lysis buffer lacking DTT and 8  $\mu\text{g}$  of the pan Ras monoclonal antibody, Y13-259, added. The protein/antibody mixture is incubated on ice at 4°C for 24 hours. The immune complex is collected on pansorbin  
20 (Calbiochem) coated with rabbit antiserum to rat IgG (Cappel) by tumbling at 4°C for 45 minutes. The pellet is washed 3 times with 1 ml of lysis buffer lacking DTT and protease inhibitors and resuspended in 100  $\mu\text{l}$  elution buffer (10 mM Tris pH 7.4, 1% SDS). The Ras is eluted from the beads by heating at 95°C for 5 minutes, after which the beads are pelleted by brief centrifugation (15,000 x g for 30 sec. at room  
25 temperature).

The supernatant is added to 1 ml of Dilution Buffer 0.1% Triton X-100, 5 mM EDTA, 50 mM NaCl, 10 mM Tris pH 7.4) with 2 mg Kirsten-ras specific monoclonal antibody, c-K-ras Ab-1 (Calbiochem). The second protein/antibody mixture is incubated on ice at 4°C for 1-2 hours. The immune complex is  
30 collected on pansorbin (Calbiochem) coated with rabbit antiserum to rat IgG (Cappel) by tumbling at 4°C for 45 minutes. The pellet is washed 3 times with 1 ml of lysis buffer lacking DTT and protease inhibitors and resuspended in Laemmli sample buffer. The Ras is eluted from the beads by heating at 95°C for 5 minutes, after which the beads are pelleted by brief centrifugation. The supernatant is subjected to SDS-

PAGE on a 12% acrylamide gel (bis-acrylamide:acrylamide, 1:100), and the Ras visualized by fluorography.

#### hDJ processing inhibition assay

5 PSN-1 cells are seeded in 24-well assay plates. For each compound to be tested, the cells are treated with a minimum of seven concentrations in half-log steps. The final solvent (DMSO) concentration is 0.1%. A vehicle-only control is included on each assay plate. The cells are treated for 24 hours at 37°C / 5% CO<sub>2</sub>.

10 The growth media is then aspirated and the samples are washed with PBS. The cells are lysed with SDS-PAGE sample buffer containing 5% 2-mercaptoethanol and heated to 95°C for 5 minutes. After cooling on ice for 10 minutes, a mixture of nucleases is added to reduce viscosity of the samples.

The plates are incubated on ice for another 10 minutes.

15 The samples are loaded onto pre-cast 8% acrylamide gels and electrophoresed at 15 mA/gel for 3-4 hours. The samples are then transferred from the gels to PVDF membranes by Western blotting.

20 The membranes are blocked for at least 1 hour in buffer containing 2% nonfat dry milk. The membranes are then treated with a monoclonal antibody to HDJ-2 (Neomarkers Cat. # MS-225), washed, and treated with an alkaline phosphatase-conjugated secondary antibody. The membranes are then treated with a fluorescent detection reagent and scanned on a phosphorimager.

25 For each sample, the percent of total signal corresponding to the unprenylated species of HDJ (the slower-migrating species) is calculated by densitometry. Dose-response curves and IC<sub>50</sub> values are generated using 4-parameter curve fits in SigmaPlot software.

#### EXAMPLE 12

##### K4B-Ras processing inhibition assay

30 PSN-1 (human pancreatic carcinoma) cells are used for analysis of protein processing. Subconfluent cells in 150 mm dishes are fed with 20 ml of media (RPMI supplemented with 15% fetal bovine serum) containing the desired concentration of prenyl-protein transferase inhibitor or solvent alone. Cells treated with lovastatin (5-10 μM), a compound that blocks Ras processing in cells by 35 inhibiting a rate-limiting step in the isoprenoid biosynthetic pathway, serve as a

positive control. Test compounds are prepared as 1000x concentrated solutions in DMSO to yield a final solvent concentration of 0.1%.

The cells are incubated at 37°C for 24 hours, the media is then removed and the cells are washed twice with cold PBS. The cells are scraped into 2 ml of cold PBS, collected by centrifugation (10,000 x g for 5 min at 4°C) and frozen at -70°C. Cells are lysed by thawing and addition of lysis buffer (50 mM HEPES, pH 7.2, 50 mM NaCl, 1% CHAPS, 0.7 µg/ml aprotinin, 0.7 µg/ml leupeptin 300 µg/ml pefabloc, and 0.3 mM EDTA). The lysate is then centrifuged at 100,000 x g for 60 min at 4°C and the supernatant saved. The supernatant may be subjected to SDS-PAGE, HPLC analysis, and/or chemical cleavage techniques.

The lysate is applied to a HiTrap-SP (Pharmacia Biotech) column in buffer A (50 mM HEPES pH 7.2) and resolved by gradient in buffer A plus 1 M NaCl. Peak fractions containing Ki4B-Ras are pooled, diluted with an equal volume of water and immunoprecipitated with the pan Ras monoclonal antibody, Y13-259 linked to agarose. The protein/antibody mixture is incubated at 4°C for 12 hours. The immune complex is washed 3 times with PBS, followed by 3 times with water. The Ras is eluted from the beads by either high pH conditions (pH>10) or by heating at 95°C for 5 minutes, after which the beads are pelleted by brief centrifugation. The supernatant may be subjected to SDS-PAGE, HPLC analysis, and/or chemical cleavage techniques.

### EXAMPLE 13

#### Rap1 processing inhibition assay

25

##### Protocol A:

Cells are labeled, incubated and lysed as described in Example 11.

For immunoprecipitation of Rap1, samples of lysate supernatant containing equal amounts of protein are utilized. Protein concentration is determined by the bradford method utilizing bovine serum albumin as a standard. The appropriate volume of lysate is brought to 1 ml with lysis buffer lacking DTT and 2 µg of the Rap1 antibody, Rap1/Krev1 (121) (Santa Cruz Biotech), is added. The protein/antibody mixture is incubated on ice at 4°C for 1 hour. The immune complex is collected on pansorbin (Calbiochem) by tumbling at 4°C for 45 minutes. The pellet is washed 3 times with 1 ml of lysis buffer lacking DTT and protease inhibitors and

35

resuspended in 100 ml elution buffer (10 mM Tris pH 7.4, 1% SDS). The Rap1 is eluted from the beads by heating at 95°C for 5 minutes, after which the beads are pelleted by brief centrifugation (15,000 x g for 30 sec. at room temperature).

The supernatant is added to 1 ml of Dilution Buffer (0.1% Triton X-100, 5 mM EDTA, 50 mM NaCl, 10 mM Tris pH 7.4) with 2 mg Rap1 antibody, Rap1/Krev1 (121) (Santa Cruz Biotech). The second protein/antibody mixture is incubated on ice at 4°C for 1-2 hours. The immune complex is collected on pansorbin (Calbiochem) by tumbling at 4°C for 45 minutes. The pellet is washed 3 times with 1 ml of lysis buffer lacking DTT and protease inhibitors and resuspended in Laemmli sample buffer. The Rap1 is eluted from the beads by heating at 95°C for 5 minutes, after which the beads are pelleted by brief centrifugation. The supernatant is subjected to SDS-PAGE on a 12% acrylamide gel (bis-acrylamide:acrylamide, 1:100), and the Rap1 visualized by fluorography.

#### 15 Protocol B:

PSN-1 cells are passaged every 3-4 days in 10cm plates, splitting near-confluent plates 1:20 and 1:40. The day before the assay is set up,  $5 \times 10^6$  cells are plated on 15cm plates to ensure the same stage of confluency in each assay. The media for these cells is RPMI 1640 (Gibco), with 15% fetal bovine serum and 1x Pen/Strep antibiotic mix.

The day of the assay, cells are collected from the 15cm plates by trypsinization and diluted to 400,000 cells/ml in media. 0.5ml of these diluted cells are added to each well of 24-well plates, for a final cell number of 200,000 per well. The cells are then grown at 37°C overnight.

25 The compounds to be assayed are diluted in DMSO in 1/2-log dilutions. The range of final concentrations to be assayed is generally 0.1-100  $\mu$ M. Four concentrations per compound is typical. The compounds are diluted so that each concentration is 1000x of the final concentration (i.e., for a 10  $\mu$ M data point, a 10mM stock of the compound is needed).

30 2  $\mu$ L of each 1000x compound stock is diluted into 1ml media to produce a 2X stock of compound. A vehicle control solution (2  $\mu$ L DMSO to 1ml media), is utilized. 0.5 ml of the 2X stocks of compound are added to the cells.

After 24 hours, the media is aspirated from the assay plates. Each well is rinsed with 1ml PBS, and the PBS is aspirated. 180  $\mu$ L SDS-PAGE sample buffer (Novex) containing 5% 2-mercaptoethanol is added to each well. The plates are

heated to 100°C for 5 minutes using a heat block containing an adapter for assay plates. The plates are placed on ice. After 10 minutes, 20µL of an RNase/DNase mix is added per well. This mix is 1mg/ml DNaseI (Worthington Enzymes), 0.25 mg/ml RNase A (Worthington Enzymes), 0.5M Tris-HCl pH8.0 and 50mM MgCl<sub>2</sub>.

- 5 The plate is left on ice for 10 minutes. Samples are then either loaded on the gel, or stored at -70°C until use.

- Each assay plate (usually 3 compounds, each in 4-point titrations, plus controls) requires one 15-well 14% Novex gel. 25µl of each sample is loaded onto the gel. The gel is run at 15mA for about 3.5 hours. It is important to run the gel far enough so that there will be adequate separation between 21kd (Rap1) and 29kd (Rab6).
- 10

- The gels are then transferred to Novex pre-cut PVDF membranes for 1.5 hours at 30V (constant voltage). Immediately after transferring, the membranes are blocked overnight in 20ml Western blocking buffer (2% nonfat dry milk in Western wash buffer (PBS + 0.1% Tween-20). If blocked over the weekend, 0.02% sodium azide is added. The membranes are blocked at 4°C with slow rocking.
- 15

- The blocking solution is discarded and 20ml fresh blocking solution containing the anti Rap1a antibody (Santa Cruz Biochemical SC1482) at 1:1000 (diluted in Western blocking buffer) and the anti Rab6 antibody (Santa Cruz Biochemical SC310) at 1:5000 (diluted in Western blocking buffer) are added. The membranes are incubated at room temperature for 1 hour with mild rocking. The blocking solution is then discarded and the membrane is washed 3 times with Western wash buffer for 15 minutes per wash. 20ml blocking solution containing 1:1000 (diluted in Western blocking buffer) each of two alkaline phosphatase conjugated antibodies (Alkaline phosphatase conjugated Anti-goat IgG and Alkaline phosphatase conjugated anti-rabbit IgG [Santa Cruz Biochemical]) is then added. The membrane is incubated for one hour and washed 3x as above.
- 20
- 25

- About 2ml per gel of the Amersham ECF detection reagent is placed on an overhead transparency (ECF) and the PVDF membranes are placed face down onto the detection reagent. This is incubated for one minute, then the membrane is placed onto a fresh transparency sheet.
- 30

The developed transparency sheet is scanned on a phosphorimager and the Rap1a Minimum Inhibitory Concentration is determined from the lowest concentration of compound that produces a detectable Rap1a Western signal. The

Rap1a antibody used recognizes only unprenylated/unprocessed Rap1a, so that the presence of a detectable Rap1a Western signal is indicative of inhibition of Rap1a prenylation.

5     Protocol C:

This protocol allows the determination of an EC<sub>50</sub> for inhibition of processing of Rap1a. The assay is run as described in Protocol B with the following modifications. 20 µl of sample is run on pre-cast 10-20% gradient acrylamide mini gels (Novex Inc.) at 15 mA/gel for 2.5-3 hours. Prenylated and unprenylated forms of Rap1a are detected by blotting with a polyclonal antibody (Rap1/Krev-1 Ab#121; Santa Cruz Research Products #sc-65), followed by an alkaline phosphatase-conjugated anti-rabbit IgG antibody. The percentage of unprenylated Rap1a relative to the total amount of Rap1a is determined by peak integration using Imagequant<sup>®</sup> software (Molecular Dynamics). Unprenylated Rap1a is distinguished from  
15     prenylated protein by virtue of the greater apparent molecular weight of the prenylated protein. Dose-response curves and EC<sub>50</sub> values are generated using 4-parameter curve fits in SigmaPlot software.

EXAMPLE 14

20

*In vivo* tumor growth inhibition assay (nude mouse)

*In vivo* efficacy as an inhibitor of the growth of cancer cells may be confirmed by several protocols well known in the art. Examples of such *in vivo* efficacy studies are described by N. E. Kohl et al. (*Nature Medicine*, 1:792-797  
25     (1995)) and N. E. Kohl et al. (*Proc. Nat. Acad. Sci. U.S.A.*, 91:9141-9145 (1994)).

Rodent fibroblasts transformed with oncogenically mutated human Ha-ras or Ki-ras (10<sup>6</sup> cells/animal in 1 ml of DMEM salts) are injected subcutaneously into the left flank of 8-12 week old female nude mice (Harlan) on day 0. The mice in each oncogene group are randomly assigned to a vehicle or compound treatment  
30     group. Animals are dosed subcutaneously starting on day 1 and daily for the duration of the experiment. Alternatively, the prenyl-protein transferase inhibitor may be administered by a continuous infusion pump. Compound or vehicle is delivered in

a total volume of 0.1 ml. Tumors are excised and weighed when all of the vehicle-treated animals exhibited lesions of 0.5 - 1.0 cm in diameter, typically 11-15 days after the cells were injected. The average weight of the tumors in each treatment group for each cell line is calculated.

5

WHAT IS CLAIMED IS:

1. A compound of formula A-1:

the formula A-1:

5

wherein

$X^1$  is  $(CR^{1a}_2)_n A^1 (CR^{1a}_2)_n$ ;

10

$X^2$  is  $(CR^{1b}_2)_p A^2 (CR^{1b}_2)_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

15

- a) hydrogen,
- b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- f)  $R^{6a}S(O)_m$ -,
- g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}$ -,
- 20 k)  $(R^{10})_2NC(O)NR^{10}$ -,

- l)  $R^{10}C(O)-$ ,  
 m)  $-N(R^{10})_2$ ,  
 n)  $R^{10}OC(O)-$ ,  
 o)  $R^{10}OC(O)NR^{10}-$ ,  
 5 p) unsubstituted or substituted  $C_1-C_6$  alkyl, wherein the substituent on the substituted  $C_1-C_6$  alkyl is selected from unsubstituted or substituted aryl, unsubstituted or substituted heterocycle, unsubstituted or substituted  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted  $C_2-C_6$  alkenyl, unsubstituted or substituted  $C_2-C_6$  alkynyl,  $R^{10}O-$ ,  $R^{6a}S(O)_m$ ,  
 10 halo,  $C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}-$ ,  $(R^{10})_2NC(O)NR^{10}-$ ,  $R^{10}C(O)-$ ,  $-N(R^{10})_2$ ,  $R^{10}OC(O)-$ , and  $R^{10}OC(O)NR^{10}-$ ;

$A^1$  and  $A^2$  are independently selected from:

- a) a bond,  
 15 b) O,  
 c)  $C=O$ ,  
 d)  $S(O)_m$ ,  
 e)  $NR^{10}$ ,  
 f)  $C(O)NR^{10}$ ,  
 20 g)  $NR^{10}C(O)$ ,  
 h)  $OC(O)$ , and  
 i)  $C(O)O$ ;

$R^2$  is independently selected from

- 25 a) hydrogen,  
 b) CN,  
 c)  $NO_2$ ,  
 d) halogen,  
 e) aryl, unsubstituted or substituted,  
 30 f) heterocycle, unsubstituted or substituted,  
 g)  $C_1-C_6$  alkyl, unsubstituted or substituted,  
 h)  $OR^{10}$ ,  
 i)  $N_3$ ,  
 j)  $R^{6a}S(O)_m$

- k)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,  
 l)  $C_2-C_6$  alkenyl, unsubstituted or substituted,  
 m)  $C_2-C_6$  alkynyl, unsubstituted or substituted,  
 n)  $(R^{10})_2NC(O)NR^{10}-$ ,  
 5 o)  $R^{10}C(O)-$ ,  
 p)  $R^{10}C(O)NR^{10}-$ ,  
 q)  $R^{10}OC(O)-$ ,  
 r)  $-N(R^{10})_2$ , and  
 s)  $R^{10}OC(O)NR^{10}-$ ;

10

$R^3$  is independently selected from:

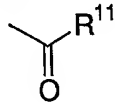

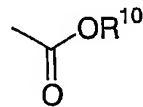

- a) hydrogen,  
 b) halo,  
 c)  $C_1-C_6$  alkyl, unsubstituted or substituted,  
 15 d) CN,  
 e)  $NO_2$ ,  
 f) aryl, unsubstituted or substituted,  
 g) heterocycle, unsubstituted or substituted,  
 h)  $OR^{10}$ ,  
 20 i)  $R^{6a}S(O)_m$ ,  
 j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,  
 k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,  
 l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,  
 m)  $(R^{10})_2NC(O)NR^{10}-$ ,  
 25 n)  $R^{10}C(O)-$ , and  
 o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- a) hydrogen,  
 30 b)  $C_1-C_6$  alkyl, unsubstituted or substituted,  
 c) aryl, unsubstituted or substituted,  
 d) heterocycle, unsubstituted or substituted, and  
 e) aralkyl, unsubstituted or substituted;

$R^6$  and  $R^7$  are independently selected from:

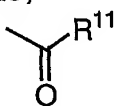

H,  $C_1$ - $C_6$  alkyl,  $C_3$ - $C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1$ - $C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- 5 a)  $C_1$ - $C_6$  alkoxy,
- b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,
- c) halogen,
- d) HO,
- e) 
- f) 
- 10 g)  $-S(O)_m R^{6a}$ , and
- h)  $N(R^{10})_2$ ; or

$R^6$  and  $R^7$  may be joined in a ring;

15

$R^{6a}$  is independently selected from:

- a)  $C_3$ - $C_6$  cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:
  - 1)  $C_1$ - $C_4$  alkoxy,
  - 20 2) aryl or heterocycle,
  - 3) halogen,
  - 4) HO,
  - 5) 
  - 6)  $SO_2 R^{11}$ ,
  - 7)  $N(R^{10})_2$ ; and
- 25 b)  $C_1$ - $C_6$  alkyl, unsubstituted or substituted with one or more of the following:

- 1) -C<sub>1-4</sub> alkoxy,
- 2) aryl or heterocycle,
- 3) halogen,
- 4) -OH,

and

- 6) -N(R<sup>10</sup>)<sub>2</sub>;

R<sup>8</sup> is independently selected from:

- a) hydrogen,

- 30 R<sup>10</sup>OC(O)NR<sup>10</sup>-;

R<sup>10</sup> is independently selected from:

- 5
- a) hydrogen,
  - b) unsubstituted or substituted  $C_1-C_6$  alkyl,
  - c)  $C_3-C_6$  cycloalkyl,
  - d)  $C_1-C_6$  perfluoroalkyl,
  - e) trifluoromethyl,
  - f) 2,2,2-trifluoroethyl,
  - g) unsubstituted or substituted heteroaryl,
  - h) unsubstituted or substituted aryl,
  - i) unsubstituted or substituted aralkyl, and
  - 10 j) unsubstituted or substituted heteroaralkyl;

$R^{11}$  is independently selected from

- 15
- a) unsubstituted or substituted  $C_1-C_6$  alkyl,
  - b) unsubstituted or substituted aralkyl,
  - c) unsubstituted or substituted heterocycle,
  - d) unsubstituted or substituted aryl, and
  - e) unsubstituted or substituted heteroaralkyl;

20  $G^1$  and  $G^2$  are independently selected from  $CH_2$  or oxygen, provided at least one is oxygen;

J is  $CH_2$ , NH or oxygen;

M is  $CH_2$ , NH,  $S(O)_m$ , or oxygen;

25

V is selected from:

- 30
- a) hydrogen,
  - b) heterocycle,
  - c) aryl,
  - d)  $C_1-C_{20}$  alkyl wherein from 0 to 4 carbon atoms are replaced with a heteroatom selected from O,  $S(O)_m$ , and N, and
  - e)  $C_2-C_{20}$  alkenyl,

provided that V is not hydrogen if  $A^1$  is  $S(O)_m$  and n is 0;

W is a heterocycle;

Z is C(O) or CH<sub>2</sub>;

- 5    m is            0, 1 or 2;  
      n is            0, 1, 2, 3, 4, 5 or 6;  
      p is            0, 1, 2, 3, 4, 5 or 6;  
      r is            0 to 5, provided that r is 0 when V is hydrogen;  
      s is            0, 1, 2, 3 or 4;  
 10    t is            0, 1, 2, 3, or 4;  
      v is            0, 1, 2, or 3;  
      w is            0, 1, or 2; and  
      z is            0 or 1;

- 15    or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

2.    The compound, according to Claim 1, of formula A:

20    wherein

$X^1$  is  $(CR^{1a}_2)_n A^1 (CR^{1a}_2)_n$ ;

$X^2$  is  $(CR^{1b}_2)_p A^2 (CR^{1b}_2)_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

- a) hydrogen,
- b) unsubstituted or substituted aryl,
- 5 c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- f)  $R^{6a}S(O)_m$ -,
- g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- 10 h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}$ -,
- k)  $(R^{10})_2NC(O)NR^{10}$ -,
- l)  $R^{10}C(O)$ -,
- 15 m)  $-N(R^{10})_2$ ,
- n)  $R^{10}OC(O)$ -,
- o)  $R^{10}OC(O)NR^{10}$ -,
- p) unsubstituted or substituted  $C_1$ - $C_6$  alkyl, wherein the substituent on the substituted  $C_1$ - $C_6$  alkyl is selected from unsubstituted or substituted aryl, unsubstituted or substituted heterocycle, unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl, unsubstituted or substituted  $C_2$ - $C_6$  alkenyl, unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,  $R^{10}O$ -,  $R^{6a}S(O)_m$ , halo,  $C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}$ -,  $(R^{10})_2NC(O)NR^{10}$ -,  $R^{10}C(O)$ -,  $-N(R^{10})_2$ ,  $R^{10}OC(O)$ -, and  $R^{10}OC(O)NR^{10}$ -;
- 20
- 25

$A^1$  and  $A^2$  are independently selected from:

- a) a bond,
- b) O,
- c)  $C=O$ ,
- 30 d)  $S(O)_m$ ,
- e)  $NR^{10}$ ,
- f)  $C(O)NR^{10}$ ,
- g)  $NR^{10}C(O)$ ,
- h)  $OC(O)$ , and

i)  $C(O)O$ ;

$R^2$  is independently selected from

- 10

$R^{10}$  is independently selected from:

- 15
- a) hydrogen,
  - b) unsubstituted or substituted  $C_1-C_6$  alkyl,
  - c)  $C_3-C_6$  cycloalkyl,
  - d)  $C_1-C_6$  perfluoroalkyl,
  - e) trifluoromethyl,
  - f) 2,2,2-trifluoroethyl,
  - g) unsubstituted or substituted heteroaryl,
  - h) unsubstituted or substituted aryl,
  - i) unsubstituted or substituted aralkyl, and
  - j) unsubstituted or substituted heteroaralkyl;
- 20

$R^{11}$  is independently selected from

- 25
- a) unsubstituted or substituted  $C_1-C_6$  alkyl,
  - b) unsubstituted or substituted aralkyl,
  - c) unsubstituted or substituted heterocycle,
  - d) unsubstituted or substituted aryl, and
  - e) unsubstituted or substituted heteroaralkyl;
- 30

$G^1$  and  $G^2$  are independently selected from  $CH_2$  or oxygen, provided at least one is oxygen;

J is  $CH_2$ , NH or oxygen;

M is  $\text{CH}_2$ , NH,  $\text{S(O)}_m$ , or oxygen;

V is selected from:

- 5           a) hydrogen,  
             b) heterocycle,  
             c) aryl,  
             d)  $\text{C}_1\text{-C}_{20}$  alkyl wherein from 0 to 4 carbon atoms are replaced with a  
                     heteroatom selected from O,  $\text{S(O)}_m$ , and N, and  
 10           e)  $\text{C}_2\text{-C}_{20}$  alkenyl,  
 provided that V is not hydrogen if  $\text{A}^1$  is  $\text{S(O)}_m$  and n is 0;

W is a heterocycle;

- 15    m is           0, 1 or 2;  
       n is           0, 1, 2, 3, 4, 5 or 6;  
       p is           0, 1, 2, 3, 4, 5 or 6;  
       r is           0 to 5, provided that r is 0 when V is hydrogen;  
       s is           0, 1, 2, 3 or 4;  
 20    t is           0, 1, 2, 3, or 4;  
       v is           0, 1, 2, or 3;  
       w is           0, 1, or 2; and  
       z is           0 or 1;  
 25    or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

3. The compound, according to Claim 1, of formula A:

wherein

$X^1$  is  $(CR^{1a}_2)_n A^1 (CR^{1a}_2)_n$ ;

5

$X^2$  is  $(CR^{1b}_2)_p A^2 (CR^{1b}_2)_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

- a) hydrogen,
- 10 b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- f)  $R^{6a}S(O)_m$ -,
- 15 g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}$ -,
- k)  $(R^{10})_2NC(O)NR^{10}$ -,
- 20 l)  $R^{10}C(O)$ -,
- m)  $-N(R^{10})_2$ ,
- n)  $R^{10}OC(O)$ -,
- o)  $R^{10}OC(O)NR^{10}$ -,
- p) unsubstituted or substituted  $C_1$ - $C_6$  alkyl, wherein the substituent

on the substituted  $C_1$ - $C_6$  alkyl is selected from unsubstituted or substituted aryl, unsubstituted or substituted heterocycle, unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl, unsubstituted or substituted  $C_2$ - $C_6$  alkenyl, unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,  $R^{10}O$ -,  $R^{6a}S(O)_m$ ,  
 5 halo,  $C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}$ -,  $(R^{10})_2NC(O)NR^{10}$ -,  $R^{10}C(O)$ -,  
 $-N(R^{10})_2$ ,  $R^{10}OC(O)$ -, and  $R^{10}OC(O)NR^{10}$ -;

$A^1$  and  $A^2$  are independently selected from:

- 10 a) a bond,
- b) O,
- c)  $C=O$ ,
- d)  $S(O)_m$ ,
- e)  $NR^{10}$ ,
- f)  $C(O)NR^{10}$ ,
- 15 g)  $NR^{10}C(O)$ ,
- h)  $OC(O)$ , and
- i)  $C(O)O$ ;

$R^2$  is independently selected from

- 20 a) hydrogen,
- b) CN,
- c)  $NO_2$ ,
- d) halogen,
- e) aryl, unsubstituted or substituted,
- 25 f) heterocycle, unsubstituted or substituted,
- g)  $C_1$ - $C_6$  alkyl, unsubstituted or substituted,
- h)  $OR^{10}$ ,
- i)  $N_3$ ,
- j)  $R^{6a}S(O)_m$ ,
- 30 k)  $C_3$ - $C_{10}$  cycloalkyl, unsubstituted or substituted,
- l)  $C_2$ - $C_6$  alkenyl, unsubstituted or substituted,
- m)  $C_2$ - $C_6$  alkynyl, unsubstituted or substituted,
- n)  $(R^{10})_2NC(O)NR^{10}$ -,
- o)  $R^{10}C(O)$ -,

- p)  $R^{10}C(O)NR^{10}-$ ,
- q)  $R^{10}OC(O)-$ ,
- r)  $-N(R^{10})_2$ , and
- s)  $R^{10}OC(O)NR^{10}-$ ;

5

$R^3$  is independently selected from:

- a) hydrogen,
- b) halo,
- c)  $C_1-C_6$  alkyl, unsubstituted or substituted;
- 10 d) CN,
- e)  $NO_2$ ,
- f) aryl, unsubstituted or substituted,
- g) heterocycle, unsubstituted or substituted,
- h)  $OR^{10}$ ,
- 15 i)  $R^{6a}S(O)_m$ ,
- j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
- k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
- l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
- m)  $(R^{10})_2NC(O)NR^{10}-$ ,
- 20 n)  $R^{10}C(O)-$ , and
- o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- a) hydrogen,
- 25 b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- c) aryl, unsubstituted or substituted,
- d) heterocycle, unsubstituted or substituted; and
- e) aralkyl, unsubstituted or substituted;

30  $R^6$  and  $R^7$  are independently selected from:

H,  $C_1-C_6$  alkyl,  $C_3-C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1-C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- a)  $C_1-C_6$  alkoxy,

b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,

c) halogen,

d) HO,

5

g)  $-\text{S}(\text{O})_m\text{R}^{6a}$ , and

h)  $\text{N}(\text{R}^{10})_2$ ; or

$\text{R}^6$  and  $\text{R}^7$  may be joined in a ring;

10  $\text{R}^{6a}$  is independently selected from:

a) C3-6 cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:

1) C1-4 alkoxy,

2) aryl or heterocycle,

15

3) halogen,

4) HO,

6)  $\text{SO}_2\text{R}^{11}$ ,

7)  $\text{N}(\text{R}^{10})_2$ ; and

20

b) C1-C6 alkyl, unsubstituted or substituted with one or more of the following:

1) -C1-4 alkoxy,

2) aryl or heterocycle,

3) halogen,

25

4) -OH,

$R^8$  is independently selected from:

- 5 a) hydrogen,  
 b) unsubstituted or substituted  $C_1$ - $C_4$  perfluoroalkyl,  
 c) halo,  
 d)  $R^{10}O-$ ,  
 e)  $-C(O)NR^6R^7$ ,  
 10 f)  $R^{10}C(O)NR^{10}-$ ,  
 g)  $(R^{10})_2NC(O)NR^{10}-$ ,  
 h)  $R^{10}C(O)-$ ,  
 i)  $R^{10}OC(O)-$ ,  
 j)  $R^{10}OC(O)NR^{10}-$ ,  
 15 k)  $-N(R^{10})_2$ , and  
 l)  $C_1$ - $C_6$  alkyl, unsubstituted or substituted by  $C_1$ - $C_4$  perfluoroalkyl, F, Cl, Br,  $R^{10}O-$ ,  $R^{6a}S(O)_m-$ ,  $-C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}-$ , CN,  $(R^{10})_2NC(O)NR^{10}-$ ,  $R^{10}C(O)-$ ,  $R^{10}OC(O)-$ ,  $N_3$ ,  $-N(R^{10})_2$ , and  $R^{10}OC(O)NR^{10}-$ ;

20  $R^{10}$  is independently selected from:

- a) hydrogen,  
 b) unsubstituted or substituted  $C_1$ - $C_6$  alkyl,  
 c)  $C_3$ - $C_6$  cycloalkyl,  
 25 d)  $C_1$ - $C_6$  perfluoroalkyl,  
 e) trifluoromethyl,  
 f) 2,2,2-trifluoroethyl,  
 g) unsubstituted or substituted heteroaryl,  
 h) unsubstituted or substituted aryl,  
 30 i) unsubstituted or substituted aralkyl, and  
 j) unsubstituted or substituted heteroaralkyl;

R<sup>11</sup> is independently selected from

- a) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
- b) unsubstituted or substituted aralkyl,
- c) unsubstituted or substituted heterocycle,
- 5 d) unsubstituted or substituted aryl, and
- e) unsubstituted or substituted heteroaralkyl;

G<sup>1</sup> and G<sup>2</sup> are independently selected from CH<sub>2</sub> or oxygen, provided at least one is oxygen;

10

J is NH or oxygen;

M is CH<sub>2</sub>, S(O)<sub>m</sub> or oxygen;

15 V is selected from:

- a) heterocycle,
- b) aryl, and
- c) C<sub>1</sub>-C<sub>20</sub> alkyl wherein from 0 to 4 carbon atoms are replaced with a heteroatom selected from O, S(O)<sub>m</sub>, and N;

20

W is a heterocycle selected from pyrrolidinyl, imidazolyl, pyridinyl, thiazolyl, pyridonyl, 2-oxopiperidinyl, indolyl, quinolinyl, isoquinolinyl, and thienyl;

m is 0, 1 or 2;

25 n is 0, 1, 2, 3, 4, 5 or 6;

p is 0, 1, 2, 3, 4, 5 or 6;

r is 0 to 5;

s is 0, 1, 2, 3 or 4;

t is 0, 1, 2, 3, or 4;

30 v is 0, 1, 2, or 3;

w is 0, 1, or 2; and

z is 0 or 1;

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

4. The compound, according to Claim 1, of formula B:

5

wherein

$X^1$  is  $(CR^{1a}_2)_n A^1 (CR^{1a}_2)_n$ ;

10  $X^2$  is  $(CR^{1b}_2)_p A^2 (CR^{1b}_2)_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

- a) hydrogen,
- b) unsubstituted or substituted aryl,
- 15 c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O-$ ,
- f)  $R^{6a}S(O)_m-$ ,
- g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- 20 h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}-$ ,
- k)  $(R^{10})_2NC(O)NR^{10}-$ ,
- l)  $R^{10}C(O)-$ ,

- 5
- m)  $-N(R^{10})_2$ ,  
 n)  $R^{10}OC(O)-$ ,  
 o)  $R^{10}OC(O)NR^{10}-$ ,  
 p) unsubstituted or substituted  $C_1-C_6$  alkyl, wherein the substituent  
 on the substituted  $C_1-C_6$  alkyl is selected from unsubstituted or  
 substituted aryl, unsubstituted or substituted heterocycle, unsubstituted  
 or substituted  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted  $C_2-C_6$   
 alkenyl, unsubstituted or substituted  $C_2-C_6$  alkynyl,  $R^{10}O-$ ,  $R^{6a}S(O)_m$ ,  
 halo,  $C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}-$ ,  $(R^{10})_2NC(O)NR^{10}-$ ,  $R^{10}C(O)-$ ,  
 10  $-N(R^{10})_2$ ,  $R^{10}OC(O)-$ , and  $R^{10}OC(O)NR^{10}-$ ;

$A^1$  and  $A^2$  are independently selected from:

- 15
- a) a bond,  
 b) O,  
 c)  $C=O$ ,  
 d)  $S(O)_m$ ,  
 e)  $NR^{10}$ ,  
 f)  $C(O)NR^{10}$ ,  
 g)  $NR^{10}C(O)$ ,  
 20 h)  $OC(O)$ , and  
 i)  $C(O)O$ ;

$R^2$  is independently selected from

- 25
- a) hydrogen,  
 b) CN,  
 c)  $NO_2$ ,  
 d) halogen,  
 e) aryl, unsubstituted or substituted,  
 f) heterocycle, unsubstituted or substituted,  
 30 g)  $C_1-C_6$  alkyl, unsubstituted or substituted,  
 h)  $OR^{10}$ ,  
 i)  $N_3$ ,  
 j)  $R^{6a}S(O)_m$ ,  
 k)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,

- 5
- l)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
  - m)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
  - n)  $(R^{10})_2NC(O)NR^{10}-$ ,
  - o)  $R^{10}C(O)-$ ,
  - p)  $R^{10}C(O)NR^{10}-$ ,
  - q)  $R^{10}OC(O)-$ ,
  - r)  $-N(R^{10})_2$ , and
  - s)  $R^{10}OC(O)NR^{10}-$ ;

10  $R^3$  is independently selected from:

- 15
- a) hydrogen,
  - b) halo,
  - c)  $C_1-C_6$  alkyl, unsubstituted or substituted,
  - d) CN,
  - e)  $NO_2$ ,
  - f) aryl, unsubstituted or substituted,
  - g) heterocycle, unsubstituted or substituted,
  - h)  $OR^{10}$ ,
  - i)  $R^{6a}S(O)_m$ ,
  - 20 j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
  - k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
  - l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
  - m)  $(R^{10})_2NC(O)NR^{10}-$ ,
  - n)  $R^{10}C(O)-$ , and
  - 25 o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- 30
- a) hydrogen,
  - b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
  - c) aryl, unsubstituted or substituted,
  - d) heterocycle, unsubstituted or substituted, and
  - e) aralkyl, unsubstituted or substituted;

$R^6$  and  $R^7$  are independently selected from:

H, C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl, C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- 5
- a) C<sub>1</sub>-C<sub>6</sub> alkoxy,
  - b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,
  - c) halogen,
  - d) HO,

- 10
- g) —S(O)<sub>m</sub>R<sup>6a</sup>, and
  - h) N(R<sup>10</sup>)<sub>2</sub>; or

R<sup>6</sup> and R<sup>7</sup> may be joined in a ring;

R<sup>6a</sup> is independently selected from:

- 15
- a) C<sub>3</sub>-C<sub>6</sub> cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:
    - 1) C<sub>1</sub>-C<sub>4</sub> alkoxy,
    - 2) aryl or heterocycle,
    - 3) halogen,
    - 4) HO,
- 20

- 25
- b) C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted with one or more of the following:
    - 1) —C<sub>1</sub>-C<sub>4</sub> alkoxy,
    - 2) aryl or heterocycle,

3) halogen,

4) -OH,

and

6)  $-N(R^{10})_2$ ;

5

$R^8$  is independently selected from:

- a) hydrogen,
- b) unsubstituted or substituted  $C_1$ - $C_4$  perfluoroalkyl,
- c) halo,
- 10 d)  $R^{10}O-$ ,
- e)  $-C(O)NR^6R^7$ ,
- f)  $R^{10}C(O)NR^{10}-$ ,
- g)  $(R^{10})_2NC(O)NR^{10}-$ ,
- h)  $R^{10}C(O)-$ , and
- 15 i)  $C_1$ - $C_6$  alkyl, unsubstituted or substituted by  $C_1$ - $C_4$  perfluoroalkyl, F, Cl, Br,  $R^{10}O-$ ,  $R^{6a}S(O)_m-$ ,  $-C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}-$ , CN,  $(R^{10})_2NC(O)NR^{10}-$ ,  $R^{10}C(O)-$ ,  $R^{10}OC(O)-$ ,  $N_3$ ,  $-N(R^{10})_2$ , and  $R^{10}OC(O)NR^{10}-$ ;

20  $R^{10}$  is independently selected from:

- a) hydrogen,
- b) unsubstituted or substituted  $C_1$ - $C_6$  alkyl,
- c)  $C_3$ - $C_6$  cycloalkyl,
- d)  $C_1$ - $C_6$  perfluoroalkyl,
- 25 e) trifluoromethyl,
- f) 2,2,2-trifluoroethyl,
- g) unsubstituted or substituted heteroaryl,
- h) unsubstituted or substituted aryl,
- i) unsubstituted or substituted aralkyl, and
- 30 j) unsubstituted or substituted heteroaralkyl;

$R^{11}$  is independently selected from

- a) unsubstituted or substituted  $C_1$ - $C_6$  alkyl,

- b) unsubstituted or substituted aralkyl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted aryl; and
- e) unsubstituted or substituted heteroaralkyl;

5

$G^1$  and  $G^2$  are independently selected from  $CH_2$  or oxygen, provided at least one is oxygen;

J is  $CH_2$  or oxygen;

10

M is  $CH_2$ ,  $S(O)_m$  or oxygen;

W is a heterocycle selected from pyrrolidinyl, imidazolyl, pyridinyl, thiazolyl, pyridonyl, 2-oxopiperidinyl, indolyl, quinoliny, isoquinoliny, and thienyl;

15

m is 0, 1 or 2;

n is 0, 1, 2, 3, 4, 5 or 6;

p is 0, 1, 2, 3, 4, 5 or 6;

r is 0 to 5;

20

s is 0, 1, 2, 3 or 4;

t is 0, 1, 2, or 3;

w is 0, 1, or 2; and

z is 0 or 1;

25

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

5. The compound, according to Claim 1, of formula B:

wherein

$X^1$  is  $(CR^{1a})_n A^1 (CR^{1a})_n$ ;

5

$X^2$  is  $(CR^{1b})_p A^2 (CR^{1b})_p$ ;

$R^{1a}$  and  $R^{1b}$  are independently selected from:

- a) hydrogen,
- 10 b) unsubstituted or substituted aryl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted  $C_3$ - $C_{10}$  cycloalkyl,
- e)  $R^{10}O$ -,
- f)  $R^{6a}S(O)_m$ -,
- 15 g) unsubstituted or substituted  $C_2$ - $C_6$  alkenyl,
- h) unsubstituted or substituted  $C_2$ - $C_6$  alkynyl,
- i)  $-C(O)NR^6R^7$ ,
- j)  $R^{10}C(O)NR^{10}$ -,
- k)  $(R^{10})_2NC(O)NR^{10}$ -,
- 20 l)  $R^{10}C(O)$ -,
- m)  $-N(R^{10})_2$ ,
- n)  $R^{10}OC(O)$ -,
- o)  $R^{10}OC(O)NR^{10}$ -,
- p) unsubstituted or substituted  $C_1$ - $C_6$  alkyl, wherein the substituent

- 5 on the substituted  $C_1-C_6$  alkyl is selected from unsubstituted or substituted aryl, unsubstituted or substituted heterocycle, unsubstituted or substituted  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted  $C_2-C_6$  alkenyl, unsubstituted or substituted  $C_2-C_6$  alkynyl,  $R^{10}O-$ ,  $R^{6a}S(O)_m$ , halo,  $C(O)NR^6R^7$ ,  $R^{10}C(O)NR^{10}-$ ,  $(R^{10})_2NC(O)NR^{10}-$ ,  $R^{10}C(O)-$ ,  $-N(R^{10})_2$ ,  $R^{10}OC(O)-$ , and  $R^{10}OC(O)NR^{10}-$ ;

$A^1$  and  $A^2$  are independently selected from:

- 10 a) a bond,  
b) O,  
c) C=O,  
d)  $S(O)_m$ , and  
e)  $NR^{10}$ ;
- 15  $R^2$  is independently selected from
- 20 a) hydrogen,  
b) CN,  
c)  $NO_2$ ,  
d) halogen,  
e) aryl, unsubstituted or substituted,  
f) heterocycle, unsubstituted or substituted,  
g)  $C_1-C_6$  alkyl, unsubstituted or substituted,  
h)  $OR^{10}$ ,  
i)  $N_3$ ,
- 25 j)  $R^{6a}S(O)_m$ ,  
k)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,  
l)  $C_2-C_6$  alkenyl, unsubstituted or substituted,  
m)  $C_2-C_6$  alkynyl, unsubstituted or substituted,  
n)  $(R^{10})_2NC(O)NR^{10}-$ ,
- 30 o)  $R^{10}C(O)-$ ,  
p)  $R^{10}C(O)NR^{10}-$ ,  
q)  $R^{10}OC(O)-$ ,  
r)  $-N(R^{10})_2$ , and  
s)  $R^{10}OC(O)NR^{10}-$ ;

$R^3$  is independently selected from:

- a) hydrogen,
- b) halo,
- 5 c)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- d) CN,
- e)  $NO_2$ ,
- f) aryl, unsubstituted or substituted,
- g) heterocycle, unsubstituted or substituted,
- 10 h)  $OR^{10}$ ,
- i)  $R^{6a}S(O)_m$ ,
- j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
- k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
- l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
- 15 m)  $(R^{10})_2NC(O)NR^{10}-$ ,
- n)  $R^{10}C(O)-$ , and
- o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- 20 a) hydrogen,
- b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- c) aryl, unsubstituted or substituted,
- d) heterocycle, unsubstituted or substituted, and
- e) aralkyl, unsubstituted or substituted;

25

$R^6$  and  $R^7$  are independently selected from:

H,  $C_1-C_6$  alkyl,  $C_3-C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1-C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- 30 a)  $C_1-C_6$  alkoxy,
- b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,
- c) halogen,
- d) HO,

$\text{R}^6$  and  $\text{R}^7$  may be joined in a ring;

5

$\text{R}^{6a}$  is independently selected from:

a) C3-6 cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:

1) C1-4 alkoxy,

2) aryl or heterocycle,

3) halogen,

4) HO,

6)  $\text{SO}_2\text{R}^{11}$ ,

7)  $\text{N}(\text{R}^{10})_2$ ; and

b) C1-C6 alkyl, unsubstituted or substituted with one or more of the following:

1) -C1-4 alkoxy,

2) aryl or heterocycle,

3) halogen,

4) -OH,

and

6)  $-\text{N}(\text{R}^{10})_2$ ;

25  $\text{R}^8$  is independently selected from:

- 5
- a) hydrogen,
  - b) unsubstituted or substituted C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl,
  - c) halo,
  - d) R<sup>10</sup>O-, and
  - e) C<sub>1</sub>-C<sub>6</sub> alkyl, unsubstituted or substituted by C<sub>1</sub>-C<sub>4</sub> perfluoroalkyl, F, Cl, Br, R<sup>10</sup>O-, R<sup>6a</sup>S(O)<sub>m</sub>-, -C(O)NR<sup>6</sup>R<sup>7</sup>, R<sup>10</sup>C(O)NR<sup>10</sup>-, CN, (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-, R<sup>10</sup>C(O)-, R<sup>10</sup>OC(O)-, N<sub>3</sub>, -N(R<sup>10</sup>)<sub>2</sub>, and R<sup>10</sup>OC(O)NR<sup>10</sup>-;

10 R<sup>10</sup> is independently selected from:

- 15
- a) hydrogen,
  - b) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
  - c) C<sub>3</sub>-C<sub>6</sub> cycloalkyl,
  - d) C<sub>1</sub>-C<sub>6</sub> perfluoroalkyl,
  - e) trifluoromethyl,
  - f) 2,2,2-trifluoroethyl,
  - g) unsubstituted or substituted heteroaryl,
  - h) unsubstituted or substituted aryl,
  - i) unsubstituted or substituted aralkyl, and
  - 20 j) unsubstituted or substituted heteroaralkyl;

R<sup>11</sup> is independently selected from

- 25
- a) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
  - b) unsubstituted or substituted aralkyl,
  - c) unsubstituted or substituted heterocycle,
  - d) unsubstituted or substituted aryl, and
  - e) unsubstituted or substituted heteroaralkyl;

30 G<sup>1</sup> and G<sup>2</sup> are independently selected from CH<sub>2</sub> or oxygen, provided at least one is oxygen;

J is CH<sub>2</sub> or oxygen;

M is CH<sub>2</sub>, S(O)<sub>m</sub> or oxygen;

- 5 a) hydrogen,  
 b) unsubstituted or substituted aryl,  
 c) unsubstituted or substituted heterocycle,  
 d) unsubstituted or substituted C<sub>3</sub>-C<sub>10</sub> cycloalkyl,  
 e) R<sup>10</sup>O-,  
 f) R<sup>6a</sup>S(O)<sub>m</sub>-,  
 g) unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub> alkenyl,  
 h) unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub> alkynyl,  
 i) -C(O)NR<sup>6</sup>R<sup>7</sup>,  
 10 j) R<sup>10</sup>C(O)NR<sup>10</sup>-,  
 k) (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-,  
 l) R<sup>10</sup>C(O)-,  
 m) -N(R<sup>10</sup>)<sub>2</sub>,  
 n) R<sup>10</sup>OC(O)-,  
 15 o) R<sup>10</sup>OC(O)NR<sup>10</sup>-,  
 p) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl, wherein the substituent  
 on the substituted C<sub>1</sub>-C<sub>6</sub> alkyl is selected from unsubstituted or  
 substituted aryl, unsubstituted or substituted heterocycle, unsubstituted  
 or substituted C<sub>3</sub>-C<sub>10</sub> cycloalkyl, unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub>  
 20 alkenyl, unsubstituted or substituted C<sub>2</sub>-C<sub>6</sub> alkynyl, R<sup>10</sup>O-, R<sup>6a</sup>S(O)<sub>m</sub>,  
 halo, C(O)NR<sup>6</sup>R<sup>7</sup>, R<sup>10</sup>C(O)NR<sup>10</sup>-, (R<sup>10</sup>)<sub>2</sub>NC(O)NR<sup>10</sup>-, R<sup>10</sup>C(O)-,  
 -N(R<sup>10</sup>)<sub>2</sub>, R<sup>10</sup>OC(O)-, and R<sup>10</sup>OC(O)NR<sup>10</sup>-;

A<sup>1</sup> and A<sup>2</sup> are independently selected from:

- 25 a) a bond,  
 b) O,  
 c) C=O,  
 d) S(O)<sub>m</sub>, and  
 e) NR<sup>10</sup>,

30

R<sup>2</sup> is independently selected from

- a) hydrogen,  
 b) CN,  
 c) NO<sub>2</sub>,

- d) halogen,
- e) aryl, unsubstituted or substituted,
- f) heterocycle, unsubstituted or substituted,
- g)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- 5 h)  $OR^{10}$ ,
- i)  $N_3$ ,
- j)  $R^{6a}S(O)_m$ ,
- k)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
- l)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
- 10 m)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
- n)  $(R^{10})_2NC(O)NR^{10}-$ ,
- o)  $R^{10}C(O)-$ ,
- p)  $R^{10}C(O)NR^{10}-$ ,
- q)  $R^{10}OC(O)-$ ,
- 15 r)  $-N(R^{10})_2$ , and
- s)  $R^{10}OC(O)NR^{10}-$ ;

$R^3$  is independently selected from:

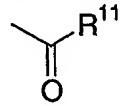

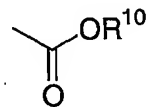

- a) hydrogen,
- 20 b) halo,
- c)  $C_1-C_6$  alkyl, unsubstituted or substituted;
- d) CN,
- e)  $NO_2$ ,
- f) aryl, unsubstituted or substituted,
- 25 g) heterocycle, unsubstituted or substituted,
- h)  $OR^{10}$ ,
- i)  $R^{6a}S(O)_m$ ,
- j)  $C_3-C_{10}$  cycloalkyl, unsubstituted or substituted,
- k)  $C_2-C_6$  alkenyl, unsubstituted or substituted,
- 30 l)  $C_2-C_6$  alkynyl, unsubstituted or substituted,
- m)  $(R^{10})_2NC(O)NR^{10}-$ ,
- n)  $R^{10}C(O)-$ , and
- o)  $R^{10}C(O)NR^{10}-$ ;

$R^4$  is independently selected from:

- a) hydrogen,
- b)  $C_1-C_6$  alkyl, unsubstituted or substituted,
- c) aryl, unsubstituted or substituted,
- 5 d) heterocycle, unsubstituted or substituted, and
- e) aralkyl, unsubstituted or substituted,

$R^6$  and  $R^7$  are independently selected from:

- 10 H,  $C_1-C_6$  alkyl,  $C_3-C_6$  cycloalkyl, heterocycle, aryl, aralkyl, aroyl, heteraroyl, arylsulfonyl, heteroarylsulfonyl,  $C_1-C_4$  perfluoroalkyl, unsubstituted or substituted with one or two substituents selected from:

- a)  $C_1-C_6$  alkoxy,
- b) substituted or unsubstituted aryl or substituted or unsubstituted heterocycle,
- 15 c) halogen,
- d) HO,
- e) 
- f) 
- g)  $-S(O)_m R^{6a}$ , and
- h)  $N(R^{10})_2$ ; or

20  $R^6$  and  $R^7$  may be joined in a ring;

$R^{6a}$  is independently selected from:

- a)  $C_3-6$  cycloalkyl, heterocycle, aryl, unsubstituted or substituted with one or more of the following:
- 25 1)  $C_1-4$  alkoxy,
- 2) aryl or heterocycle,
- 3) halogen,
- 4) HO,

b)  $\text{C}_1\text{-C}_6$  alkyl, unsubstituted or substituted with one or more of the following:

1)  $\text{-C}_{1-4}$  alkoxy,

2) aryl or heterocycle,

3) halogen,

4)  $\text{-OH}$ ,

and

$\text{R}^8$  is independently selected from:

a) hydrogen,

b) unsubstituted or substituted  $\text{C}_1\text{-C}_4$  perfluoroalkyl,

c) halo,

d)  $\text{R}^{10}\text{O-}$ , and

e)  $\text{C}_1\text{-C}_6$  alkyl, unsubstituted or substituted by  $\text{C}_1\text{-C}_4$  perfluoroalkyl, F,

$\text{Cl}$ ,  $\text{Br}$ ,  $\text{R}^{10}\text{O-}$ ,  $\text{R}^{6a}\text{S}(\text{O})_m$ ,  $\text{-C}(\text{O})\text{NR}^6\text{R}^7$ ,  $\text{R}^{10}\text{C}(\text{O})\text{NR}^{10-}$ ,  $\text{CN}$ ,

$(\text{R}^{10})_2\text{NC}(\text{O})\text{NR}^{10-}$ ,  $\text{R}^{10}\text{C}(\text{O})$ ,  $\text{R}^{10}\text{OC}(\text{O})$ ,  $\text{N}_3$ ,  $\text{-N}(\text{R}^{10})_2$ , and

$\text{R}^{10}\text{OC}(\text{O})\text{NR}^{10-}$ ;

$\text{R}^{10}$  is independently selected from:

a) hydrogen,

b) unsubstituted or substituted  $\text{C}_1\text{-C}_6$  alkyl,

c)  $\text{C}_3\text{-C}_6$  cycloalkyl,

d)  $\text{C}_1\text{-C}_6$  perfluoroalkyl,

e) trifluoromethyl,

f) 2,2,2-trifluoroethyl,

g) unsubstituted or substituted heteroaryl,

h) unsubstituted or substituted aryl,

- i) unsubstituted or substituted aralkyl, and
- j) unsubstituted or substituted heteroaralkyl;

R<sup>11</sup> is independently selected from

- 5 a) unsubstituted or substituted C<sub>1</sub>-C<sub>6</sub> alkyl,
- b) unsubstituted or substituted aralkyl,
- c) unsubstituted or substituted heterocycle,
- d) unsubstituted or substituted aryl, and
- 10 e) unsubstituted or substituted heteroaralkyl;

G<sup>1</sup> and G<sup>2</sup> are independently selected from CH<sub>2</sub> or oxygen, provided at least one is oxygen;

J is CH<sub>2</sub> or oxygen;

15 M is CH<sub>2</sub>, S(O)<sub>m</sub> or oxygen;

m is 0, 1 or 2;

n is 0, 1, 2, 3, 4, 5 or 6;

20 p is 0, 1, 2, 3, 4, 5 or 6;

r is 0 to 5;

s is 0, 1, 2, 3 or 4;

t is 0, 1, 2, or 3;

w is 0, 1, or 2; and

25 z is 0 or 1;

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

7. The compound according to Claim 1, selected from:

30

(+/-)-4-{4-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-ylmethyl)imidazol-1-ylmethyl}benzonitrile

(+/-)-4-{4-[2-(7-chloro-2,3-dihydro-spiro[4H-1-benzopyran-4,4'-imidazolidine]-2',5'-dion-3-yl)ethyl]-2-methylimidazol-1-ylmethyl} benzonitrile

5

(+/-)-4-{4-(5'-chloro-spiro[indan-1,5'-oxazolidine]-2-on-3-ylmethyl)imidazol-1-ylmethyl} benzonitrile

10

(+/-)-4-{4-(5'-fluoro-spiro[imidazolidine-4,1'-indan]-2,5-dion-3-ylmethyl)imidazol-1-ylmethyl} benzonitrile

or a pharmaceutically acceptable salt, hydrate, stereoisomer or optical isomer thereof.

5

8. A pharmaceutical composition comprising a pharmaceutical carrier, and dispersed therein, a therapeutically effective amount of a compound of Claim 1.

10

9. A pharmaceutical composition comprising a pharmaceutical carrier, and dispersed therein, a therapeutically effective amount of a compound of Claim 2.

15

10. A pharmaceutical composition comprising a pharmaceutical carrier, and dispersed therein, a therapeutically effective amount of a compound of Claim 3.

20

11. A pharmaceutical composition comprising a pharmaceutical carrier, and dispersed therein, a therapeutically effective amount of a compound of Claim 7.

25

12. A method for inhibiting farnesyl-protein transferase which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.

13. A method for inhibiting farnesyl-protein transferase which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 2.

14. A method for inhibiting farnesyl-protein transferase which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 3.
- 5 15. A method for inhibiting farnesyl-protein transferase which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 7.
- 10 16. A method for treating cancer which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.
- 15 17. A method for treating cancer which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 2.
- 20 18. A method for treating cancer which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 3.
- 25 19. A method for treating cancer which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 7.
- 30 20. A method for treating neurofibromen benign proliferative disorder which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.
21. A method for treating blindness related to retinal vascularization which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.

22. A method for treating infections from hepatitis delta and related viruses which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.
- 5 23. A method for preventing restenosis which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.
- 10 24. A method for treating polycystic kidney disease which comprises administering to a mammal in need thereof a therapeutically effective amount of a compound of Claim 1.
- 15 25. A pharmaceutical composition made by combining the compound of Claim 1 and a pharmaceutically acceptable carrier.
26. A process for making a pharmaceutical composition comprising combining a compound of Claim 1 and a pharmaceutically acceptable carrier.
- 20 27. A method of conferring radiation sensitivity on a tumor cell using a therapeutically effective amount of a compound of Claim 1 in combination with radiation therapy.
- 25 28. A method of treating cancer using a therapeutically effective amount of a compound of Claim 1 in combination with an antineoplastic.
29. A method according to Claim 28 wherein the antineoplastic is paclitaxel.

# INTERNATIONAL SEARCH REPORT

International application No.  
PCT/US00/34325

## A. CLASSIFICATION OF SUBJECT MATTER

IPC(7) : A61K 31/4025, 31/4178; C07D 209/54, 403/08  
US CL : 514/397, 409; 548/314.7, 411

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U.S. : 514/397, 409; 548/314.7, 411

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

STN CAS ONLINE

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 3,507,881 A (SANDBERG) 21 April 1970 (21/04/70), see entire document, especially Table 5, columns 7-10.	1, 2, 4, 5, 8, 9, 25, 26
X	US 4,925,841 A (BORENSTEIN ET AL.) 15 May 1990 (15/05/90), see entire document, especially Table I, columns 3-6.	1, 2, 4, 5, 8, 9, 25, 26
X	NEW et al. Buspirone analogs. 2. Structure-activity relationships of aromatic imide derivatives. J. Med. Chem. August 1986, Volume 29, Number 8, pages 1476-1482, especially Table I on page 1478.	1, 2, 8, 9, 25, 26

☒ Further documents are listed in the continuation of Box C. ☐ See patent family annex.

* Special categories of cited documents:	*T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
*A* document defining the general state of the art which is not considered to be of particular relevance	*X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
*E* earlier document published on or after the international filing date	*Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
*L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	*Z* document member of the same patent family
*O* document referring to an oral disclosure, use, exhibition or other means	
*P* document published prior to the international filing date but later than the priority date claimed	

Date of the actual completion of the international search

# INTERNATIONAL SEARCH REPORT

International application No.  
PCT/US00/34325

## Box I - Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:
  
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
  
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

Please See Extra Sheet.

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
  
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:  
1, 2, 4-6, 8, 9, 12, 13, 25 and 26 (in part)

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.  
☐ No protest accompanied the payment of additional search fees.

## BOX II. OBSERVATIONS WHERE UNITY OF INVENTION WAS LACKING

This ISA found multiple inventions as follows:

- Group I, claim(s) 1, 2, 4-6, 8, 9, 12, 13, 25 and 26, drawn to products of formula A-1 wherein J is CH<sub>2</sub> and M is CH<sub>2</sub>, a process and a method of use.
- Group II, claim(s) 1, 2, 8, 9, 12, 13, 25 and 26, drawn to products of formula A-1 wherein J is CH<sub>2</sub> and M is NH, a process and a method of use.
- Group III, claim(s) 1, 2, 4-6, 8, 9, 12, 13, 25 and 26, drawn to products of formula A-1 wherein J is CH<sub>2</sub> and M is S(O)<sub>m</sub>, a process and a method of use.
- Group IV, claim(s) 1, 2, 4-6, 8, 9, 12, 13, 25 and 26, drawn to products of formula A-1 wherein J is CH<sub>2</sub> and M is O, a process and a method of use.
- Group V, claim(s) 1-3, 7-15, 25 and 26, drawn to products of formula A-1 wherein J is NH and M is CH<sub>2</sub>, a process and a method of use.
- Group VI, claim(s) 1, 2, 8, 9, 12, 13, 25 and 26, drawn to products of formula A-1 wherein J is NH and M is NH, a process and a method of use.
- Group VII, claim(s) 1-3, 8-10, 12-14, 25 and 26, drawn to products of formula A-1 wherein J is NH and M is S(O)<sub>m</sub>, a process and a method of use.
- Group VIII, claim(s) 1-3, 7-15, 25 and 26, drawn to products of formula A-1 wherein J is NH and M is O, a process and a method of use.
- Group IX, claim(s) 1-15, 25 and 26, drawn to products of formula A-1 wherein J is O and M is CH<sub>2</sub>, a process and a method of use.
- Group X, claim(s) 1, 2, 8, 9, 12, 13, 25 and 26, drawn to products of formula A-1 wherein J is O and M is NH, a process and a method of use.
- Group XI, claim(s) 1-6, 8-10, 12-14, 25 and 26, drawn to products of formula A-1 wherein J is O and M is S(O)<sub>m</sub>, a process and a method of use.
- Group XII, claim(s) 1-6, 8-10, 12-14, 25 and 26, drawn to products of formula A-1 wherein J is O and M is O, a process and a method of use.
- Group XIII, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is CH<sub>2</sub>.
- Group XIV, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is NH.
- Group XV, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is S(O)<sub>m</sub>.
- Group XVI, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is O.
- Group XVII, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is NH and M is CH<sub>2</sub>.
- Group XVIII, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is NH and M is NH.
- Group XIX, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is NH and M is S(O)<sub>m</sub>.
- Group XX, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is NH and M is O.
- Group XXI, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is O and M is CH<sub>2</sub>.
- Group XXII, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is O and M is NH.
- Group XXIII, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is O and M is S(O)<sub>m</sub>.
- Group XXIV, claim(s) 16-19, 28 and 29, drawn to a method of using a product of formula A-1 wherein J is O and M is O.
- Group XXV, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is CH<sub>2</sub>.
- Group XXVI, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is NH.
- Group XXVII, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is S(O)<sub>m</sub>.
- Group XXVIII, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is CH<sub>2</sub> and M is O.
- Group XXIX, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is NH and M is CH<sub>2</sub>.
- Group XXX, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is NH and M is NH.
- Group XXXI, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is NH and M is S(O)<sub>m</sub>.
- Group XXXII, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is NH and M is O.
- Group XXXIII, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is O and M is CH<sub>2</sub>.
- Group XXXIV, claim(s) 20, drawn to a method of using a product of formula A-1 wherein J is O and M is NH.

PCT/US00/34325

Form PCT/ISA/210 (extra sheet) (July 1998) ★

## INTERNATIONAL SEARCH REPORT

International application No.

PCT/US00/34325

Group XCVI, claim(s) 27, drawn to a method of using a product of formula A-1 wherein J is O and M is O.

The inventions listed as Groups I-XCVI do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: there is a lack of unity among the above identified groups because there is no significant structural element shared by all of the alternatives. Each of groups I-XII set forth above represent a separate discrete heterocyclic ring system which one skilled in the art, which beside sharing no significant structural element, cannot be said to belong to a recognized class of chemical compounds in the pharmaceutical art. Groups I-XII, besides directed to products, are also directed to a process and a method of use. Further, groups XIII-XCVI are drawn to various methods of using the heterocyclic ring systems claimed in claim 1. The claims are therefore considered to lack unity of invention.
